

Supplementary Figure 1: A schematic diagram demonstrating the relationship between the STRATAA and TyVAC cohorts, and their recruitment from Ndirande and Zingwanga. TyVAC recruited from both Ndirande and Zingwanga, while STRATAA only recruited from Ndirande. All TyVAC participants from Ndirande were also enrolled in STRATAA. TyVAC participants from Ndirande were only those enrolled in the typhoid conjugate vaccine study, while all residents were eligible for enrollment in STRATAA (assuming they met the fever criteria etc).

Supplementary Figure 2: STROBE diagram of blood cultures done, *S. Typhi* isolated and *S. Typhi* sequenced as part of the STRATAA and TyVAC studies

Supplementary Figure 3: The number of patients with sequenced and unsequenced *S. Typhi* isolates across the recruitment period

Supplementary Figure 4: Monthly prescriptions of 7 antibiotics to STRATAA participants
