Primary screening route

The figure below is a graphic depiction of the primary screening route. The 753 documents subjected to the first screening were not recorded on a data extraction sheet.

The primary screening included the following:

Does the title (or abstract, where applicable) contain terms like “kangaroo mother care”, “kangaroo care” or “skin-to-skin care”? YES / NO

If YES: **Go directly to the secondary screening**

If NO: Do further screening

- Language that the consultant understands? YES / NO
 - If YES: Continue below
 - If NO: Is it possible to do a Google translation of the title and table of contents? YES / NO
 - If YES: Do translation of title, table of contents and search terms and continue below
 - If NO: Consult with WHO for assistance OR eliminate from further screening and analysis
- Scan the table of contents: Any reference to preterm / low birthweight or KMC? YES / NO
 - If YES: Consult the relevant section(s) of the document
 - If NO: Do a word search for the following terms: “preterm”, “prematu*”, “low birth weight”, “low birthweight”, “LBW”, “kangaroo”, “KMC”

- Apply screening questions for the total document:
 - Did the search with the above search terms yield any hits? YES / NO
 - If NO: Discard document
 - If YES: KMC discussed apart from one-sentence mentions as method of care for small babies? YES / NO
 - If NO: Discard document
 - If YES: Continue with secondary screening**
