

Supplemental Figure Legends

Supplemental figure 1. Consort diagram of the CARDAMON Trial. A consort diagram of the CARDAMON trial, all numbers are as intention to treat. Data correct at time of publication of Primary end point of the trial.

Supplemental figure 2. Whole Exome Sequencing summary of the CARDAMON Trial. **A)** Number of reads annotating each mutation type call called by MUTECT2. **B)** Frequency of variant type called by MUTECT2 **C)** Base mutation change frequency **D)** Number of mutations detected per patient X axis, colour denotes type of mutation called by MUTECT2. **E)** Variant classification summary **F)** the top 10 genes mutated in patients in the CARDAMON trial. **G)** Heatmap showing presence or absence of top 30 most frequently mutated genes. Rows genes, columns are patients. Grey = no mutation detected for that patient.
