124

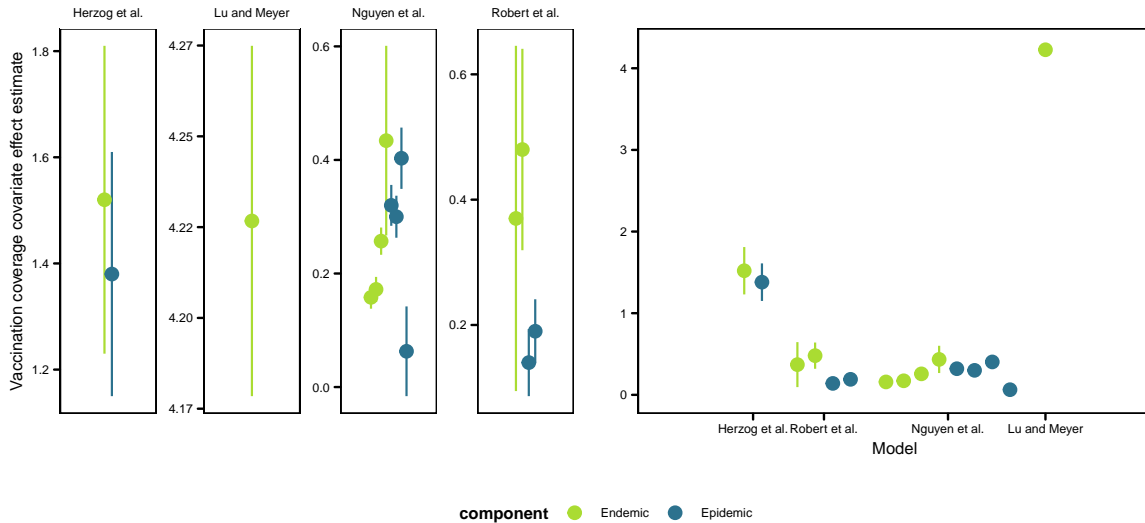

125 We correct the vaccination coverage for waning as described in Bekker-Nielsen Dun-
 126 bar and Held [1]. The waning function is multiplied to each time point. This is achieved
 127 using a triangle matrix. For each age and canton combination at each day we sum up the
 128 entries for that day as well as the waned entries for previous days. We then divide by the
 129 population.

130 **6 Cases**

131

132 **7 Measles literature**

133

134 8 Predicted cases

135 Distribution of predicted cases for the model with vaccination coverage in the en-
 136 demic component under the original and alternative vaccination coverage option for regions
 137 (above) and age groups (below)

138

139

140 **8.1 Summed across prediction window**

141 Final size estimates based on path forecasts (regional model)
