

Table S1: Glossary of terms

Health Information System (HIS)	<i>An “integrated effort to collect, process, report and use health information and knowledge to influence policy-making, programme action and research”.</i>
Health Management Information System (HMIS)	<i>“A system of service-generated data derived from facilities and patient–provider interactions covering aspects such as care offered, quality of care and treatments administered” as part of the HIS.</i>
District Health Information System 2 (DHIS2)	The web-based software platform to collect, access and analyze data as the electronic part of HMIS in Tanzania.
Facility registers	Paper-based registers as part of the HMIS for manual data collection on service provision for individual clients in all departments of a health facility including maternal health care. Individual data is summarized daily in paper-based tally sheets.
Facility summary reports	Paper-based forms as part of the HMIS to summarize monthly data on each client per department including maternal health care.
SPT forms	Paper-based forms as part of SPT system for manual data collection on service provision for individual clients using a unique identifier. One form is completed for each client-provider encounter using the same identifier for an individual client. The equivalent for HMIS at facility level is the individual data entry in a row of the facility register .
Electronic SPT summary reports	Electronic monthly summary of SPT data collected from each facility accessible on the SPT dashboard. The equivalent for HMIS is the electronic report for each facility in DHIS2 .
