Kelty et al. (2017)	Fatal and non-fatal opioid overdose in opioid dependent patients treated with methadone, buprenorphine or implant naltrexone	No direct comparison between buprenorphine and methadone
Kelty et al. (2018)	Morbidity and mortality in opioid dependent patients after entering an opioid pharmacotherapy compared with a cohort of non-dependent controls	No direct comparison between buprenorphine and methadone
Kimber et al. (2015)	Mortality risk of opioid substitution therapy with methadone versus buprenorphine: A retrospective cohort study	Included
Krawczyk et al. (2020)	Opioid agonist treatment and fatal overdose risk in a state-wide US population receiving opioid use disorder services	No direct comparison between buprenorphine and methadone
Krawczyk et al. (2020)	Opioid agonist treatment is highly protective against overdose death among a U.S. statewide population of justice-involved adults	No direct comparison between buprenorphine and methadone
Larney et al. (2014)	Opioid substitution therapy as a strategy to reduce deaths in prison: retrospective cohort study	No direct comparison between buprenorphine and methadone
Larney et al. (2023)	Does opioid agonist treatment reduce overdose mortality risk in people who are older or have physical comorbidities? Cohort study using linked administrative health data in New South Wales, Australia, 2002–17	Included
Larochelle et al. (2018)	Medication for Opioid Use Disorder After Nonfatal Opioid Overdose and Association with Mortality A Cohort Study	No direct comparison between buprenorphine and methadone
Lev et al. (2015)	Methadone related deaths compared to all prescription related deaths	No measure of association calculated
Lewer et al. (2020)	Life expectancy of people who are dependent on opioids: A cohort study in New South Wales, Australia	Outcome outside the scope of study
Lim et al. (2022)	Association between jail-based methadone or buprenorphine treatment for opioid use disorder and overdose mortality after release from New York City jails 2011-2017	No direct comparison between buprenorphine and methadone
Lin et al. (2019)	Changing Trends in Opioid Overdose Deaths and Prescription Opioid Receipt Among Veterans	No direct comparison between buprenorphine and methadone

Marsden et al. (2017)	Does exposure to opioid substitution treatment in prison reduce the risk of death after release? A national prospective observational study in England	No direct comparison between buprenorphine and methadone
Marteau et al. (2015)	The relative risk of fatal poisoning by methadone or buprenorphine within the wider population of England and Wales	Included
Megarbane et al. (2010)	Prospective comparative assessment of buprenorphine overdose with heroin and methadone: Clinical characteristics and response to antidotal treatment	No measure of association calculated
Mintz et al. (2022)	Associations between Stimulant Prescriptions and Drug-related Poisoning Risk among Persons Receiving Buprenorphine Treatment for Opioid Use Disorder	No direct comparison between buprenorphine and methadone
Morgan et al. (2020)	Comparison of Rates of Overdose and Hospitalization After Initiation of Medication for Opioid Use Disorder in the Inpatient vs Outpatient Setting	Outcome outside the scope of study
Moe et al. (2021)	Death after emergency department visits for opioid overdose in British Columbia: a retrospective cohort analysis	Outcome outside the scope of study
Pearce et al. (2020)	Opioid agonist treatment and risk of mortality during opioid overdose public health emergency: Population based retrospective cohort study	No direct comparison between buprenorphine and methadone
Pierce et al. (2016)	Impact of treatment for opioid dependence on fatal drug-related poisoning: a national cohort study in England	No direct comparison between buprenorphine and methadone
Qeadan et al. (2022)	Epidemiological trends in opioid-only and opioid/polysubstance- related death rates among American Indian/Alaska Native populations from 1999 to 2019: a retrospective longitudinal ecological study	No measure of association calculated
Rezza et al. (1992)	Estimating the trend of the epidemic of drug use in Italy, 1985-89	No measure of association calculated
Shastry et al. (2022)	Prior use of medications for opioid use disorder in ED patients with opioid overdose: prevalence, misuse and overdose severity	No direct comparison between buprenorphine and methadone
Skeie et al. (2022)	Mortality, Causes of Death, and Predictors of Death among Patients On and Off Opioid Agonist Treatment: Results from a 19-Year Cohort Study	No direct comparison between buprenorphine and methadone
Soyka et al. (2006)	One-year mortality rates of patients receiving methadone and buprenorphine maintenance therapy - A nationally representative cohort study in 2694 patients	No measure of association calculated
Soyka et al. (2006)	Fatal poisoning in methadone and buprenorphine treated patients - Are there differences?	No measure of association calculated
Sun et al. (2022)	Evaluation of the Effectiveness of Buprenorphine-Naloxone on Opioid Overdose and Death among Insured Patients with Opioid Use Disorder in the United States	No direct comparison between buprenorphine and methadone
Thylstrup et al. (2020)	Incidence and predictors of drug overdoses among a cohort of >10,000 patients treated for substance use disorder	No direct comparison between buprenorphine and methadone
Vakkalanka et al. (2021)	Association between buprenorphine for opioid use disorder and mortality risk	No direct comparison between buprenorphine and methadone
Victor et al. (2021)	Buprenorphine Treatment Intake and Critical Encounters following a Nonfatal Opioid Overdose	No direct comparison between buprenorphine and methadone
Wakeman et al. (2020)	Comparative Effectiveness of Different Treatment Pathways for Opioid Use Disorder	No direct comparison between buprenorphine and methadone

Walley et al. (2019)	The Contribution of Prescribed and Illicit Opioids to Fatal Overdoses in Massachusetts, 2013-2015	No measure of association calculated
Walley et al. (2020)	Association between mortality rates and medication and residential treatment after in-patient medically managed opioid withdrawal: a cohort analysis	No direct comparison between buprenorphine and methadone
Wikner et al. (2014)	Opioid-related mortality and filled prescriptions for buprenorphine and methadone	No measure of association calculated
Wysowski (2007)	Surveillance of prescription drug-related mortality using death certificate data	No measure of association calculated
Zador et al. (2000)	Deaths in methadone maintenance treatment in New South Wales, Australia 1990-1995	No measure of association calculated

Variable	Description
First_author	Last name of the first author
Journal	Journal where the article was published
Publication_year	Year in which the article was published
	Study Characteristics
Study_design	Study design (e.g., cohort study, or case-control study)
Setting	Country
Study_period	Study period
Data_source	Data source
Mean_fup_duration	Mean follow-up duration
Follow_up	Patient follow-up and censoring definition
Exposure_def	Exposure definition (e.g., intention-to-treat, as-treated, and time-varying)
Outcome_def	Outcome definition (e.g., ICD-9/10, DSM-IV, etc.)
Eligibility	Key inclusion and exclusion criteria
N_total	Total number of patients
N_bup	Number and % of treatment episodes with buprenorphine
N_met	Number and % of treatment episodes with methadone
	Patient Characteristics at Baseline
Mean_age	Mean age of patients
Male	% of male patients
Psychiatric	% of patients with any or specific psychiatric or mental health disorders
	Effect Measures and Corresponding 95% CI
Exposure_group	Exposure group
Reference_group	Reference group
Outcome	Specific outcome investigated
Occasion	Effect measure during maintenance treatment, after treatment discontinuation, or overall
N_deaths_bup	Number of buprenorphine-related deaths
PY_bup	Person-years for the buprenorphine group
N_deaths_met	Number of methadone-related deaths
PY_met	Person-years for the methadone group
Model	Statistical model employed
Confounders	Confounders included in the regression model
Confounding_ctrl	Techniques employed to control for confounding
Effect_measure	Type of effect measure reported (HR, OR, or IRR)
Estimate	Adjusted estimate of association
LCI95	Lower limit of the 95% CI
UCI95	Upper limit of the 95% CI

Bias due to confounding							
1.1. Is there potential for confounding of the effect of intervention in this study?	РҮ	Y	РҮ	РҮ	Y	РҮ	Y
1.2. Was the analysis based on splitting participants' follow up time according to intervention received? (If N/PN, go to 1.4-1.6; If Y/PY, go to 1.3)	N	Ν	Y	Y	Y	Y	N
1.3. Were intervention discontinuations or switches likely to be related to factors that are prognostic for the outcome? <i>Questions relating to BL confounding only</i>	NA	NA	PN	PN	PN	PN	NA
1.4. Did the authors use an appropriate analysis method that controlled for all the important confounding domains?	Y	Ν	РҮ	РҮ	PN	Y	Ν
1.5. If Y/PY to 1.4: Were confounding domains that were controlled for measured validly and reliably by the variables available in this study?	РҮ	NA	РҮ	РҮ	РҮ	РҮ	NA
1.6. Did the authors control for any post- intervention variables that could have been affected by the intervention? <i>Questions relating to BL and time-varying</i>	N	N	Ν	Ν	Ν	Ν	Ν
1.7. Did the authors use an appropriate analysis method that controlled for all the important confounding domains and for time- varying confounding?	N	Ν	PN	PN	PN	РҮ	Ν
1.8. If Y/PY to 1.7: Were confounding domains that were controlled for measured validly and reliably by the variables available in this study?	NA	NA	NA	NA	NA	РҮ	NA
Bias in selection of participants in the							
2.1. Was selection of participants into the study (or into the analysis) based on participant characteristics observed after the start of intervention? If N/PN to 2.1, go to 2.4:	N	N	N	N	N	N	N
2.2. If Y/PY to 2.1: Were the post- intervention variables that influenced selection likely to be associated with intervention?	NA						
2.3. If Y/PY to 2.2: Were the post- intervention variables that influenced selection likely to be influenced by the outcome or a cause of the outcome?	NA						
2.4. Do start of follow-up and start of intervention coincide for most participants?	Ν	Ν	PY	РҮ	PY	PY	Ν
2.5. If Y/PY to 2.2 and 2.3, or N/PN to 2.4: Were adjustment techniques used that are likely to correct for the presence of	Ν	Ν	NA	NA	NA	NA	Ν
selection biases?							
Blas in classification of interventions
