

Supplemental Figure 9

Supplemental Figure 9. Clonality of $\gamma\delta$ T cell.

UMAP visualization of clonal $\gamma\delta$ T cells from healthy volunteers before (first panel) and after (second panel) receiving the BNT162b2 mRNA vaccine and booster (third panel), and COVID-19 patients (fourth panel).

Clonality is determined by the CDR3 sequence in TCR δ chain. Identical CDR3 sequences in at least 5 cells are colored uniquely.
