

The Impact of the UK COVID-19 Lockdown on the Screening, Diagnostics and Incidence of Breast, Colorectal, Lung and Prostate Cancer in the UK: a Population-Based Cohort Study

Nicola L Barclay, Marta Pineda Moncusi, Annika M. Jödicke, Daniel Prieto-Alhambra, Berta Raventós, Danielle Newby, Antonella Delmestri, Wai Yi Man, Xihang Chen, Marti Català.

Supplementary Tables and Figures

Table S1. Screening and Diagnostic Tests Examined in Characterisations and Incidence Analyses	
Screening/ Diagnostic Test	Incidence Cohort
<i>Breast</i>	
Referral to breast clinic	Breast cancer referrals
Referral to mammography clinic	Breast cancer referrals
Fast track referral for suspected breast cancer	Breast cancer referrals
Referral to breast surgeon	Breast cancer referrals
Screening mammograms	Mammograms
Seen in breast clinic	Seen in breast clinic
Diagnostic mammograms	Mammograms
Diagnostic mammograms with ultrasound	Mammograms
Biopsy of breast	Biopsy of Breast
Stereotactically guided needle biopsy of breast	Biopsy of Breast
Percutaneous needle biopsy of breast	Biopsy of Breast
Fine needle aspiration of breast	Biopsy of Breast
Wire guided local excision of breast	Biopsy of Breast
Excision of mammary duct	Biopsy of Breast
Wide local excision of breast	Biopsy of Breast
Excision of breast tissue	Biopsy of Breast
Seen by breast surgeon	Seen by breast surgeon
<i>Colorectal</i>	
Colorectal cancer screening programme	Colorectal cancer screening programme
Fast-track referral for suspected colorectal cancer	Colorectal cancer referrals
Quantitative faecal immunochemical test	/
Ultrasonography of intestine	/
Colonoscopy	Colonoscopy
Sigmoidoscopy	Sigmoidoscopy
Ultrasound of gastrointestinal tract	/
Ultrasonography of abdomen	/
Ultrasonography of rectum	/
<i>Lung</i>	
Fast track referral for suspected lung cancer	Lung cancer referrals
Bronchoscopy	Bronchoscopy
Endobronchial ultrasonography guided transbronchial needle aspiration	Diagnostic procedures of chest
Mediastinoscopy	Diagnostic procedures of chest
CT and biopsy of chest	Diagnostic procedures of chest
Ultrasound and biopsy of chest	Diagnostic procedures of chest
Diagnostic radiology procedures of chest	Diagnostic procedures of chest
<i>Prostate</i>	
Prostate specific antigen (PSA) test	Prostate specific antigen (PSA) test
PSA monitoring	/
Biopsy of prostate	Biopsy of prostate

Note. / = Tests/measurements/procedures that did not have sufficient counts in the CPRD GOLD database were not included in the incidence analyses.

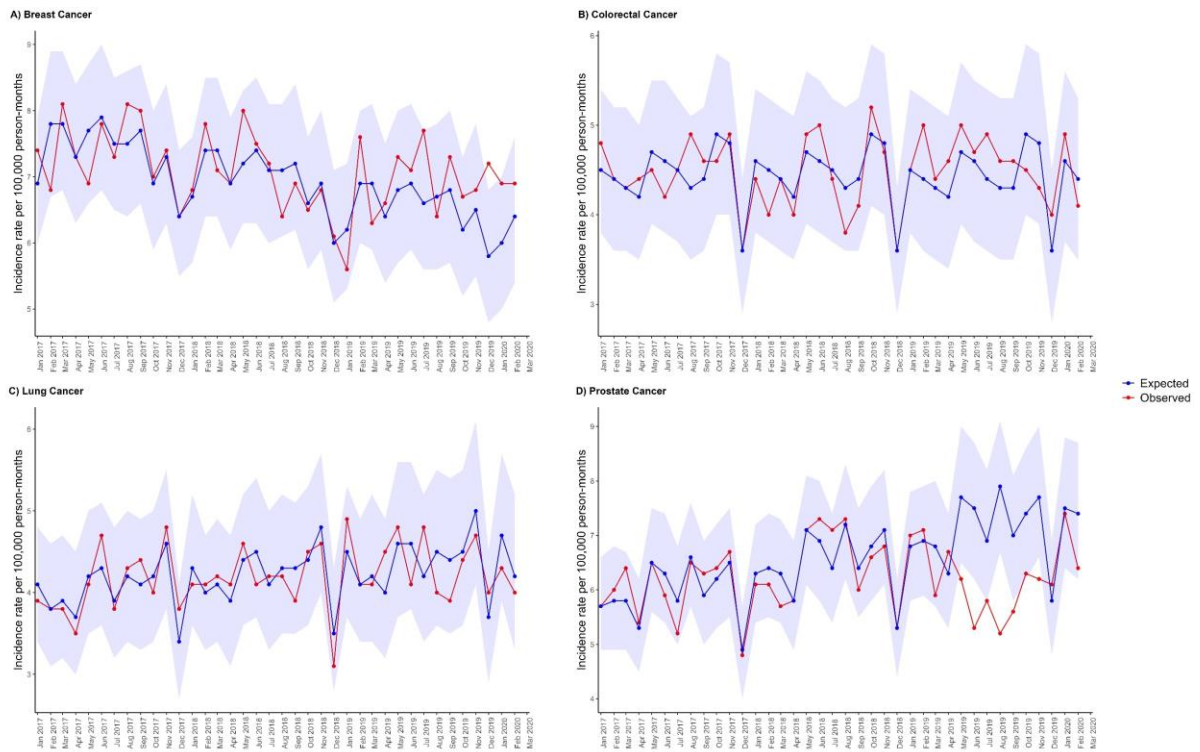

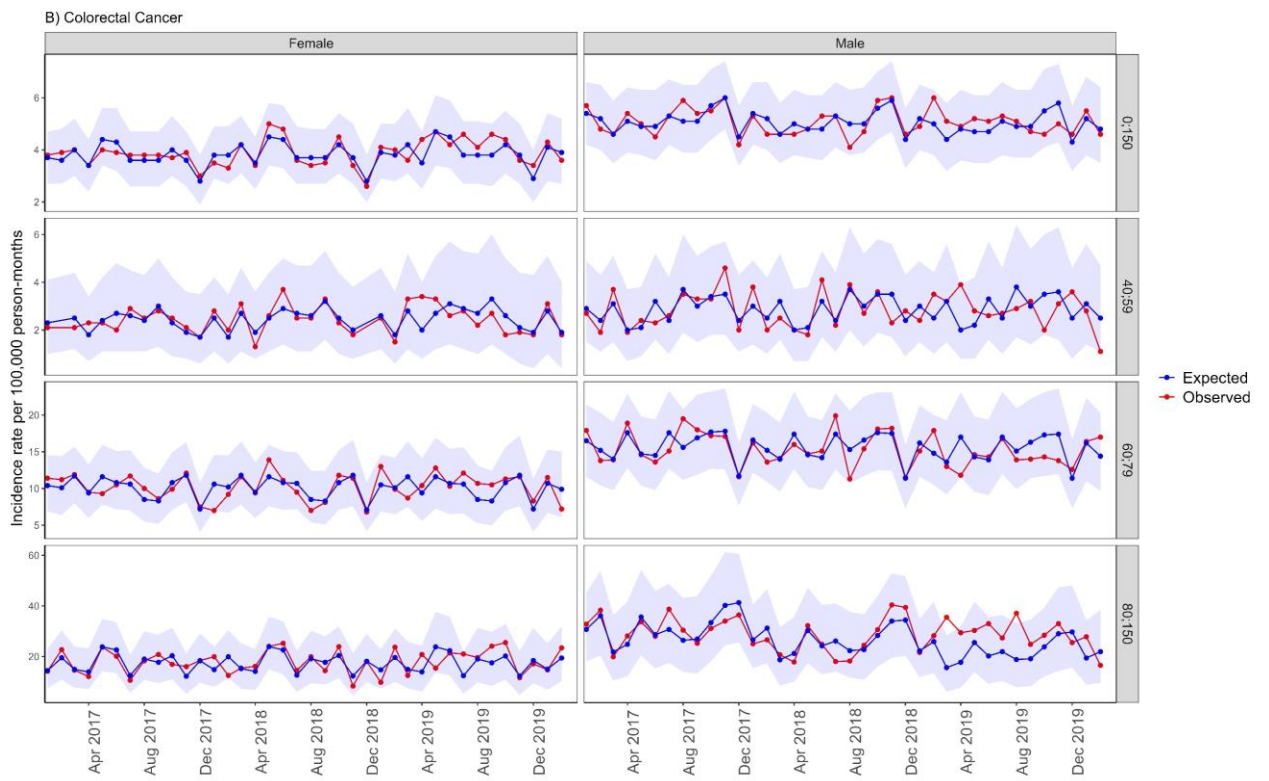

Figure S1. Expected and observed incidence rates per 100,000 person months of A) breast cancer, B) colorectal cancer, C) lung cancer, and D) prostate cancer in primary care records from CPRD UK, from the validation model. Note. Points represent monthly incidence rates. Expected rates (with 95% prediction intervals) were calculated using negative binomial regression using observed data from January 2017 to February 2020 to estimate expected counts during the same period to validate the methodology. The shaded areas represent the 95% prediction intervals.

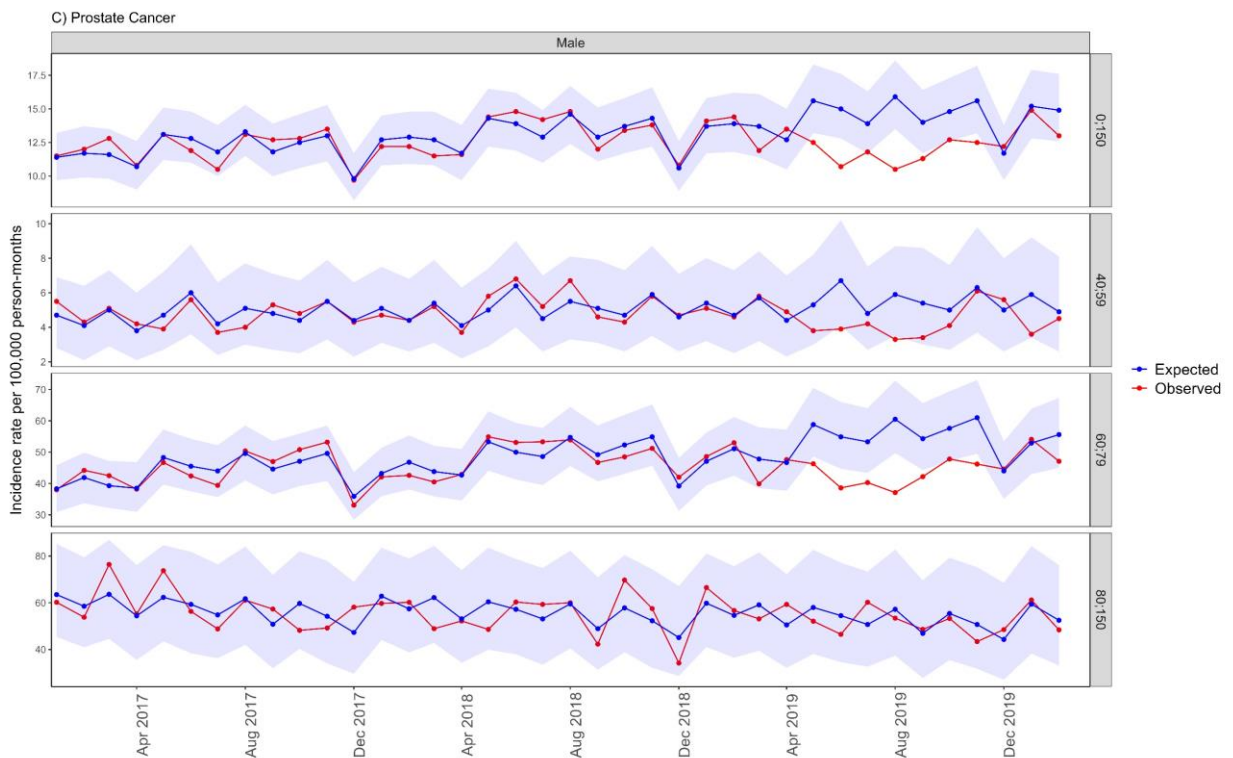

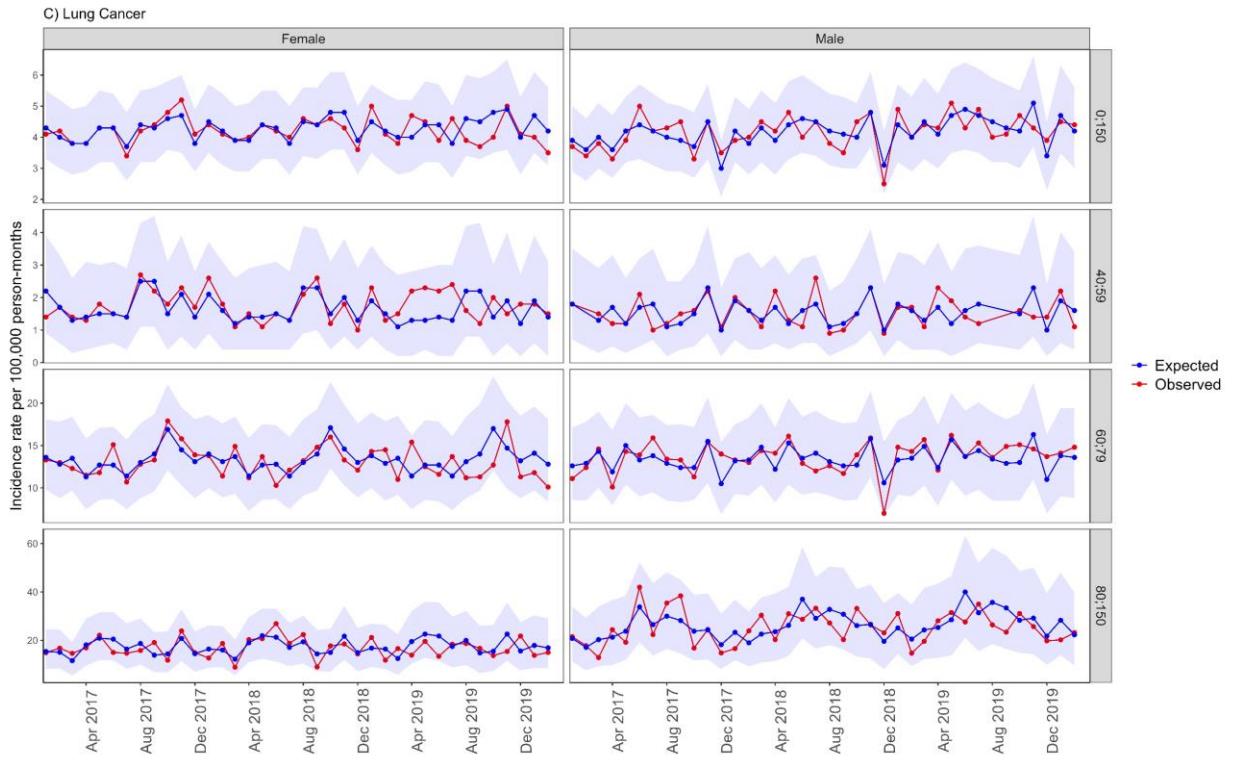

Figure S2. Expected and observed incidence rates per 100,000 person months of A) breast cancer, B) colorectal cancer, C) lung cancer, and D) prostate cancer in primary care records from CPRD UK, after lockdown, stratified by age and sex, from the validation model. Note. Points represent monthly incidence rates. Expected rates (with 95% prediction intervals) were calculated using negative binomial regression using observed data from January 2017 to February 2020 to estimate expected counts during the same period to validate the methodology. The shaded areas represent the 95% prediction intervals.

Table S2. Source population starting counts, final counts after applying excision criteria, and reasons for exclusion

Denominator count (n)	Reason for exclusion	Excluded (n)
16,958,587	Starting population	NA
16,958,587	Missing year of birth	0
16,958,587	Missing sex	0
16,958,587	Cannot satisfy age criteria during the study period based on year of birth	0
5,694,486	No observation time available during study period (January 2017 to December 2021)	11,264,101
5,694,486	Doesn't satisfy age criteria during the study period	0
5,191,650	Prior history requirement not fulfilled during study period	502,836
5,191,268	Excluded due to prior breast cancer diagnosis (do not pass outcome washout during study period)	382
5,191,291	Excluded due to prior colorectal cancer diagnosis (do not pass outcome washout during study period)	359
5,191,131	Excluded due to prior lung cancer diagnosis (do not pass outcome washout during study period)	519
5,191,367	Excluded due to prior prostate cancer diagnosis (do not pass outcome washout during study period)	283

Table S3. Proportion of source population in different age groups for those enrolled in CPRD GOLD before, during and after lockdown

Age Group	Proportion Pre-pandemic (Jan 2017-Feb 2020)	Proportion During Lockdown (March 2020-June 2020)	Proportion After lockdown (July 2020-Dec 2021)
0 to 9 years	24.45%	24.91%	24.46%
10 to 19 years	9.38%	9.09%	8.99%
20 to 29 years	15.09%	14.49%	15.71%
30 to 39 years	17.24%	17.46%	17.57%
40 to 49 years	13.16%	13.79%	13.38%
50 to 59 years	10.04%	10.54%	10.25%
60 to 69 years	6.41%	6.38%	6.2%
70 to 79 years	2.85%	2.44%	2.43%
80 to 89 years	1.07%	0.73%	0.79%
90 to 99 years	0.3%	0.16%	0.2%
100+ years	0.01%	0.01%	0.01%

Note. Counts before applying exclusion criteria

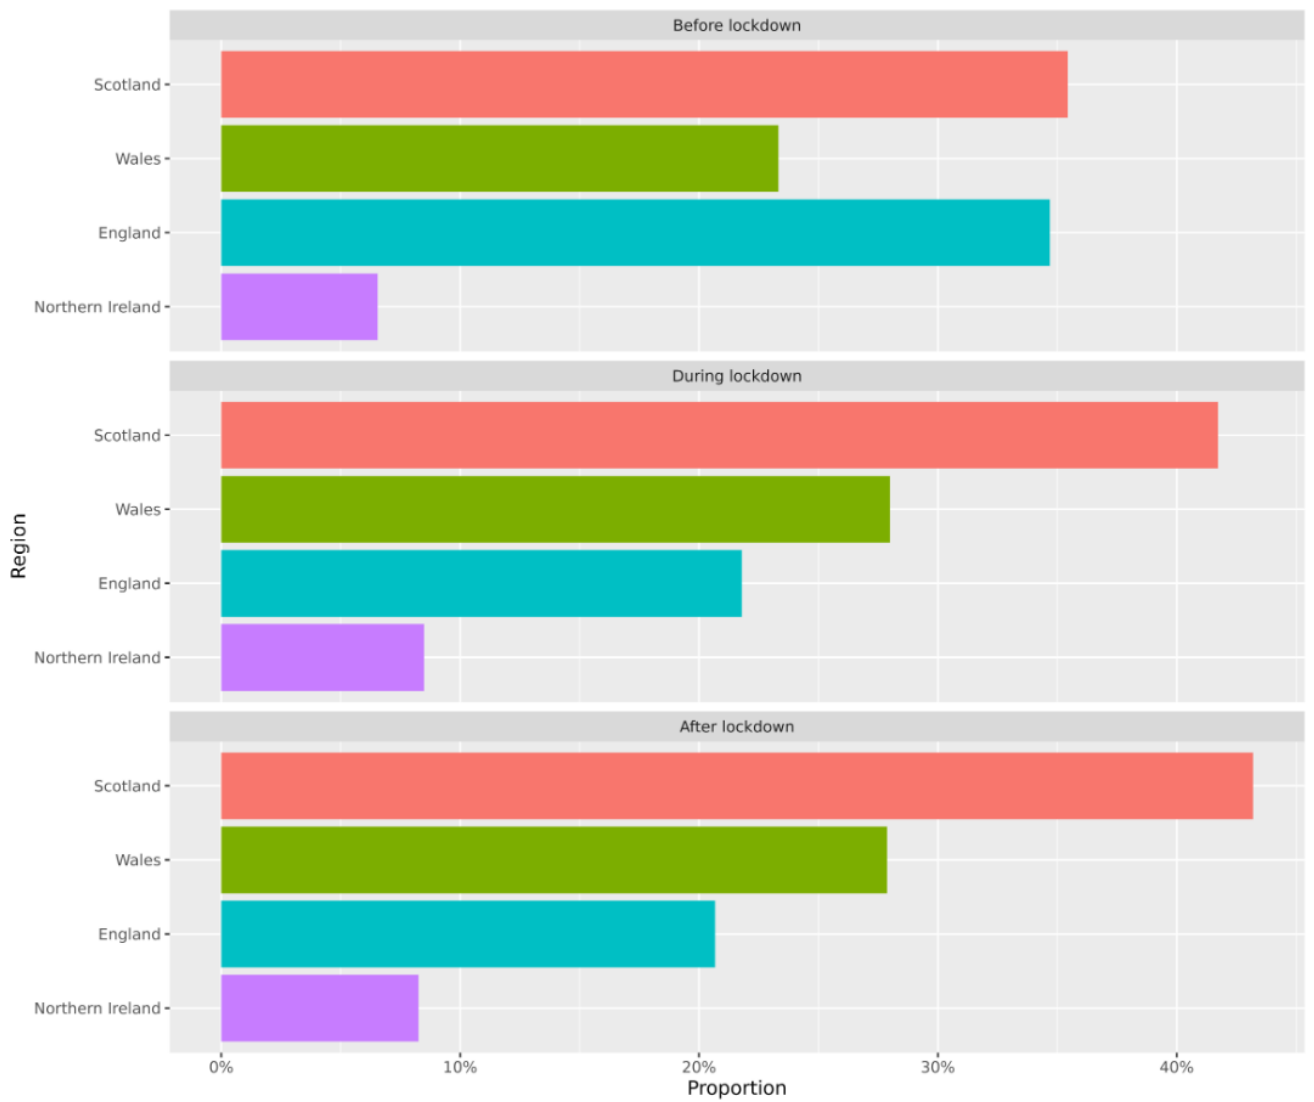

Figure S3. Proportion of source population observed in each region of the UK in the CPRD GOLD, for those enrolled before, during and after lockdown

Table S4. Counts of healthcare visits, screening and diagnostic procedures, before, during and after lockdown (including descendant concepts) in the denominator population

Screening/Diagnostic Test	N Pre-pandemic (Jan 2017-Feb 2020)	N During Lockdown (March 2020-June 2020)	N After lockdown (July 2020-Dec 2021)
Visits in the healthcare system	184,471,700	12,108,287	74,106,599
<i>Breast</i>			
Referral to Breast clinic	31,079	1571	10,535
Referral to mammography clinic	1634	64	515
Fasttrack referral for suspected breast cancer	13,203	707	4277
Referral to breast surgeon	21,443	1014	7489
Seen in breast clinic	106,697	4114	28,463
Seen by breast surgeon	4427	116	332
Diagnostic mammograms	1139	14	124
Screening mammography	2295	78	160
Diagnostic mammogram and ultrasound	264,009	2561	46,480
Biopsy of breast	4906	293	1987
Stereotactically guided core needle biopsy of breast	1483	70	539
Percutaneous needle biopsy of breast	1555	71	556
Fine needle aspiration of breast	586	43	201
Wire guided local excision of breast lump	218	7	52
Excision of mammary duct	223	6	45
Wide local excision of breast lesion	3247	215	1038
Excision of lesion of breast	4888	275	1484
Excision of breast tissue	9652	511	2810
<i>Colorectal</i>			
Fast track referral for suspected colorectal cancer	7977	472	2954
Bowel cancer screening programme	10,172	275	3554
Quantitative faecal immunochemical tests	12	0	23
Screening colonoscopy	0	0	0
Colonoscopies	340	<5	81

Table S4. Counts of healthcare visits, screening and diagnostic procedures, before, during and after lockdown (including descendant concepts) in the denominator population

Screening/Diagnostic Test	N Pre-pandemic (Jan 2017-Feb 2020)	N During Lockdown (March 2020-June 2020)	N After lockdown (July 2020-Dec 2021)
Ultrasonography of intestine	0	0	0
Endoscopic ultrasound of upper gastrointestinal tract	124	<5	15
Ultrasound of gastrointestinal tract	124	<5	15
Ultrasonography of abdomen	18,303	532	4989
Ultrasonography of rectum	0	0	0
Sigmoidoscopy	234	<5	57
<i>Lung</i>			
Fast track referral for suspected lung cancer	2105	79	547
Bronchoscopy	133	5	22
Endobronchial ultrasonography guided transbronchial needle aspiration	0	0	0
Mediastinoscopy	106	5	23
Mediastinoscopy - inspection only	33	<5	12
CT and biopsy of chest	0	0	0
US scan and biopsy of chest	0	0	0
Diagnostic Radiology (Diagnostic Imaging) Procedures of the Chest	0	0	0
MRI of chest	394	19	110
<i>Prostate</i>			
PSA monitoring	2920	139	825
Prostate specific antigen measurement	521,564	21,683	177,358
PSA (prostate-specific antigen) level measurement	1055	24	219
Biopsy of prostate	3269	155	1052
Open biopsy of prostate	114	9	46

Note. Counts <5 masked to maintain patient confidentiality.

Table S5. Counts of healthcare visits, screening/ diagnostic tests and referrals, occurring in the month, ≤6 months, and >6 months prior to diagnosis date, for breast cancer patients diagnosed before, during and after lockdown

Screening/diagnostic test	Time window prior to diagnosis date	N Pre-pandemic (8,815)	N During Lockdown (459)	N After Lockdown (2,900)
Biopsy of breast	1 to 30 days	550	45	268
	31 to 180 days	87	5	37
	180+ days	335	14	113
Diagnostic mammogram & ultrasound	1 to 30 days	921	35	288
	31 to 180 days	397	14	79
	180+ days	12,161	663	3,876
Diagnostic mammograms	1 to 30 days	13	<5	<5
	31 to 180 days	5	0	<5
	180+ days	54	<5	13
Excision of breast tissue	1 to 30 days	206	10	62
	31 to 180 days	74	5	25
	180+ days	333	18	101
Excision of lesion of breast	1 to 30 days	153	6	41
	31 to 180 days	48	<5	16
	180+ days	227	11	57
Excision of mammary duct	1 to 30 days	<5	0	<5
	31 to 180 days	<5	0	0
	180+ days	23	<5	13
Fasttrack referral for suspected breast cancer	1 to 30 days	349	30	94
	31 to 180 days	182	10	74
	180+ days	87	8	22
Fine needle aspiration of breast	1 to 30 days	25	<5	13
	31 to 180 days	5	0	<5
	180+ days	100	<5	20
Percutaneous needle biopsy of breast	1 to 30 days	255	18	108
	31 to 180 days	36	<5	10

Table S5. Counts of healthcare visits, screening/ diagnostic tests and referrals, occurring in the month, ≤6 months, and >6 months prior to diagnosis date, for breast cancer patients diagnosed before, during and after lockdown

Screening/diagnostic test	Time window prior to diagnosis date	N Pre-pandemic (8,815)	N During Lockdown (459)	N After Lockdown (2,900)
Referral to breast clinic	180+ days	58	<5	21
	1 to 30 days	490	36	161
	31 to 180 days	419	25	185
Referral to breast surgeon	180+ days	559	28	228
	1 to 30 days	360	33	103
	31 to 180 days	295	13	120
Referral to mammography clinic	180+ days	290	26	110
	1 to 30 days	27	<5	11
	31 to 180 days	29	<5	11
Screening mammography	180+ days	56	<5	8
	1 to 30 days	12	0	0
	31 to 180 days	9	0	0
Seen by breast surgeon	180+ days	118	<5	9
	1 to 30 days	125	9	18
	31 to 180 days	37	5	<5
Seen in breast clinic	180+ days	59	<5	21
	1 to 30 days	2,437	129	663
	31 to 180 days	596	36	196
Stereotactically guided core needle biopsy	180+ days	2,056	115	705
	1 to 30 days	252	17	108
	31 to 180 days	36	<5	10
Visits within healthcare system	180+ days	56	0	19
	1 to 30 days	32,146	1,798	11,123
	31 to 180 days	87,799	4,389	30,649
Wide local excision of breast lesion	180+ days	2,340,878	126,691	827,739
	1 to 30 days	111	<5	31

Table S5. Counts of healthcare visits, screening/ diagnostic tests and referrals, occurring in the month, ≤6 months, and >6 months prior to diagnosis date, for breast cancer patients diagnosed before, during and after lockdown

Screening/diagnostic test	Time window prior to diagnosis date	N Pre-pandemic (8,815)	N During Lockdown (459)	N After Lockdown (2,900)
	31 to 180 days	34	<5	8
	180+ days	31	0	<5
Wire guided local excision of breast lump	1 to 30 days	10	<5	<5
	31 to 180 days	<5	0	<5
	180+ days	<5	0	<5

Note. Pre-pandemic = Jan 2017-Feb 2020; During Lockdown = March 2020-June 2020; After lockdown = July 2020-Dec 2021. Counts <5 masked to maintain patient confidentiality.

Table S6. Counts of healthcare visits, screening and diagnostic procedures, occurring in the month, 6 months, and 6 months+, for colorectal cancer patients diagnosed before, during and after lockdown (including descendant concepts)

Screening/diagnostic test	Time window prior to index date	N Pre-pandemic (6,025)	N During Lockdown (349)	N After Lockdown (2,234)
Bowel cancer screening programme	1 to 30 days	14	0	<5
	31 to 180 days	38	<5	7
	180+ days	360	19	104
Colonoscopies	1 to 30 days	<5	0	0
	31 to 180 days	<5	0	<5
	180+ days	8	0	<5
Visits within healthcare system	1 to 30 days	28,556	1,722	11,472
	31 to 180 days	85,288	4,532	32,678
	180+ days	1,751,840	105,839	705,013

Note. Pre-pandemic = Jan 2017-Feb 2020; During Lockdown = March 2020-June 2020; After lockdown = July 2020-Dec 2021. There were no results for the following screening/diagnostic tests across these time-periods: Endoscopic ultrasound of upper gastrointestinal tract; Fast track referral for suspected colorectal cancer; Quantitative faecal immunochemical tests; Screening colonoscopies; Sigmoidoscopy; Ultrasonography of abdomen; Ultrasonography of intestine; Ultrasonography of rectum; Ultrasound of gastrointestinal tract. Counts <5 masked to maintain patient confidentiality.

Table S7. Counts of healthcare visits, screening and diagnostic procedures, occurring in the month, 6 months, and 6 months+, for lung cancer patients diagnosed before, during and after lockdown (including descendant concepts)

Screening/diagnostic test	Time window prior to index date	N Pre-pandemic (5,766)	N During Lockdown (435)	N After Lockdown (2,102)
Bronchoscopy	1 to 30 days	0	<5	<5
	31 to 180 days	<5	0	0
	180+ days	<5	0	<5
Mediastinoscopy	1 to 30 days	<5	0	0
	31 to 180 days	<5	0	0
	180+ days	<5	0	<5
Visits within healthcare system	1 to 30 days	35,816	2,811	13,483
	31 to 180 days	98,896	7,452	35,804
	180+ days	2,056,404	164,494	825,358

Note. Pre-pandemic = Jan 2017-Feb 2020; During Lockdown = March 2020-June 2020; After lockdown = July 2020-Dec 2021. There were no results for the following screening/diagnostic tests across these time-periods: CT and biopsy of chest; Diagnostic Radiology (Diagnostic Imaging) Procedures of the Chest; Endobronchial ultrasonography guided transbronchial needle aspiration; Fast track referral for lung cancer; MRI of chest; US scan and biopsy of chest. Counts < masked to maintain patient confidentiality.

Table S8. Counts of healthcare visits, screening and diagnostic procedures, occurring in the month, 6 months, and 6 months+, for prostate cancer patients diagnosed before, during and after lockdown (including descendant concepts)

Screening/diagnostic test	Time window prior to index date	N Pre-pandemic (8,103)	N during lockdown (427)	N after lockdown (4,277)
Visits within healthcare system	1 to 30 days	32,686	1,734	10,956
	31 to 180 days	118,353	6,358	38,489
	180+ days	2,125,748	120,351	716,009

Note. Pre-pandemic = Jan 2017-Feb 2020; During Lockdown = March 2020-June 2020; After lockdown = July 2020-Dec 2021. There were no results for the following screening/diagnostic tests across these time-periods: Biopsy of prostate; Open biopsy of prostate; PSA monitoring; Prostate specific antigen measurement – level; Prostate specific antigen measurement.

Table S9. Characterisation of breast cancer patients diagnosed before, during and after lockdown

Characteristic	Pre-pandemic	During Lockdown	After Lockdown	Standardised Mean Differences	
	Count (% of n=8,815)	Count (% of n=459)	Count (% of n=2,900)	Before vs. during lockdown	Before vs. after lockdown
Medical history: General					
Acute respiratory disease	374 (4.2)	15 (3.3)	46 (1.6)	-0.05	-0.16
Attention deficit hyperactivity disorder	<5 (~0)	0 (0)	0 (0)	-0.02	-0.02
Chronic liver disease	12 (0.1)	0 (0)	5 (0.2)	-0.05	0.01
Chronic obstructive lung disease	112 (1.3)	<5 (~0)	26 (0.9)	-0.12	-0.04
Crohn's disease	<5 (~0)	0 (0)	<5 (~0)	-0.03	0.00
Dementia	29 (0.3)	<5 (~0)	13 (0.4)	0.02	0.02
Depressive disorder	102 (1.2)	5 (1.1)	19 (0.7)	-0.01	-0.05
Diabetes mellitus	89 (1)	<5 (~0)	33 (1.1)	-0.10	0.01
Gastroesophageal reflux disease	27 (0.3)	<5 (~0)	11 (0.4)	0.02	0.01
Gastrointestinal hemorrhage	60 (0.7)	<5 (~1)	11 (0.4)	0.02	-0.04
Hyperlipidemia	43 (0.5)	<5 (~0)	<5 (0.1)	-0.05	-0.06
Hypertensive disorder	141 (1.6)	5 (1.1)	44 (1.5)	-0.04	-0.01
Lesion of liver	29 (0.3)	0 (0)	12 (0.4)	-0.08	0.01
Obesity	18 (0.2)	<5 (~0)	<5 (~0)	0.00	-0.02
Osteoarthritis	195 (2.2)	6 (1.3)	39 (1.3)	-0.07	-0.07
Pneumonia	39 (0.4)	<5 (~0)	13 (0.4)	-0.04	0.00
Psoriasis	47 (0.5)	<5 (~1)	9 (0.3)	0.02	-0.03
Renal impairment	100 (1.1)	5 (1.1)	31 (1.1)	0.00	-0.01

Table S9. Characterisation of breast cancer patients diagnosed before, during and after lockdown

Characteristic	Pre-pandemic	During Lockdown	After Lockdown	Standardised Mean Differences	
	Count (% of n=8,815)	Count (% of n=459)	Count (% of n=2,900)	Before vs. during lockdown	Before vs. after lockdown

Prostate	5,203	16,300	5,117	1,533	2,289	2,375	4,987	21,525

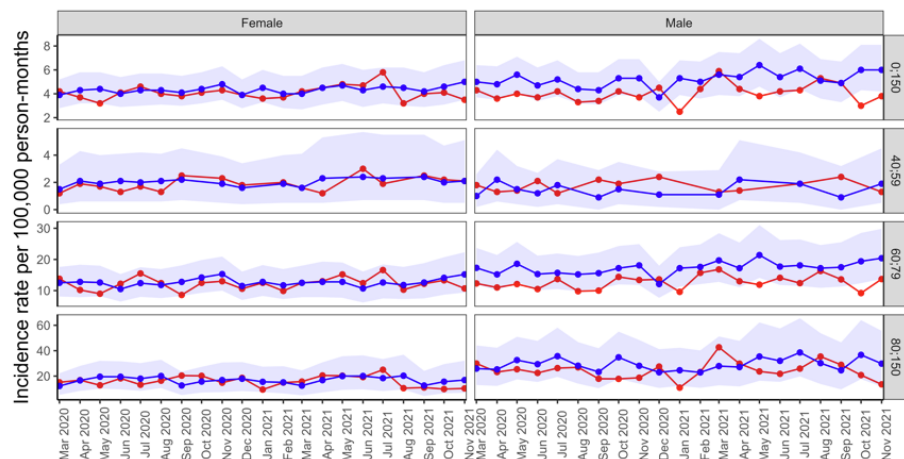

A) Breast Cancer

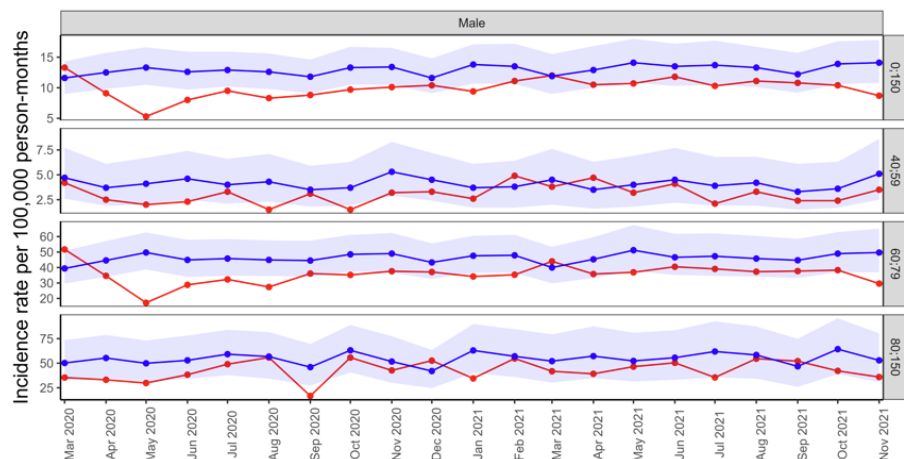

B) Colorectal Cancer

C) Lung Cancer

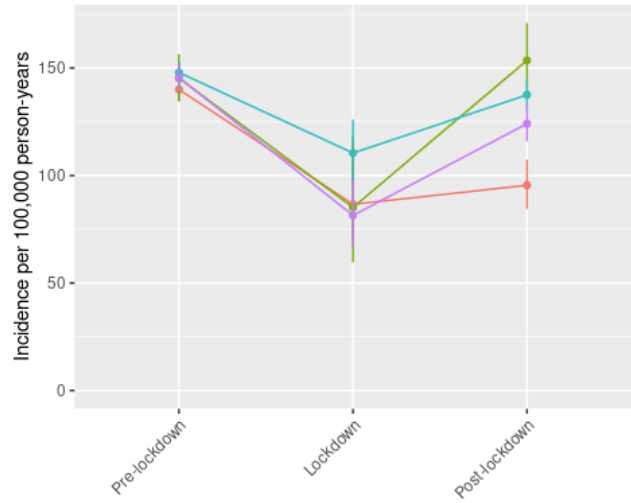

D) Prostate Cancer

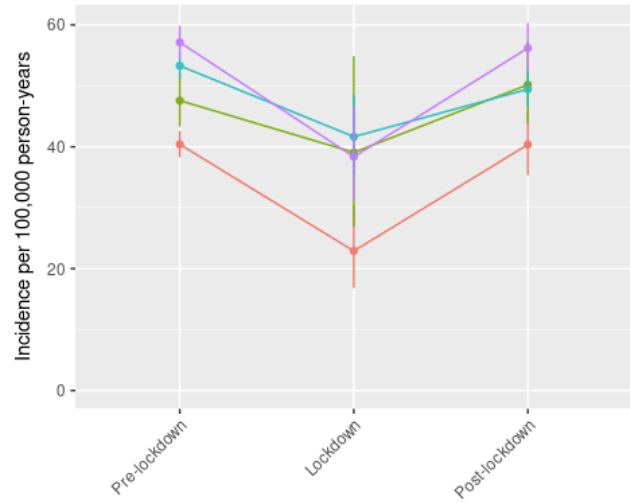

● Expected
● Observed

Figure S10. Expected and observed incidence rates per 100,000 person months of A) breast cancer, B) colorectal cancer, C) lung cancer, and D) prostate cancer in primary care records from CPRD GOLD UK, after lockdown, stratified by age and sex. Points represent monthly incidence rates. Expected rates (with 95% prediction intervals represented by shaded areas) were calculated using negative binomial regression using observed data from January 2017 to February 2020 to estimate expected counts from March 2020 to November 2021.

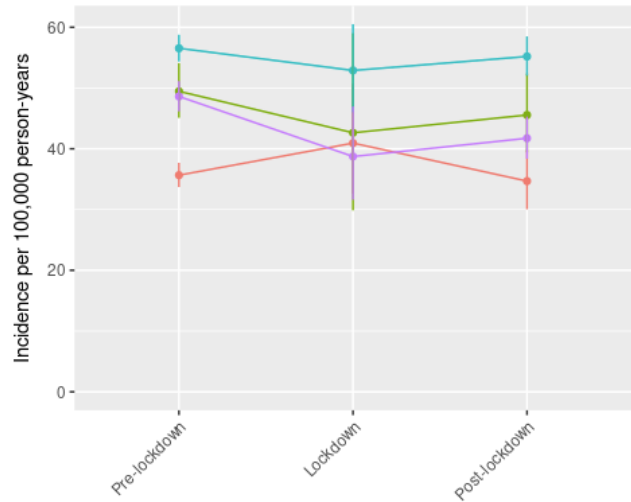

A) Breast Cancer

B) Colorectal Cancer

C) Lung Cancer

D) Prostate Cancer

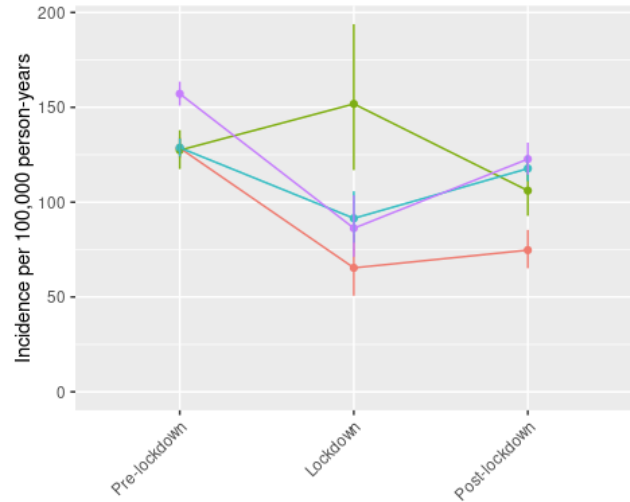

Figure S11. Incidence Rates per 100,000 Person-Years (with 95% confidence intervals) of Cancer Diagnoses in Months Before and After COVID-19 Lockdown (red dashed line) Stratified by UK Region

Table S26. Estimated percentage reduction, and estimated underdiagnoses (missed counts) (with 95% confidence intervals) for breast cancer across the extended lockdown periods from the negative binomial modelling, stratified by age and sex

Sex/Age Group	Parameter	Lockdown (March 2020-June 2020)	Post-lockdown (July 2020-Dec 2021)	Post-lockdown 1 (July 2020-Oct 2020)	Second lockdown (Nov 2020-Dec 2020)	Third lockdown (Jan 2021-Feb 2021)	Easing of restrictions (March 2021-June 2021)	Legal restrictions removed (July 2021-Dec 2021)	Total (March 2020-Dec 2021)
Female: 20;39	Percent reduction	23.2% (-140 to 64)	42.6% (-63 to 73.3)	47.4% (-37.5 to 72.5)	19.9% (-130 to 61.7)	51.9% (-16.7 to 75)	38.2% (-106.2 to 74.2)	50.7% (-36 to 77.3)	39.1% (-76.1 to 71.6)
