

Supplemental Table 3a. Correlations between chronological age (CA) and ECs in Sample B^a

Aging constructs	CA	Hannum EC	Horvath EC	Levine EC	GrimAge	POA
CA	1					
Hannum EC	0.81	1				
Horvath EC	0.73	0.77	1			
Levine EC	0.73	0.75	0.65	1		
GrimAge	0.83	0.76	0.65	0.74	1	
POA	0.03	0.12	0.10	0.20	0.38	1

^aSample B includes 3,387 participants who had data on ECs.

Supplemental Table 3b. Correlations between CA and age acceleration (abbreviated as Accel) for ECs in Sample B^a

Aging constructs	CA	HannumAccel	HorvathAccel	LevineAccel	GrimAgeAccel	POA ^b
CA	1					
HannumAccel	0	1				
HorvathAccel	0	0.43	1			
LevineAccel	0	0.40	0.26	1		
GrimAgeAccel	0	0.25	0.10	0.34	1	
POA	0.03	0.16	0.12	0.25	0.63	1

^aSample B includes 3,387 participants who had data on ECs.

^bWe did not calculate age acceleration for POA because it was not correlated with CA.
