Supplementary Note. FinnGen DF9 Ethics statement

Patients and control subjects in FinnGen provided informed consent for biobank research, based on the Finnish Biobank Act. Alternatively, separate research cohorts, collected prior the Finnish Biobank Act came into effect (in September 2013) and start of FinnGen (August 2017), were collected based on study-specific consents and later transferred to the Finnish biobanks after approval by Fimea (Finnish Medicines Agency), the National Supervisory Authority for Welfare and Health. Recruitment protocols followed the biobank protocols approved by Fimea. The Coordinating Ethics Committee of the Hospital District of Helsinki and Uusimaa (HUS) statement number for the FinnGen study is Nr HUS/990/2017.

The FinnGen study is approved by Finnish Institute for Health and Welfare (permit numbers: THL/2031/6.02.00/2017, THL/1101/5.05.00/2017, THL/341/6.02.00/2018, THL/2222/6.02.00/2018, THL/283/6.02.00/2019, THL/1721/5.05.00/2019 and THL/1524/5.05.00/2020), Digital and population data service agency (permit numbers: VRK43431/2017-3, VRK/6909/2018-3, VRK/4415/2019-3), the Social Insurance Institution (permit numbers: KELA 58/522/2017, KELA 131/522/2018, KELA 70/522/2019, KELA 98/522/2019, KELA 134/522/2019, KELA 138/522/2019, KELA 2/522/2020, KELA 16/522/2020), Findata permit numbers THL/2364/14.02/2020, THL/4055/14.06.00/2020,,THL/3433/14.06.00/2020, THL/4432/14.06/2020, THL/5189/14.06/2020, THL/5894/14.06.00/2020, THL/6619/14.06.00/2020, THL/209/14.06.00/2021, THL/688/14.06.00/2021, THL/1284/14.06.00/2021, THL/1965/14.06.00/2021, THL/5546/14.02.00/2020, THL/2658/14.06.00/2021, THL/4235/14.06.00/202, Statistics Finland (permit numbers: TK-53-1041-17 and TK/143/07.03.00/2020 (earlier TK-53-90-20) TK/1735/07.03.00/2021, TK/3112/07.03.00/2021) and Finnish Registry for Kidney Diseases permission/extract from the meeting minutes on 4th July 2019.

The Biobank Access Decisions for FinnGen samples and data utilized in FinnGen Data Freeze 9 include: THL Biobank BB2017_55, BB2017_111, BB2018_19, BB_2018_34, BB_2018_67, BB2018_71, BB2019_7, BB2019_8, BB2019_26, BB2020_1, Finnish Red Cross Blood Service Biobank 7.12.2017, Helsinki Biobank HUS/359/2017, HUS/248/2020, Auria Biobank AB17-5154 and amendment #1 (August 17 2020), AB20-5926 and amendment #1 (April 23 2020) and it's modification (Sep 22 2021), Biobank Borealis of Northern Finland_2017_1013, Biobank of Eastern Finland 1186/2018 and amendment 22 § /2020, Finnish Clinical Biobank Tampere MH0004 and amendments (21.02.2020 & 06.10.2020), Central Finland Biobank 1-2017, and Terveystalo Biobank STB 2018001 and amendment 25th Aug 2020.

Fig. S1.1 Regional association plot of novel LDH association on chromosome 1 limited to the area of 21059185-22059185. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *ALPL* (alkaline phosphatase, biomineralization associated).

Fig. S1.2 Regional association plot of novel LDH association on chromosome 1 limited to the area of 114810363-115810363. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *NGF* (nerve growth factor).

Fig. S1.3 Regional association plot of novel LDH association on chromosome 1 limited to the area of 218424545-219424545. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *TGFB2* (*transforming growth factor beta 2*).

Fig. S1.4 Regional association plot of novel LDH association on chromosome 1 limited to the area of 222041797-223041797. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *HHIPL2* (*HHIP like 2*).

Fig. S1.5 Regional association plot of novel LDH association on chromosome 2 limited to the area of 205637590-206637590. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *GPR1* (*G-protein coupled receptor 1*), also known as *CMKFR2* (*chemerin like receptor 2*).

Fig. S1.6 Regional association plot of novel LDH association on chromosome 3 limited to the area of 49880254-50880254. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *HYAL2* (*hyaluronidase 2*).

Fig. S1.7 Regional association plot of novel LDH association on chromosome 3 limited to the area of 72700973-73700973. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *PDZRN3* (*PDZ domain containing ring finger 3*).

Fig. S1.8 Regional association plot of novel LDH association on chromosome 3 limited to the area of 123068959-124068959. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *ADCY5* (*adenylate cyclase 5*).

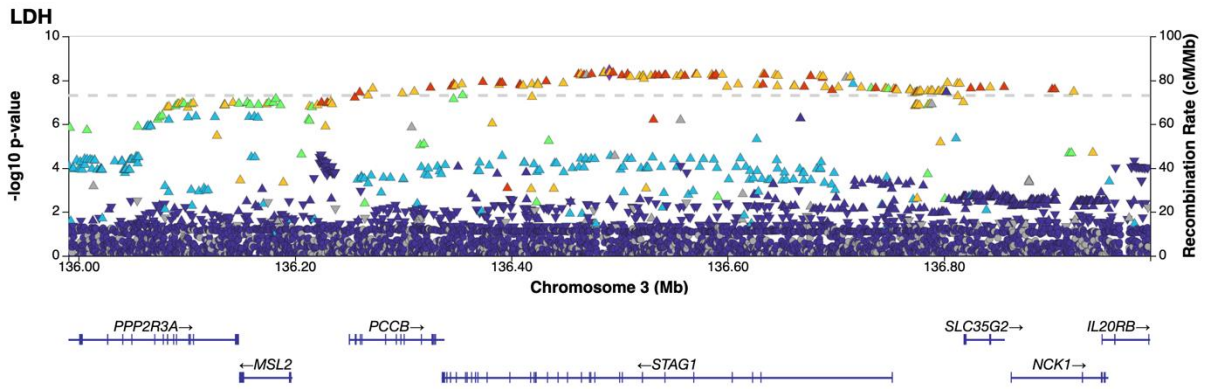

Fig. S1.9 Regional association plot of novel LDH association on chromosome 3 limited to the area of 135990708-136990708. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *NCK1* (*NCK adaptor protein 1*).

Fig. S1.10 Regional association plot of novel LDH association on chromosome 3 limited to the area of 157978549-158978549. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *SHOX2* (*short stature homeobox 2*).

Fig. S1.11 Regional association plot of novel LDH association on chromosome 4 limited to the area of 87279677-88279677. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *IBSP* (*integrin binding sialoprotein*).

Fig. S1.12 Regional association plot of novel LDH association on chromosome 5 limited to the area of 141235121-142235121. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *HDAC3* (*histone deacetylase 3*).

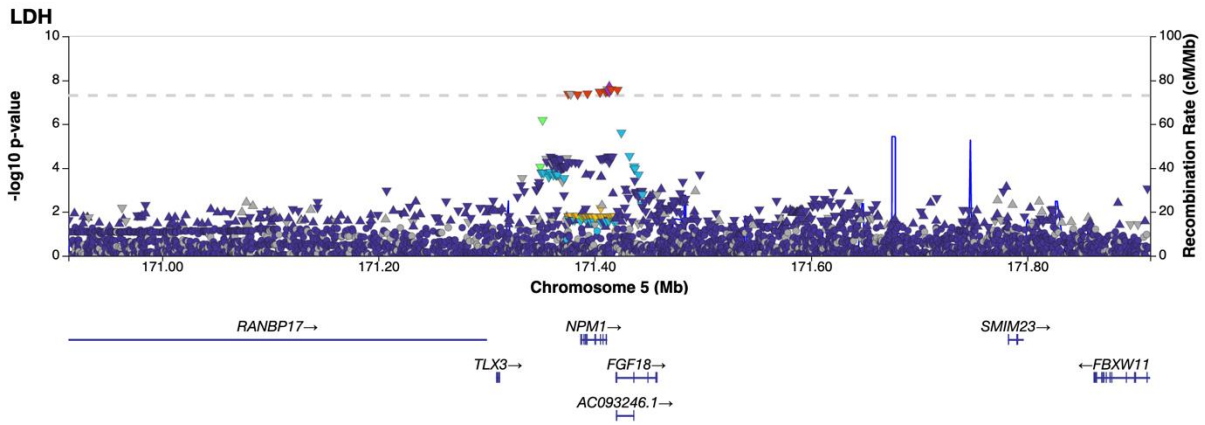

Fig. S1.13 Regional association plot of novel LDH association on chromosome 5 limited to the area of 170913500-171913500. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *FGF18* (fibroblast growth factor 18).

Fig. S1.14 Regional association plot of novel LDH association on chromosome 6 limited to the area of 25776422-26776422. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *TRIM38* (tripartite motif containing 38).

Fig. S1.15 Regional association plot of novel LDH association on chromosome 6 limited to the area of 29373925-30373925. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *HLA*.

Fig. S1.16 Regional association plot of novel LDH association on chromosome 6 limited to the area of 30779637-31779637. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *HLA*.

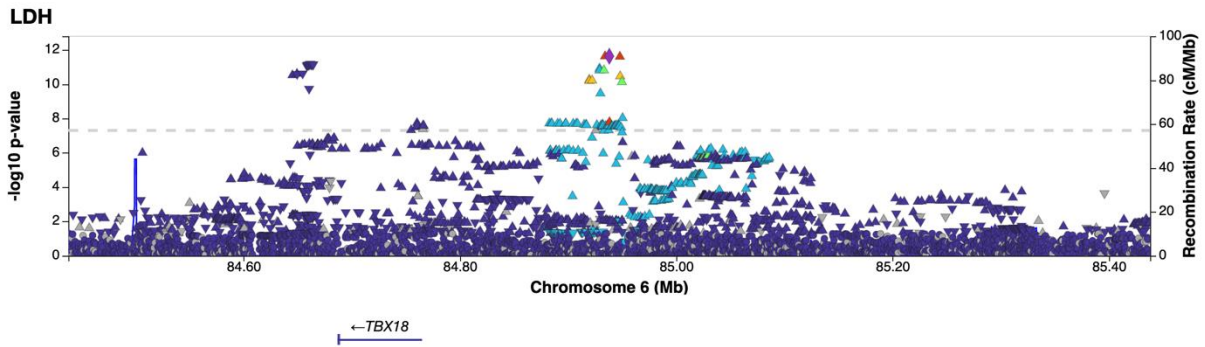

Fig. S1.17 Regional association plot of novel LDH association on chromosome 6 limited to the area of 84438145-85438145. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *TBX18* (*T-box transcription factor 18*).

Fig. S1.18 Regional association plot of novel LDH association on chromosome 7 limited to the area of 73214641-74214641. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *ELN* (*elastin*).

Fig. S1.19 Regional association plot of novel LDH association on chromosome 7 limited to the area of 129523656-130523656. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *ZC3HC1* (*zinc finger C3HC-type containing 1*).

Fig. S1.20 Regional association plot of novel LDH association on chromosome 7 limited to the area of 134918700-135918700. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *STMP1* (*short transmembrane mitochondrial protein 1*).

Fig. S1.21 Regional association plot of novel LDH association on chromosome 9 limited to the area of 24898495-25898495. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *TUSC1* (*tumor suppressor candidate 1*).

Fig. S1.22 Regional association plot of novel LDH association on chromosome 9 limited to the area of 110430238-111430238. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *LPAR1* (*lysophosphatidic acid receptor 1*).

Fig. S1.23 Regional association plot of novel LDH association on chromosome 9 limited to the area of 127736873-128736873. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *DNMI1* (*dynamain 1*).

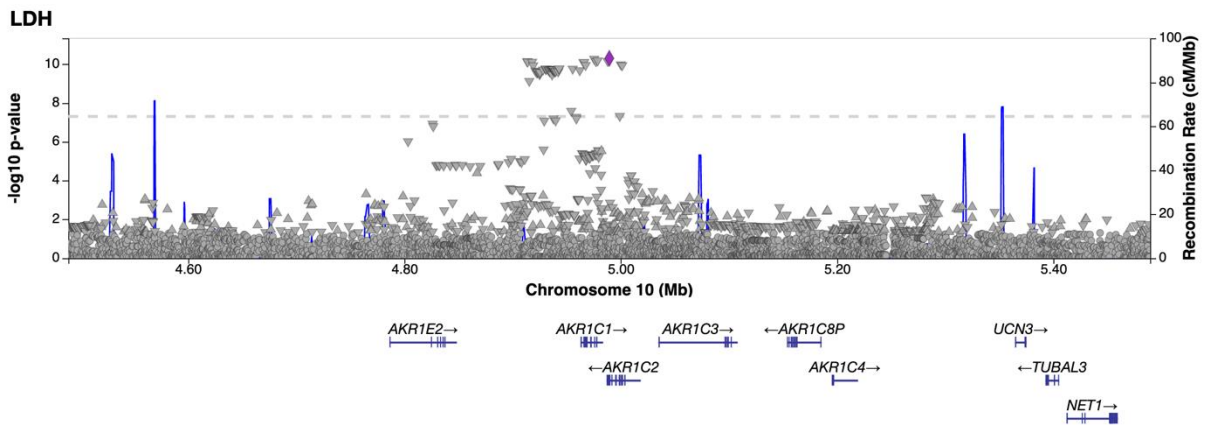

Fig. S1.24 Regional association plot of novel LDH association on chromosome 10 limited to the area of 4489436-5489436. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *AKR1C1* (*aldo-keto reductase family 1 member C1*).

Fig. S1.25 Regional association plot of novel LDH association on chromosome 10 limited to the area of 121975088-122975088. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *HTRA1* (*HtrA serine peptidase 1*).

Fig. S1.26 Regional association plot of novel LDH association on chromosome 11 limited to the area of 68708032-69708032. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *MYEOV* (*myeloma overexpressed*).

Fig. S1.27 Regional association plot of novel LDH association on chromosome 11 limited to the area of 110959420-111959420. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *SIK2* (*salt inducible kinase 2*).

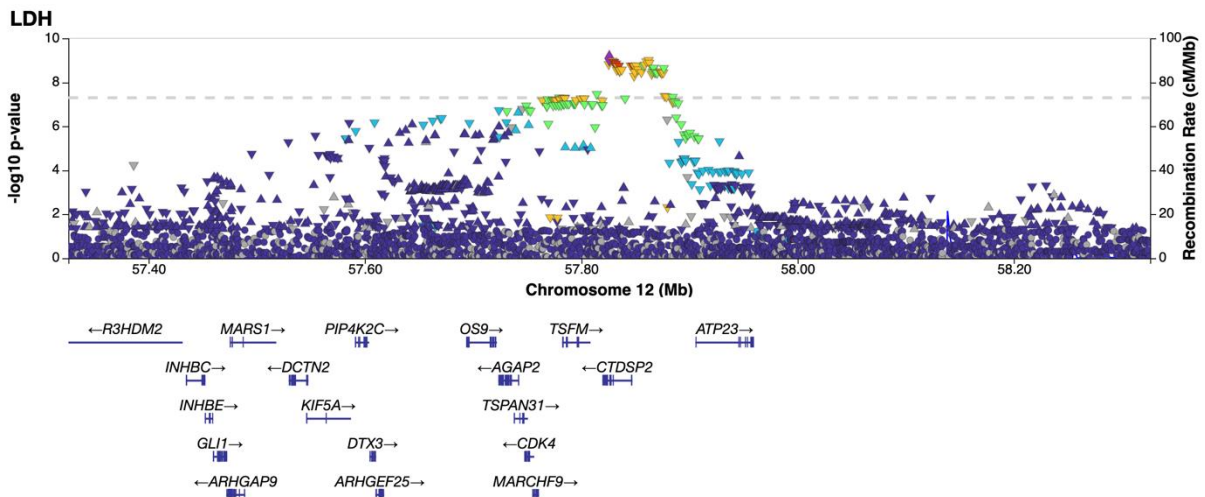

Fig. S1.28 Regional association plot of novel LDH association on chromosome 12 limited to the area of 57325898-58325898. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *GLI1* (*GLI family zinc finger 1*).

Fig. S1.29 Regional association plot of novel LDH association on chromosome 12 limited to the area of 122726288-123726288. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *KMT5A* (*lysine methyltransferase 5A*).

Fig. S1.30 Regional association plot of novel LDH association on chromosome 13 limited to the area of 59404471-60404471. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *DIAPH3* (*diaphanous-related formin 3*).

Fig. S1.31 Regional association plot of novel LDH association on chromosome 17 limited to the area of 51664544-52664544. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *CA10* (*carbonic anhydrase 10*).

Fig. S1.32 Regional association plot of novel LDH association on chromosome 18 limited to the area of 23057478-24057478. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *NPC1* (*NPC intracellular cholesterol transporter 1*).

Fig. S1.33 Regional association plot of novel LDH association on chromosome 18 limited to the area of 44071296-45071296. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *SETBP1* (*SET binding protein 1*).

Fig. S1.34 Regional association plot of novel LDH association on chromosome 18 limited to the area of 52689047-53689047. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *DCC* (*DCC netrin 1 receptor*).

Fig. S1.35 Regional association plot of novel LDH association on chromosome 19 limited to the area of 14033044-15033044. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *TECR* (*trans-2,3-enoyl-CoA reductase*).

Fig. S1.36 Regional association plot of novel LDH association on chromosome 19 limited to the area of 53971384-54971384. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *LENG8* (*leukocyte receptor cluster member 8*).

Fig. S1.37 Regional association plot of novel LDH association on chromosome 21 limited to the area of 33162166-3416166. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *SLC5A3* (solute carrier family 5 member 3).

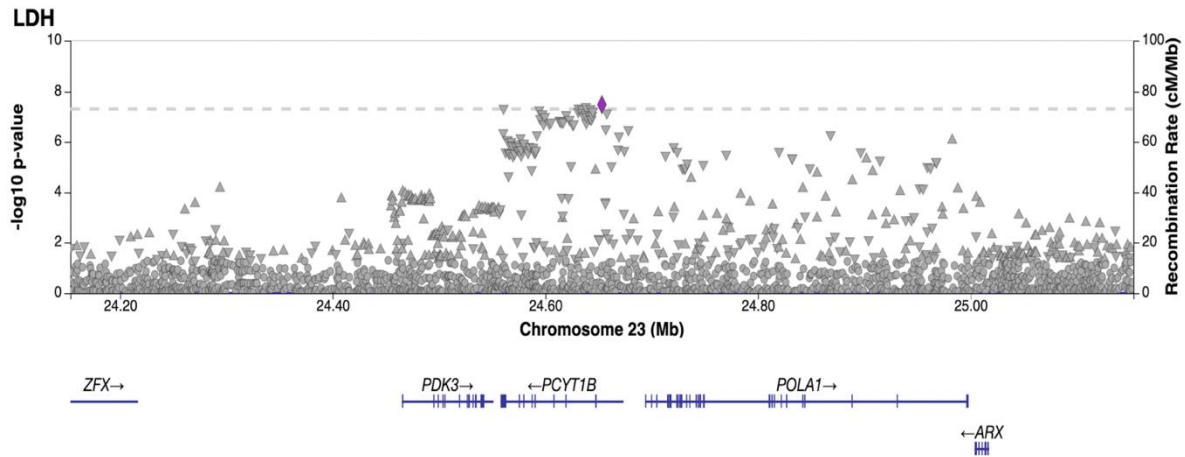

Fig. S1.38 Regional association plot of novel LDH association on chromosome X limited to the area of 24153216-34153216. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *PCYT1B* (phosphate cytidyltransferase 1B).

Fig. S1.39 Regional association plot of novel LDH association on chromosome X limited to the area of 78955466-79955466. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *ITM2A* (*integral membrane protein 2A*).

Fig. S1.40 Regional association plot of novel LDH association on chromosome X limited to the area of 82187578-83187578. The association is based on the results of a meta-analysis. There was not any protein coding gene in this locus, so it was classified as Empty.

Fig. S1.41 Regional association plot of novel LDH association on chromosome X limited to the area of 110140115-111140115. The association is based on the results of a meta-analysis. According to our research, the gene explaining the association of the locus is possibly *CHRDL1* (*chordin like 1*).

Beta estimate (95% CI)

Fig. S2. Effect estimates of lead variants and their 95% confidence intervals in the forest plot. Variants are identified by candidate gene, rsid and effect allele. The diagram shows the effect estimates for each variant both in the meta-analysis and in each dataset separately (FinnGen, ESTBB, UKBB).

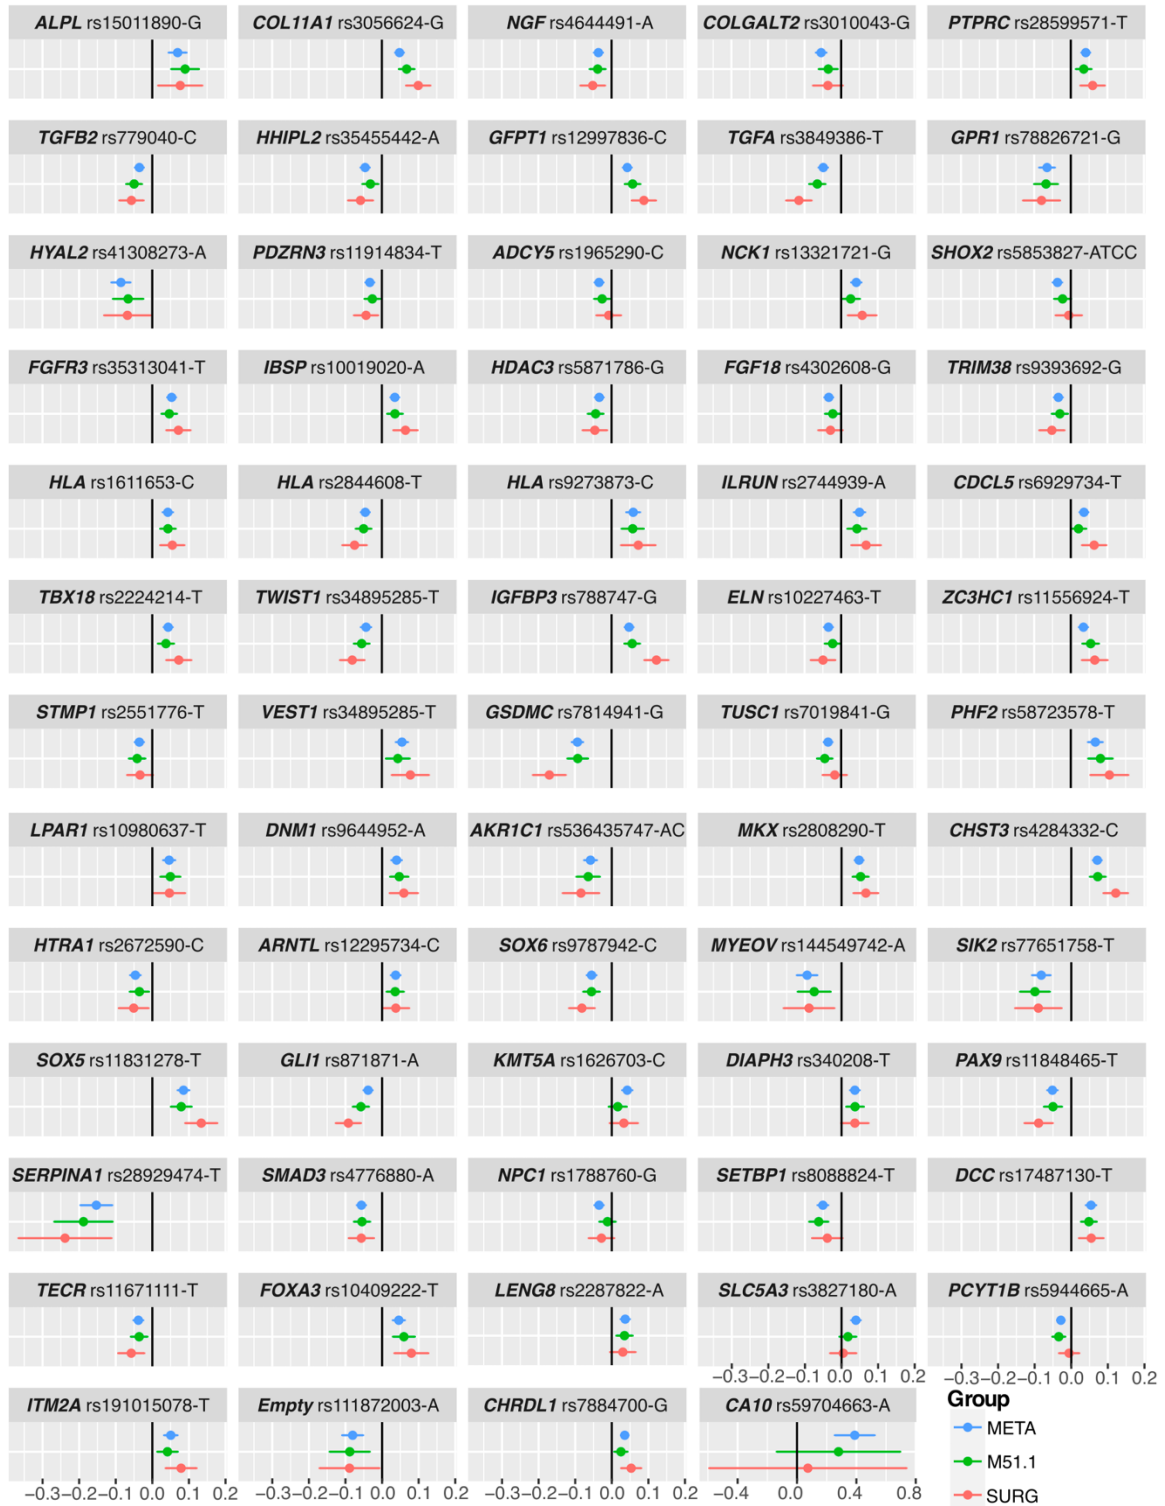

Fig. S3. Effect estimates of lead variants observed in meta-analysis and sensitivity analyses. Variants are identified by candidate gene, rsid and effect allele. The diagram shows the effect estimates for each variant both in the meta-analysis and sensitivity analyses (M51.1, SURG). M51.1 contains only cases that had only M51.1 diagnoses. M51.1 GWAS contains 18857 cases and 270 964 controls. Also, GWAS was performed for patients that had had an LDH related operation. This phenotype contains all patients that had surgical codes of ABC07, ABC16, ABC26. SURG GWAS contains 7347 cases and 270 964 controls. We did not observe any statistically significant effect differences between meta-analysis and M51.1. Between meta-analysis and SURG we observed statistically significant effect differences for *COL11A1*, *GFPT1*, *TGFA*, *TWIST1*, *IGFBP3*, *GSDMC*, *CHST3*, *SOX5* and *GLI1* variants. Results of the effect differences can also be seen from Table S3.

Fig. S4 Above, Manhattan plot of the variants we detected to be associated with LDH in the meta-analysis and below variants we detected to be associated with LDH related surgical operation. Meta-analysis contains 80724 LDH cases and 748 975 controls, consisting of data from FinnGen, the Estonian Biobank, and the UK Biobank. SURG GWAS, where LDH patients who had undergone an LDH-related operation (ABC07, ABC16, ABC26) formed a case group of 7347 and controls of 270 964. Results for the SURG GWAS can be seen in Table S4.

Fig. S5. Results of MAGMA tissue expression analysis¹, no genome-wide significant results were observed in tissue expression analysis. All bars fell below the dashed line, which serves as a marker for genome-wide significant results. y-axis, $-\log_{10}$ P-value; x-axis, tissues (GTEx Output-General tissues). Analysis was done by using FUMA².

Fig. S6 Closer look for *GSDMC* (8:129706613:G:A, rs7814941) and *CHST3* (10:719741194:C:T, rs4284332) variants. The same variants are used, and the curves correspond to the curves in Fig. 3, but in this graph, the development can only be seen at the age of 20–30 years. For these variants, a statistically significant difference between the genotypes was observed even before the age of 30. *GSDMC* 8:129706613-A/A differed from the variant's other genotypes at the age of 26 ($p=0.0005$). *CHST3* 10:71974194-C/C homozygotes became significantly different at the age of 25 ($p=2.22e^{-5}$).

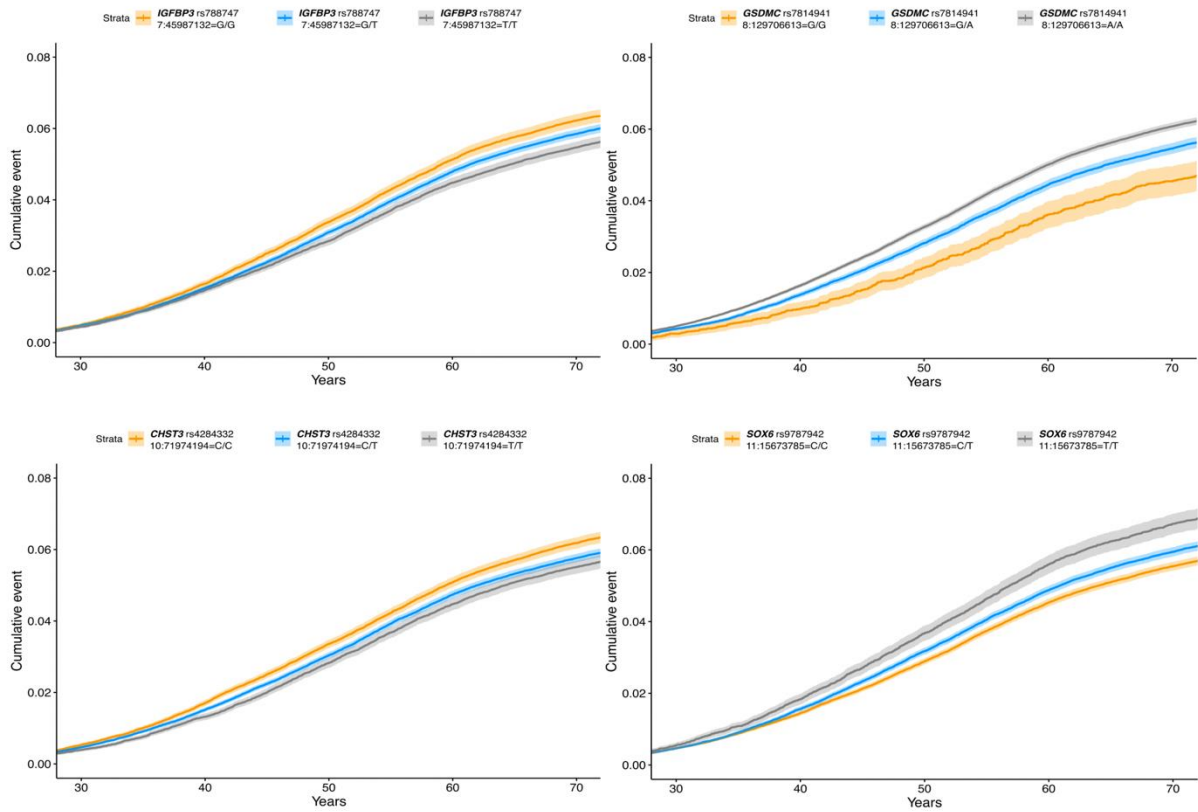

Fig. S7 Kaplan-Meier plots for *IGFBP3* (7:45987132:G:T), *CHST3* (10:719741194:C:T), *GSDMC* (8:129706613:G:A), *SOX6* (11:15673785:C:T). These plots were done as a sensitivity analysis based only M51.1 cases. Age can be seen on the x-axis of the graphs, and cumulative disease severity on the y-axis. The orange line of the graphs depicts homozygotes for the effect allele, gray homozygotes for the other allele, and blue correspondingly heterozygotes who have one of each allele.

Fig. S8.1 Scatterplot for overweight that could possibly be causal for lumbar disc herniation. In Mendelian randomization analysis, performed with TwoSampleMR-database. We focused on the results of the Inverse variance Weighted (IVW) model, with the significance limit of ($P < 0.05$).

Fig. S8.2 Scatterplot for lumbar spine bone mineral density that could possibly be causal for lumbar disc herniation. In Mendelian randomization analysis, performed with TwoSampleMR-database. We focused on the results of the Inverse variance Weighted (IVW) model, with the significance limit of ($P < 0.05$).

Fig. S8.3 Scatterplot for Higher level of education that could possibly be causal for lumbar disc herniation. In Mendelian randomization analysis, performed with TwoSampleMR-database. We focused on the results of the Inverse variance Weighted (IVW) model, with the significance limit of ($P < 0.05$). Original endpoint name is Qualifications: College or University degree || id:ukb-b-16489.

Fig. S9.1 Scatterplot for frequency of tiredness in last 2 weeks-endpoint for which lumbar disc herniation is potentially causal. In Mendelian randomization analysis, performed with TwoSampleMR-database. We focused on the results of the Inverse variance Weighted (IVW) model, with the significance limit of ($P < 0.05$).

Fig. S9.2 Scatterplot for back pain for which lumbar disc herniation is potentially causal. In Mendelian randomization analysis, performed with TwoSampleMR-database. We focused on the results of the Inverse variance Weighted (IVW) model, with the significance limit of ($P < 0.05$).

Fig. S10.1 Leave-one-out, overweight (id:ieu-a-93) as an exposure and lumbar disc herniation as an outcome

Fig. S10.2 Leave-one-out, lumbar spine bone mineral density (id:ieu-a-982) as an exposure and lumbar disc herniation as an outcome

Fig. S10.3 Leave-one-out, higher level of education as an exposure and lumbar disc herniation as an outcome. Original endpoint name is Qualifications: College or University degree || id:ukb-b16489.

Fig. S11.1 Leave-one-out, lumbar disc herniation as an exposure and frequency of tiredness in last 2 weeks (id:ukb-b-929) as an outcome.

Fig. S11.2 Leave-one-out, lumbar disc herniation as an exposure and back pain (id:ukb-b-9838) as an outcome.

Table S1 General information about the study populations. The International Classification of Diseases codes that were used to characterize phenotypes. Below, the number of cases and controls in the study.

Study	Revision / Codes	Codes
Meta-analysis		
<u>EstBB</u>	ICD-10	M51 (M510, M511, M512, M513, M514, M518, M519)
<u>UKBB</u>	ICD-10	M51 (M510, M511, M512, M513, M514, M518, M519)
<u>FinnGen</u>	ICD-10	M51 (M510, M511, M512, M513, M514, M518, M519)
	ICD-9	7221A, 7221C, 7223A, 7225A, 7225B, 7226X, 7228C, 7229X
	ICD-8	72510, 72519, 72520, 72551, 72559, 72588, 72599
Sensitivity analysis		
LDH cases with radiculopathy		
Step 1) Characterization of patients with radiculopathy		
	ICD-10	M51.1
	ICD-9	7221A
	ICD-8	72510
Step 2) Patients with other LDH diagnosis codes were excluded from the analysis.		
Surgical GWAS		
Step 1) Characterization of LDH patients in FinnGen		
	ICD-10	M51 (M510, M511, M512, M513, M514, M518, M519)
	ICD-9	7221A, 7225A, 7225B, 7225C
	ICD-8	72510, 72519
Step 2) Patients that have been surgically operated were picked from the characterized LDH patients group		
	NOMESCO, version 1.15	ABC07, ABC16, ABC26
Step 3) LDH cases that have not been surgically operated were excluded from the analysis. Also, surgically operated patients without LDH diagnosis were excluded		

Study population	Cases	Controls	Sample prevalence	Total
FinnGen	37 636	270 964	12.2 %	308 600

Xq23	CHRD1	23:110640115	rs7884700	G	A	1.04	1.03-1.05	9.64e-12	0.40	NA	Novel
-------------	--------------	---------------------	------------------	----------	----------	-------------	------------------	-----------------	-------------	-----------	--------------

Candidate gene, a gene at a new locus the biological function of which is likely to explain the LDH association; CHR: POS, chromosome and position (genome build hg38); rsid; SNP markers identification number; EA, effect allele; OA, other allele; OR, odds ratio; 95% CI, odds ratio 95% confidence interval; EAF, effect allele frequency; Fin Enric., enrichment in Finns (calculated FIN AF/NFEE AF in the Genome Aggregation Database [gnomAD], FIN AF is the allele frequency in Finns and NFEE AF is the allele frequency in Europeans (does not include Finns or Estonians)); NA, not available; REF, reference to literature reporting an LDH association in the vicinity (\pm 1MB) of the lead variant, if lead variant was novel it was also bolded. *, for this variant p-value and OR have been adjusted for the effect of original lead variant at the locus through conditional analysis, the original lead variant is always above the conditional variant in the table.

Table S3 Genomic locations and potential biological role of the association signals. Candidate gene, a gene at a novel locus which biological function is likely to explain the lumbar disc herniation association; rsid, SNP markers identification number, OR, odds ratio, Variant type, genomic location of associated variant, Het pval, p-value for heterogeneity. For the loci that had not been reported in association with LDH in prior studies, we determined a potential candidate gene with a relevant biological function with the help of literature and databases (Genbank⁸, UniProt⁹, GTEX-Portal¹⁰). Even though potential genes have been systematically identified, there is little clarity regarding their causality, so further studies are needed.

Candidate gene	rsid	OR	Variant type	Het Pval	A possible function related to LDH pathogenesis
<i>ALPL</i>	rs150211890	1.07	intron	0.178	<i>ALPL</i> boosts inorganic phosphate local rates, promotes mineralization, and lowers extracellular pyrophosphate concentration, which acts as a mineral formation inhibitor ¹¹ . Greater <i>ALPL</i> activity has been associated with IVD degeneration and calcification ¹² , as according to findings from earlier studies that found that IVD's with degenerative changes had higher levels of <i>ALPL</i> activity and calcification potential than control IVD's without degenerative changes ¹³ .
<i>COL11A1</i>	rs3056624	1.05	intron	0.263	-
<i>NGF</i>	rs4644491	0.96	intron	0.215	<i>NGF</i> promotes collateral sprouting of the peripheral sensory nerves and axonal regeneration in the central nervous system. The IVD may experience nociceptive nerve ingrowth as a result of <i>NGF</i> production ^{14,15} .
<i>COLGALT2</i>	rs3010043	0.95	intron	0.612	-
<i>PTPRC</i>	rs28599571	1.04	intergenic	0.738	-
<i>TGFB2</i>	rs779040	0.97	intergenic	0.0225	This gene encodes a secreted ligand of the TGF- β superfamily of proteins. Ligands of this family bind various TGF- β receptors leading to recruitment and activation of <i>SMAD</i> family transcription factors that regulate gene expression ¹⁶ . TGF- β signaling is necessary for the development and growth of IVD, and can play a protective role in the restoration of IVD tissues by stimulating matrix synthesis, inhibiting matrix catabolism, inflammatory response and cell loss. However, excessive activation of TGF- β signaling is detrimental to the IVD, and inhibition of the aberrant TGF- β signaling can delay IVD degeneration ¹⁷ .
<i>HHIPL2</i>	rs35455442	0.96	intron	0.539	Iron excess can limit <i>HHIPL2</i> gene expression and decrease osteoblastic activity in human MG-63 cells ¹⁸ . <i>HHIPL2</i> is an inhibitor of the hedgehog signalling pathway, this pathway has previously been linked together with <i>GLII</i> to hypertrophy of the ligamentum flavum ¹⁹ . <i>HHIPL2</i> has also been found to be involved in extracellular matrix synthesis in IVDs ²⁰ .
<i>GFPT1</i>	rs12997836	1.04	intergenic	0.298	-
<i>TGFA</i>	rs3849386	0.95	intron	0.402	-
<i>GPR1</i>	rs78826721	0.94	intron	0.171	<i>GPR1</i> is a chemerin receptor that may mediate chemerin activities in inflammation ²¹ . Chemerin can induce many inflammatory cytokines, activate NF- κ B signaling pathway ²² . <i>GPR1</i> deficiency has also been found to reduce bone mass and BMD (osteopenia) in mouse studies ^{23,24} .
<i>HYAL2</i>	rs41308273	0.92	intron	0.498	<i>HYAL2</i> codes for hyaluronidase that degrades hyaluronan. Degradation of hualyronan is not a benign event, as it reduces the size of the aggrecan aggregates and can promote their diffusion ^{25,26} .
<i>PDZRN3</i>	rs11914834	0.97	regulatory region	0.984	Possibly a negative regulator of Wnt/ β -catenin signaling ²⁷ . Activation of the Wnt/ β -catenin pathway has been found to be associated with endplate degeneration, increased IVD cell senescence, and extracellular matrix degradation ^{28,29} .
<i>ADCY5</i>	rs1965290	0.97	intron	0.0391	<i>ADCY5</i> has a role in osteogenic differentiation and may be associated with vertebral fractures and BMD ^{30,31} .
<i>NCK1</i>	rs13321721	1.04	intron	0.822	<i>NCK1</i> inhibits the ability of <i>DCC</i> to induce neurite outgrowth, thus playing role in axonal guidance ³² .
<i>SHOX2</i>	rs5853827	0.96	intron	0.492	<i>SHOX2</i> prevents the onset of early chondrocyte differentiation and controls the transition of chondrocytes from mature to hypertrophic by regulating the expression of transcription factors, such as <i>SOX6</i> , <i>SOX9</i> , and <i>RUNX2</i> . Inhibition of <i>SHOX2</i> decreases expression of aggrecan and collagen II in nucleus pulposus and thus can lead to degenerative changes in IVDs ³³ .
<i>FGFR3</i>	rs35313041	1.05	intron	0.0086	-
<i>IBSP</i>	rs10019020	1.04	intergenic	0.439	Dysregulation of <i>IBSP</i> may induce de-adhesion, characterized by disruption of extracellular matrix organization and focal adhesions, which can accelerate IVD degeneration ³⁴ .

HDAC3	rs5871786	0.97	intron	0.729	<i>HDAC3</i> is a highly pleiotropic epigenetic regulator. TGF- β signaling pathway is regulated by <i>HDACs</i> and acetylation, and a number of TGF- β -induced genes involved in the remodelling and regulation of the extracellular matrix are regulated by <i>HDAC</i> inhibition. <i>HDAC3</i> plays a central role in these reactions. ^{35,36} <i>HDAC3</i> can also mediate HIF-1 α stability in IVDs ³⁷ . In addition, it has been found to interact with <i>RUNX2</i> to repress the osteocalcin promoter and thus regulate osteoblast differentiation ³⁸ .
FGF18	rs4302608	0.97	downstream	0.897	<i>FGF18</i> is a well-characterised anabolic growth factor involved in cartilage homeostasis ³⁹ . Its function in the IVD is not fully understood, but it has been found that <i>FGF18</i> could delay the degeneration of the IVD by inhibiting the apoptosis of NPs and the expression of matrix-degrading enzymes ⁴⁰ .
TRIM38	rs9393692	0.97	upstream	0.831	<i>TRIM38</i> protects chondrocytes from IL-1 β -induced apoptosis and degeneration via negatively modulating nuclear factor (NF)- κ B signalling ⁴¹ . IL-1 β is also a key risk factor for intervertebral disc degeneration ⁴² .
HLA	rs1611653	1.04	intron	0.224	-
HLA	rs2844608	0.96	intron	0.0185	-
HLA	rs9273873	1.06	noncoding transcript exon variant	0.491	-
ILRUN	rs2744939	1.05	upstream	0.0231	-
CDC5L	rs6929734	1.04	regulatory region	0.0318	-
TBX18	rs2224214	1.04	intergenic	0.664	<i>TBX18</i> acts as a transcriptional repressor involved in the developmental processes of the vertebral column. In studies conducted in mice, the <i>TBX18</i> null mutation has been found to affect perinatal lethality with shortened axial skeletons; effects included kinks in the thoracic vertebral column, malformed, flattened discs, and vertebral bodies, expanded pedicles, and transverse processes ⁴³ .
TWIST1	rs34895285	0.96	intron	0.202	-
IGFBP3	rs788747	1.05	upstream gene variant	0.578	-
ELN	rs10227463	0.97	intron	0.768	Elastin is important structural component of ECM and present in connective tissues. In IVD's elastin may function to restore lamellar structure under radial loads that potentially cause delamination. The observed increases in elastin with degeneration may reflect both newly synthesized elastic fibers and/or degraded elastin peptides trapped in matrix as part of the degenerative cascade ⁴⁴ .
ZC3HC1	rs11556924	1.04	missense	0.286	<i>ZC3HC1</i> encodes an F-box-containing protein that is a component of an SCF-type E3 ubiquitin ligase complex that regulates the onset of cell division. The G2/M transition in the cell cycle requires the interaction of the proteins cyclin B1 and cyclin-dependent kinase 1. The activated ubiquitin ligase complex targets the protein cyclin B1 for degradation, preventing this transition to mitosis ⁴⁵ .
STMP1	rs2551776	0.97	intron	0.318	<i>STMP1</i> potentially has a role in bone remodeling, it has previously been associated with Paget's disease of bone. It also potentially plays a role in regulating the NLRP3 inflammasome ^{46,47} .
VEST1	rs2164198	1.06	intron	0.0367	-
GSDMC	rs7814941	0.91	splice region variant	0.00552	-
TUSC1	rs7019841	0.96	intergenic	0.696	The connection between <i>TUSC1</i> and LDH is not yet known, and it has become known mainly as a potential tumor suppressor in human cancers. It has been found to suppress cell proliferation and cell cycle progression ⁴⁸ . It is possible that it also affects intervertebral disc degeneration by regulating these pathways, but there is no research evidence for this yet.
PHF2	rs58723578	1.07	intergenic	0.034	-
LPARI	rs10980637	1.05	intron	0.395	The increased expression of <i>LPARI</i> has been associated with the fibrosis and hypertrophy of the ligamentum flavum ⁴⁹ . <i>LPARI</i> deletion can also cause neurodevelopmental disorders such as demyelination diseases and neuropathic pain ⁵⁰ .
DNMI	rs9644952	1.04	intron	0.807	<i>DNMI</i> plays a central role in the transmission of nociceptive messages within the nociceptive circuits in the dorsal horn of the spinal cord, where <i>DNMI</i> -mediated endocytosis of synaptic vesicles enables sustained neurotransmission ⁵¹ .

<i>AKR1C1</i>	rs536435747	0.94	3 prime UTR	0.513	<i>AKR1C1</i> is possibly involved in the regulation of inflammatory factors; it is possibly involved in the regulation of <i>IL-1</i> , <i>TNF</i> , and <i>TGFB1</i> -related pathways ^{52,53} .
<i>MKX</i>	rs2808290	1.05	intergenic	0.211	-
<i>CHST3</i>	rs4284332	1.07	intron	0.741	-
<i>HTRA1</i>	rs2672590	0.95	intron	0.521	<i>HTRA1</i> is serine protease that antagonizes TGF- β signaling and has a role in regulation of bone formation ⁵⁴ . It may also degrade proteoglycans such as aggrecan, decorin, and fibromodulin, and thus contribute to the cartilage degradation ⁵⁵ .
<i>ARNTL</i>	rs12295734	1.04	intergenic	0.195	-
<i>SOX6</i>	rs9787942	0.95	intron	0.507	-
<i>MYEOV</i>	rs144549742	0.91	intergenic	0.469	<i>MYEOV</i> has been observed to interact with <i>SOX9</i> and potentially enhance its transactivity ⁵⁶ .
<i>SIK2</i>	rs77651758	0.92	intron	0.67	Parathyroid hormone can modulate <i>SIK2</i> to promote bone formation and resorption, by inhibiting its activity ⁵⁷ .
<i>SOX5</i>	rs11831278	1.09	intron	0.805	-
<i>GLI1</i>	rs871871	0.96	intron	0.635	The growth plate mediates bone growth where <i>SOX9</i> and <i>GLI</i> factors control chondrocyte proliferation, differentiation and entry into hypertrophy. <i>GLI1</i> functions as an activator which is highly expressed in proliferating chondrocytes and perichondrium adjacent to the prehypertrophic and hypertrophic zones ⁵⁸ .
<i>KMT5A</i>	rs1626703	1.04	splice region	0.578	<i>KMT5A</i> inhibits oxidative stress induced autophagy and glial scar formation in astrocytes via the <i>KEAP1-NRF2-ARE</i> signaling pathway ⁵⁹ . <i>KMT5A</i> also has a role in TGF- β response regulation where it is important for turning of activation of <i>SMAD2</i> ⁶⁰ .
<i>DIAPH3</i>	rs340208	1.04	intron	0.445	<i>DIAPH3</i> is involved in cell migration, axon guidance and neuritogenesis ⁶¹ . It has been found to affect spine length and density of neurons ⁶² .
<i>PAX9</i>	rs11848465	0.95	intron	0.999	-
<i>SERPINA1</i>	rs28929474	0.86	missense	0.762	-
<i>SMAD3</i>	rs4776880	0.95	intron	0.0729	-
<i>CA10</i>	rs59704663	1.48	upstream gene variant	0.156	<i>CA10</i> blocks the binding of heparan sulfate to neurexin ⁶³ , which possibly raises neurexin surface levels ⁶⁴ . Neurexins are pre-synaptic cell adhesion molecules that play a role in connecting neurons at synapses. Heparan sulfate has been found to potentially expand the interactome of neurexins, and they also play a role in fine-tuning synaptic transmission ⁶⁵ . <i>CA10</i> is expressed especially in the central nervous system, and it has been associated with chronic pain in previous studies ^{64,66} .
<i>NPC1</i>	rs1788760	0.97	intron	0.89	<i>NPC1</i> has a role in cholesterol trafficking, which has a role in mTOR regulation. Changes in this pathway have been found to lead to increased angiogenesis ^{67,68} , which in turn can lead to IVD innervation ⁶⁹ .
<i>SETBP1</i>	rs8088824	0.95	intergenic	0.185	<i>SETBP1</i> may have a regulatory role in Wnt/ β -catenin pathway in neural cells ⁷⁰ , <i>SETBP1</i> has also been associated with adolescent idiopathic scoliosis ⁷¹ .
<i>DCC</i>	rs17487130	1.06	intron	0.862	In diseased IVD's <i>DCC</i> might play an important role in neurovascular ingrowth/axonal guidance ^{32,72} .
<i>TECR</i>	rs11671111	0.96	intron	0.769	<i>TECR</i> is involved in both the production of very long-chain fatty acids for sphingolipid synthesis and the degradation of the sphingosine moiety in sphingolipids through the sphingosine 1-phosphate metabolic pathway ⁷³ . It has been proposed that <i>TECR</i> , as a synaptic glycoprotein, may have a specialized, as yet unknown, function in the nervous system that affects communication between neurons or synaptic plasticity ⁷⁴ .
<i>FOXA3</i>	rs10409222	1.05	downstream	0.394	-
<i>LENG8</i>	rs2287822	1.04	intron	0.394	<i>LENG8</i> regulates inflammation cascades and can interact with many proteins involved in rheumatoid arthritis, like interleukin-18 ⁷⁵ . Interleukin-18 has also been implicated in the pathogenesis of IVD degeneration ⁷⁶ .
<i>SLC5A3</i>	rs3827180	1.04	intron	0.101	<i>SLC5A3</i> cotransports Na ⁺ and myo-inositol, a critical osmotic regulator for cells ⁷⁷ . Changes in the concentration of myo-inositol have been observed in connection with IVD degeneration. <i>SLC5A3</i> may contribute to the imbalance of disc osmotic activity in degenerative diseases ⁷⁸ . <i>SLC5A3</i> is also attributed a specific role regarding the p53-mediated G1 checkpoint activation and/or the p38 MAPK-dependent G2/M arrest; these cascades are therefore triggered by high osmolality ⁷⁹ .
<i>PCYT1B</i>	rs5944665	0.97	intron	0.925	<i>PCYT1B</i> could have a role in axon regeneration and branching. It is involved in the regulation of phosphatidylcholine

					biosynthesis, that has been proposed to be key regulatory mechanism for axon regeneration ⁸⁰⁻⁸² .
<i>ITM2A</i>	rs191015078	1.05	intergenic	0.536	<i>ITM2A</i> may inhibit the initiation of chondrogenesis and elevated expression of <i>ITM2A</i> can therefore be linked to poorer chondrogenic differentiation potential ^{83,84} .
Empty	rs111872003	0.92	intergenic	0.176	-
<i>CHRDL1</i>	rs7884700	1.04	downstream	0.438	<i>CHRDL1</i> can possibly influence <i>BMP-4-SMAD1/5/9</i> pathways activity and through that it might have an important role in hBMSCs osteogenic differentiation and bone remodeling ⁸⁵ .

Table S4. Effect differences between meta-analysis and SURG GWAS. Lead variants are variants that were observed in the meta-analysis. Beta estimates and their standard errors were collected from the GWAS result files of meta-analysis and SURG GWAS. Values of $P_{\text{diff}} < 0.05$ were considered statistically significant.

Lead variant	Candidate Gene	Beta meta	Beta SURG	Se meta	Se SURG	P_{diff}

Table S5 Genome-wide significant ($p < 5 \times 10^{-8}$) lead variants were associated with LDH related surgical operation. There are 7347 operated LDH cases and 270 964 controls in the analysis, consisting of data from FinnGen.

CHR: POS, chromosome and position (genome build hg38); Candidate gene, a gene at a new locus whose biological function is likely to explain the LDH related surgical operation association; rsid; SNP markers identification number; EA, effect allele; OA, other allele; OR 95% CI, odds ratio and its 95% confidence interval; EAF, effect allele frequency; pval, p-value, pval meta, variants p-value in LDH meta-analysis; REF, reference article in which a LDH related surgical operation association was observed +/- 1 Mb in the vicinity of the lead variant.

Table S6 Cumulative patient morbidity and cumulative surgeries observed for every LDH associated variant. The analysis was done by extracting the genotypes corresponding to the variants associated with LDH in FinnGen's Sandbox environment and combining them with the health register data. Cumulative morbidities are specified with same ICD-codes as in Table S1. The prevalence of LDH cases was 12.2% and prevalence of surgical patients was 2.6%.

Table S7 Genetic correlations for all 438 phenotypes. Genetic correlations were calculated using LDSC-software⁸⁶. All traits were extracted from the GWAS database provided by the MRC Integrative Epidemiology Unit (IEU). RG, genetic correlation coefficient value; pFDR, false discovery rate-corrected p-value.

Trait	RG	se	p	pFDR
Concentration of small VLDL particles	0.1533	0.0595	0.010	0.017

Table S8 Potentially causal exposures for LDH. Analysis was performed by using TwoSampleMR-database and the phenotype IDs used in the analysis were extracted from the MRC-IEU database. For the analysis, we extracted genetic instruments from FinnGen based GWAS results, to avoid possible bias from overlapping samples. Because MRC-IEU's GWAS data is mainly based on data from UKBB. The results are based on the Inverse variance weighted-model and were statistically significant ($P < 0.05$). As a sensitivity analysis we also performed analysis by using MR Egger. Nsnp, number of SNPs; OR, odds ratio, pFDR, false discovery rate-corrected p-value; pHET, p-value for heterogeneity; pPLE, p-value for pleiotropy

Direction	Trait	Method	nsnp	Causal estimate scale	Causal estimate	pFDR	pHET	Egger intercept	pPLE

Table S10 List of risk factors that were used in bi-directional Mendelian randomization. We used the Two-Sample MR R library to conduct a bi-directional Mendelian randomization to examine the causal relationships between LDH and its associated risk factors. Risk factors were extracted from the GWAS database provided by the MRC Integrative Epidemiology Unit (IEU) (<https://gwas.mrcieu.ac.uk/>)

Table S11 A list of FinnGen authors and their affiliations.

Full Name	Affiliation	Role 1	Role 2
Aarno Palotie	Institute for Molecular Medicine Finland (FIMM), HiLIFE, University of Helsinki, Helsinki, Finland; Broad Institute of MIT and Harvard; Massachusetts General Hospital	Steering Committee	Steering Committee
Mark Daly	Institute for Molecular Medicine Finland (FIMM), HiLIFE, University of Helsinki, Helsinki, Finland; Broad Institute of MIT and Harvard; Massachusetts General Hospital	Steering Committee	Steering Committee
Bridget Riley-Gills	Abbvie, Chicago, IL, United States	Steering Committee	Pharmaceutical companies
Howard Jacob	Abbvie, Chicago, IL, United States	Steering Committee	Pharmaceutical companies
Dirk Paul	Astra Zeneca, Cambridge, United Kingdom	Steering Committee	Pharmaceutical companies
Slavé Petrovski	Astra Zeneca, Cambridge, United Kingdom	Steering Committee	Pharmaceutical companies
Heiko Runz	Biogen, Cambridge, MA, United States	Steering Committee	Pharmaceutical companies
Sally John	Biogen, Cambridge, MA, United States	Steering Committee	Pharmaceutical companies
George Okafo	Boehringer Ingelheim, Ingelheim am Rhein, Germany	Steering Committee	Pharmaceutical companies
Nathan Lawless	Boehringer Ingelheim, Ingelheim am Rhein, Germany	Steering Committee	Pharmaceutical companies
Heli Salminen-Mankonen	Boehringer Ingelheim, Ingelheim am Rhein, Germany	Steering Committee	Pharmaceutical companies
Robert Plenge	Bristol Myers Squibb, New York, NY, United States	Steering Committee	Pharmaceutical companies
Joseph Maranville	Bristol Myers Squibb, New York, NY, United States	Steering Committee	Pharmaceutical companies
Mark McCarthy	Genentech, San Francisco, CA, United States	Steering Committee	Pharmaceutical companies
Margaret G. Ehm	GlaxoSmithKline, Collegeville, PA, United States	Steering Committee	Pharmaceutical companies
Kirsi Auro	GlaxoSmithKline, Espoo, Finland	Steering Committee	Pharmaceutical companies
Simonne Longereich	Merck, Kenilworth, NJ, United States	Steering Committee	Pharmaceutical companies
Anders Mälarstig	Pfizer, New York, NY, United States	Steering Committee	Pharmaceutical companies
Katherine Klinger	Translational Sciences, Sanofi R&D, Framingham, MA, USA	Steering Committee	Pharmaceutical companies
Clement Chatelain	Translational Sciences, Sanofi R&D, Framingham, MA, USA	Steering Committee	Pharmaceutical companies
Matthias Gossel	Translational Sciences, Sanofi R&D, Framingham, MA, USA	Steering Committee	Pharmaceutical companies
Karol Estrada	Maze Therapeutics, San Francisco, CA, United States	Steering Committee	Pharmaceutical companies
Robert Graham	Maze Therapeutics, San Francisco, CA, United States	Steering Committee	Pharmaceutical companies
Robert Yang	Janssen Biotech, Beerse, Belgium	Steering Committee	Pharmaceutical companies
Chris O'Donnell	Novartis Institutes for BioMedical Research, Cambridge, MA, United States	Steering Committee	Pharmaceutical companies
Tomi P. Mäkelä	HiLIFE, University of Helsinki, Finland, Finland	Steering Committee	University of Helsinki & Biobanks
Jaakko Kaprio	Institute for Molecular Medicine Finland (FIMM), HiLIFE, University of Helsinki, Helsinki, Finland	Steering Committee	University of Helsinki & Biobanks
Petri Virolainen	Auria Biobank / University of Turku / Hospital District of Southwest Finland, Turku, Finland	Steering Committee	University of Helsinki & Biobanks
Antti Hakanen	Auria Biobank / University of Turku / Hospital District of Southwest Finland, Turku, Finland	Steering Committee	University of Helsinki & Biobanks
Terhi Kilpi	THL Biobank / Finnish Institute for Health and Welfare (THL), Helsinki, Finland	Steering Committee	University of Helsinki & Biobanks
Markus Perola	THL Biobank / Finnish Institute for Health and Welfare (THL), Helsinki, Finland	Steering Committee	University of Helsinki & Biobanks

Jukka Partanen	Finnish Red Cross Blood Service / Finnish Hematology Registry and Clinical Biobank, Helsinki, Finland	Steering Committee	University of Helsinki & Biobanks
Anne Pitkäranta	Helsinki Biobank / Helsinki University and Hospital District of Helsinki and Uusimaa, Helsinki	Steering Committee	University of Helsinki & Biobanks
Taneli Raivio	Helsinki Biobank / Helsinki University and Hospital District of Helsinki and Uusimaa, Helsinki	Steering Committee	University of Helsinki & Biobanks
Jani Tikkanen	Northern Finland Biobank Borealis / University of Oulu / Northern Ostrobothnia Hospital District, Oulu, Finland	Steering Committee	University of Helsinki & Biobanks
Raisa Serpi	Northern Finland Biobank Borealis / University of Oulu / Northern Ostrobothnia Hospital District, Oulu, Finland	Steering Committee	University of Helsinki & Biobanks
Tarja Laitinen	Finnish Clinical Biobank Tampere / University of Tampere / Pirkanmaa Hospital District, Tampere, Finland	Steering Committee	University of Helsinki & Biobanks
Veli-Matti Kosma	Biobank of Eastern Finland / University of Eastern Finland / Northern Savo Hospital District, Kuopio, Finland	Steering Committee	University of Helsinki & Biobanks
Jari Laukkanen	Central Finland Biobank / University of Jyväskylä / Central Finland Health Care District, Jyväskylä, Finland	Steering Committee	University of Helsinki & Biobanks
Marco Hautalahti	FINBB - Finnish biobank cooperative	Steering Committee	University of Helsinki & Biobanks
Outi Tuovila	Business Finland, Helsinki, Finland	Steering Committee	Other Experts/ Non-Voting Members
Raimo Pakkanen	Business Finland, Helsinki, Finland	Steering Committee	Other Experts/ Non-Voting Members
Jeffrey Waring	Abbvie, Chicago, IL, United States	Scientific Committee	Pharmaceutical companies
Bridget Riley-Gillis	Abbvie, Chicago, IL, United States	Scientific Committee	Pharmaceutical companies
Fedik Rahimov	Abbvie, Chicago, IL, United States	Scientific Committee	Pharmaceutical companies
Ioanna Tachmazidou	Astra Zeneca, Cambridge, United Kingdom	Scientific Committee	Pharmaceutical companies
Chia-Yen Chen	Biogen, Cambridge, MA, United States	Scientific Committee	Pharmaceutical companies
Heiko Runz	Biogen, Cambridge, MA, United States	Scientific Committee	Pharmaceutical companies
Zhihao Ding	Boehringer Ingelheim, Ingelheim am Rhein, Germany	Scientific Committee	Pharmaceutical companies
Marc Jung	Boehringer Ingelheim, Ingelheim am Rhein, Germany	Scientific Committee	Pharmaceutical companies
Shameek Biswas	Bristol Myers Squibb, New York, NY, United States	Scientific Committee	Pharmaceutical companies
Rion Pendergrass	Genentech, San Francisco, CA, United States	Scientific Committee	Pharmaceutical companies
Margaret G. Ehm	GlaxoSmithKline, Collegeville, PA, United States	Scientific Committee	Pharmaceutical companies
David Pulford	GlaxoSmithKline, Stevenage, United Kingdom	Scientific Committee	Pharmaceutical companies
Neha Raghavan	Merck, Kenilworth, NJ, United States	Scientific Committee	Pharmaceutical companies
Adriana Huertas-Vazquez	Merck, Kenilworth, NJ, United States	Scientific Committee	Pharmaceutical companies
Jae-Hoon Sul	Merck, Kenilworth, NJ, United States	Scientific Committee	Pharmaceutical companies
Anders Mälärstig	Pfizer, New York, NY, United States	Scientific Committee	Pharmaceutical companies
Xinli Hu	Pfizer, New York, NY, United States	Scientific Committee	Pharmaceutical companies
Åsa Hedman	Pfizer, New York, NY, United States	Scientific Committee	Pharmaceutical companies
Katherine Klinger	Translational Sciences, Sanofi R&D, Framingham, MA, USA	Scientific Committee	Pharmaceutical companies
Robert Graham	Maze Therapeutics, San Francisco, CA, United States	Scientific Committee	Pharmaceutical companies

Manuel Rivas	Maze Therapeutics, San Francisco, CA, United States	Scientific Committee	Pharmaceutical companies
Dawn Waterworth	Janssen Research & Development, LLC, Spring House, PA, United States	Scientific Committee	Pharmaceutical companies
Nicole Renaud	Novartis Institutes for BioMedical Research, Cambridge, MA, United States	Scientific Committee	Pharmaceutical companies
Ma'en Obeidat	Novartis Institutes for BioMedical Research, Cambridge, MA, United States	Scientific Committee	Pharmaceutical companies
Samuli Ripatti	Institute for Molecular Medicine Finland (FIMM), HiLIFE, University of Helsinki, Helsinki, Finland	Scientific Committee	University of Helsinki & Biobanks
Johanna Schleutker	Auria Biobank / Univ. of Turku / Hospital District of Southwest Finland, Turku, Finland	Scientific Committee	University of Helsinki & Biobanks
Markus Perola	THL Biobank / Finnish Institute for Health and Welfare (THL), Helsinki, Finland	Scientific Committee	University of Helsinki & Biobanks
Mikko Arvas	Finnish Red Cross Blood Service / Finnish Hematology Registry and Clinical Biobank, Helsinki, Finland	Scientific Committee	University of Helsinki & Biobanks
Olli Carpén	Helsinki Biobank / Helsinki University and Hospital District of Helsinki and Uusimaa, Helsinki	Scientific Committee	University of Helsinki & Biobanks
Reetta Hinttala	Northern Finland Biobank Borealis / University of Oulu / Northern Ostrobothnia Hospital District, Oulu, Finland	Scientific Committee	University of Helsinki & Biobanks
Johannes Kettunen	Northern Finland Biobank Borealis / University of Oulu / Northern Ostrobothnia Hospital District, Oulu, Finland	Scientific Committee	University of Helsinki & Biobanks
Arto Mannermaa	Biobank of Eastern Finland / University of Eastern Finland / Northern Savo Hospital District, Kuopio, Finland	Scientific Committee	University of Helsinki & Biobanks
Katriina Aalto-Setälä	Faculty of Medicine and Health Technology, Tampere University, Tampere, Finland	Scientific Committee	University of Helsinki & Biobanks
Mika Kähönen	Finnish Clinical Biobank Tampere / University of Tampere / Pirkanmaa Hospital District, Tampere, Finland	Scientific Committee	University of Helsinki & Biobanks
Jari Laukkanen	Central Finland Biobank / University of Jyväskylä / Central Finland Health Care District, Jyväskylä, Finland	Scientific Committee	University of Helsinki & Biobanks
Johanna Mäkelä	FINBB - Finnish biobank cooperative	Scientific Committee	University of Helsinki & Biobanks
Reetta Kälviäinen	Northern Savo Hospital District, Kuopio, Finland	Clinical Groups	Neurology Group
Valtteri Julkunen	Northern Savo Hospital District, Kuopio, Finland	Clinical Groups	Neurology Group
Hilkka Soininen	Northern Savo Hospital District, Kuopio, Finland	Clinical Groups	Neurology Group
Anne Remes	Northern Ostrobothnia Hospital District, Oulu, Finland	Clinical Groups	Neurology Group
Mikko Hiltunen	University of Eastern Finland, Kuopio, Finland	Clinical Groups	Neurology Group
Jukka Peltola	Pirkanmaa Hospital District, Tampere, Finland	Clinical Groups	Neurology Group
Minna Raivio	Hospital District of Helsinki and Uusimaa, Helsinki, Finland	Clinical Groups	Neurology Group
Pentti Tienari	Hospital District of Helsinki and Uusimaa, Helsinki, Finland	Clinical Groups	Neurology Group
Juha Rinne	Hospital District of Southwest Finland, Turku, Finland	Clinical Groups	Neurology Group
Roosa Kallionpää	Hospital District of Southwest Finland, Turku, Finland	Clinical Groups	Neurology Group
Juulia Partanen	Institute for Molecular Medicine Finland, HiLIFE, University of Helsinki, Finland	Clinical Groups	Neurology Group
Ali Abbasi	Abbvie, Chicago, IL, United States	Clinical Groups	Neurology Group
Adam Ziemann	Abbvie, Chicago, IL, United States	Clinical Groups	Neurology Group
Nizar Smaoui	Abbvie, Chicago, IL, United States	Clinical Groups	Neurology Group
Anne Lehtonen	Abbvie, Chicago, IL, United States	Clinical Groups	Neurology Group

Susan Eaton	Biogen, Cambridge, MA, United States	Clinical Groups	Neurology Group
Heiko Runz	Biogen, Cambridge, MA, United States	Clinical Groups	Neurology Group
Sanni Lahdenperä	Biogen, Cambridge, MA, United States	Clinical Groups	Neurology Group
Shameek Biswas	Bristol Myers Squibb, New York, NY, United States	Clinical Groups	Neurology Group
Natalie Bowers	Genentech, San Francisco, CA, United States	Clinical Groups	Neurology Group
Edmond Teng	Genentech, San Francisco, CA, United States	Clinical Groups	Neurology Group
Rion Pendergrass	Genentech, San Francisco, CA, United States	Clinical Groups	Neurology Group
Fanli Xu	GlaxoSmithKline, Brentford, United Kingdom	Clinical Groups	Neurology Group
David Pulford	GlaxoSmithKline, Stevenage, United Kingdom	Clinical Groups	Neurology Group
Kirsi Auro	GlaxoSmithKline, Espoo, Finland	Clinical Groups	Neurology Group
Laura Addis	GlaxoSmithKline, Brentford, United Kingdom	Clinical Groups	Neurology Group
John Eicher	GlaxoSmithKline, Brentford, United Kingdom	Clinical Groups	Neurology Group
Qingqin S Li	Janssen Research & Development, LLC, Titusville, NJ 08560, United States	Clinical Groups	Neurology Group
Karen He	Janssen Research & Development, LLC, Spring House, PA, United States	Clinical Groups	Neurology Group
Ekaterina Khramtsova	Janssen Research & Development, LLC, Spring House, PA, United States	Clinical Groups	Neurology Group
Neha Raghavan	Merck, Kenilworth, NJ, United States	Clinical Groups	Neurology Group
Martti Färkkilä	Hospital District of Helsinki and Uusimaa, Helsinki, Finland	Clinical Groups	Gastroenterology Group
Jukka Koskela	Hospital District of Helsinki and Uusimaa, Helsinki, Finland	Clinical Groups	Gastroenterology Group
Sampsa Pikkarainen	Hospital District of Helsinki and Uusimaa, Helsinki, Finland	Clinical Groups	Gastroenterology Group
Airi Jussila	Pirkanmaa Hospital District, Tampere, Finland	Clinical Groups	Gastroenterology Group
Katri Kaukinen	Pirkanmaa Hospital District, Tampere, Finland	Clinical Groups	Gastroenterology Group
Timo Blomster	Northern Ostrobothnia Hospital District, Oulu, Finland	Clinical Groups	Gastroenterology Group
Mikko Kiviniemi	Northern Savo Hospital District, Kuopio, Finland	Clinical Groups	Gastroenterology Group
Markku Voutilainen	Hospital District of Southwest Finland, Turku, Finland	Clinical Groups	Gastroenterology Group
