

SUPPLEMENTARY MATERIAL

Supplementary Figure 1: Time-scaled phylogeographic trees of SARS-CoV-2 XBB* lineages. **a.** XBB.1.4.2 ($n = 131$), **b.** XBB.1.5.102 ($n = 1,274$). The trees are colored in accordance with the reconstructed location of their internal nodes and following the color code on the right side of each panel. Key lineages in each tree are named by labels on the right side of each panel, which also contains their posterior state probability of emergence in Brazil. Each of these trees is accompanied by maps illustrating their prevalence across Brazil's five geographical regions: N (North), NE (Northeast), CW (Central-West), SE (Southeast), and S (South). Maps were generated with QGIS v.3.10.2 software (<http://qgis.org>) using public access data downloaded from the GADM v.3.6 database (<https://gadm.org>) and shapefiles obtained from the Brazilian Institute of Geography and Statistics (<https://portaldemapas.ibge.gov.br/portal.php#homepage>).

Supplementary Figure 2: Time-scaled phylogeographic trees of SARS-CoV-2 XBB* lineages. **a.** XBB.1.5.86/HA.1 ($n = 991$). **b.** XBB.1.18.1/FE.1 ($n = 1,544$). The trees are colored in accordance with the reconstructed location of their internal nodes and following the color code on the right side of each panel. Key lineages in each tree are named by labels on the right side of each panel, which also contains their posterior state probability of emergence in Brazil. Each of these trees is accompanied by maps illustrating their prevalence across Brazil's five geographical regions: N (North), NE (Northeast), CW (Central-West), SE (Southeast), and S (South). Maps were generated with QGIS v.3.10.2 software (<http://qgis.org>) using public access data downloaded from the GADM v.3.6 database (<https://gadm.org>) and shapefiles obtained from the Brazilian Institute of Geography and Statistics (<https://portaldemapas.ibge.gov.br/portal.php#homepage>).

Supplementary Figure 3: Time-scaled phylogeographic trees of SARS-CoV-2 XBB* lineages. **a.** FE.1.1 ($n = 1,251$), **b.** FE.1.2 ($n = 1,047$). The trees are colored in accordance with the reconstructed location of their internal nodes and following the color code on the right side of each panel. Key lineages in each tree are named by labels on the right side of each panel, which also contains their posterior state probability of emergence in Brazil. Each of these trees is accompanied by maps illustrating their prevalence across Brazil's five geographical regions: N (North), NE (Northeast), CW (Central-West), SE (Southeast), and S (South). Maps were generated with QGIS v.3.10.2 software (<http://qgis.org>) using public access data downloaded from the GADM v.3.6 database (<https://gadm.org>) and shapefiles obtained from the Brazilian Institute of Geography and Statistics (<https://portaldemapas.ibge.gov.br/portal.php#homepage>).

Supplementary Figure 4: Time-scaled phylogeographic trees of SARS-CoV-2 XBB* lineages. *a.* XBB.1.5.70/GK.1*/JD.1*/JD.1.2 ($n = 691$). The tree is colored in accordance with the reconstructed location of its internal nodes and following the color code on the right side of the panel. Key lineages in each tree are named by labels on the right side of each panel, which also contains their posterior state probability of emergence in Brazil. Each of these trees is accompanied by maps illustrating their prevalence across Brazil's five geographical regions: N (North), NE (Northeast), CW (Central-West), SE (Southeast), and S (South). Maps were generated with QGIS v.3.10.2 software (<http://qgis.org>) using public access data downloaded from the GADM v.3.6 database (<https://gadm.org>) and shapefiles obtained from the Brazilian Institute of Geography and Statistics (<https://portaldemapas.ibge.gov.br/portal.php#homepage>).

Supplementary Table 1: Major Brazilian SARS-CoV-2 Omicron XBB* lineages.

XBB Group	Pango Lineage	N	Sampling Range	T _{MRC} A (95% HPD)	aLRT	Root (PSP)

The table details the space-time dynamics of autochthonous XBB* Brazilian lineages and their descendants. For better comprehension of their ancestry, selected lineages have been partially aliased. All lineages are accompanied by (i) the number of sequences in the phylogeographic reconstruction; (ii) sampling range; (iii) T_{MRC}A and corresponding 95% HPD; (iv) statistical support (aLRT) in the original maximum likelihood topology; (v) most probable location of their MRCA, and its statistical support (PSP). NA: North America, BR: Brazil.
