Table 1

Correlations between study (internalizing and externalizing problems before and after treatment) and control (child's age at start of treatment, treatment duration, sex of both the child and informant) variables

	1	2	3	4	5	6	7	8
1. Internalizing problems before treatment (<i>T</i> score)	-							
2. Internalizing problems after treatment (<i>T</i> score)	.64 ^B	-						
3. Externalizing problems before treatment (<i>T</i> score)	.49 ^B	.37 ^B	-					
4. Externalizing problems after treatment (<i>T</i> score)	.36 ^B	.61 ^B	.71 ^B	-				
5. Age at start of treatment	.07 ^A	.11 ^B	.10 ^B	.13 ^B	-			
6. Treatment duration (days)	.02	-.02	-.08 ^B	-.08 ^B	-.27 ^B	-		
7. Sex of child	.10 ^B	.04	-.05	-.05	-.002	0.02	-	

8. Sex of informant	.09 ^B	.05	.12 ^B	.06 ^A	-.01	-.01	-.02	-
---------------------	------------------	-----	------------------	------------------	------	------	------	---

Note: ^A $p < .05$; ^B $p < .001$
