

S1. Supplementary Material – Summary statistics

Figure S1 - Directed Acyclic Graph of hypothesised causal structure.

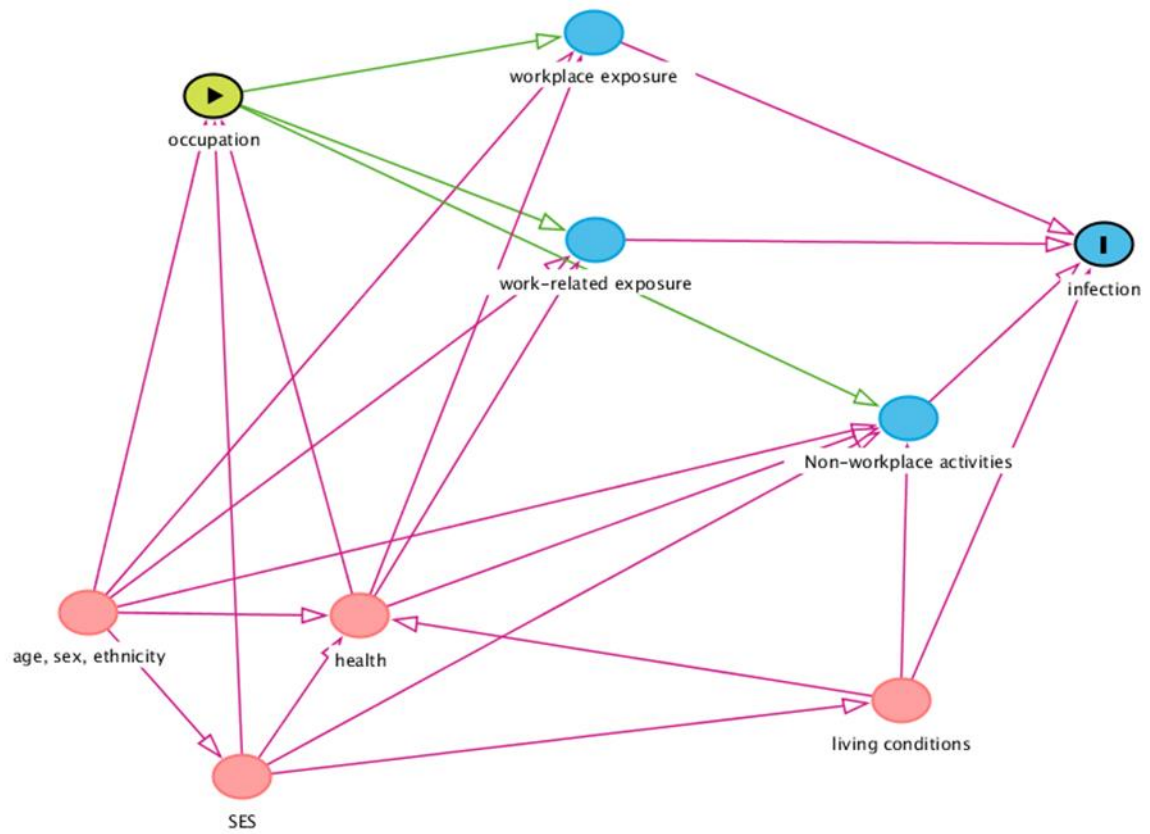

Table S1 - Summary of the longitudinal cohort studies within the UK-LLC

Study ID	Full Study Name	Description	First Survey	Last Survey	Number of pandemic Survey Waves used
ALSPAC	Avon Longitudinal Study of Parents and Children	The children (and some of their mothers) of women who were pregnant between Apr 1991 Dec 1992 in South West England. ^{18 19}	Apr-May 20	Nov20-Mar21	4
BCS70*	British Cohort Study 1970	Children born in the UK in one week in 1970, with regular follow-up surveys from birth. ²⁰	May-20	Feb/Mar-21	3
BIB	Born in Bradford	Pregnant women (& partners) recruited at Royal Bradford Infirmary between 2007-2011. ^{21 22}	Apr-Jun 20	Oct-Dec 20	2
COPING	COVID-19 Psychiatry and Neurological Genetics Study	Aged 16+ recruited from existing cohorts hosted by NIHR BioResource (GLAD, the Eating Disorders Genetics Initiative (EDGI)). ²³	Apr-20	Apr-20	1
ELSA	English Longitudinal Study of Ageing	Nationally representative pop aged 50+, in private households in England, includes biennial surveys, periodic refreshing of sample. ²⁴	June/Jul 2020	Nov/Dec 2020	2
EXCEED	Extended Cohort for E-health, Environment and DNA	Cohort aged 40-69 recruited 2013+, from the general population through general practices in Leicestershire and Rutland. ^{25 26}	Apr 21	Apr 21	1
GENSCOT	Generation Scotland	A family-based genetic epidemiology study of volunteers from across Scotland, aged 18+. ²⁷	May-20	Mar-21	3
GLAD	Genetic Links to Anxiety and Depression	Participants with depression and/or anxiety aged 16+, invited via media campaigns and recruited online into the NIHR BioResource. ²⁸	Apr-20	Apr-20	1
MCS*	Millennium Cohort Study	UK children born Sep 2000 - Jan 2002, with regular follow-up surveys from birth. ²⁹	May-20	Feb/Mar-21	3
NCDS58*	National Child Development Study 1958	UK Children born in one week in 1958, with regular follow-up surveys from birth. ³⁰	May-20	Feb/Mar-21	3
NextSteps*	Next Steps 1989	Recruited via secondary schools in England at age 13, regular follow-up surveys thereafter. ³¹	May-20	Feb/Mar-21	3
NICOLA	Northern Ireland Cohort for the Longitudinal Study of Ageing	aged 50+, recruited 2012+. Randomized sample of NI addresses from Business Service Organization (BSO) GP Register Database. ³²	Feb-Mar 20	Feb-Mar 20	1
TWINSUK	Twins UK study	Volunteer adult twins (55% monozygotic/43% dizygotic) from UK aged 18+. ³⁴	Apr-May 20	Oct-Nov 20	3
UKHLS	The UK Household Longitudinal Study (Understanding Society)	A nationally representative longitudinal household panel survey, based on a clustered-stratified probability sample of UK households, with participants surveyed annually. ³⁵	Apr-20	Mar-21	8

*Age homogenous cohorts: participants all born in the same year or week of the same year

Table S2 - List of the models tested in the study with exposure modalities and sample subsets.

Model	Exposure	Modalities	Sample subset
1	Unemployed	(1) Unemployed	All respondents aged 18-66
		(0) Employed	
	Retired	(1) Retired	
		(0) Employed	
2	Part-time	(1) Part-time	
		(2) Full-time	
	Employed not working	(1) Employed but not working	
		(0) Full-time	
	Unemployed	(1) Unemployed	
		(0) Full-time	
	Retired	(1) Retired	
		(0) Full-time	
3	Key worker	(1) key worker	Respondents employed aged 18-66 i.e. self-defined as employed, self-employed, or looking for work
		(0) Not key worker	
4	Partial home working	(1) Partial home working	
		(0) no home working	
	No home working	(1) Full-time home working	
		(0) no home working	
5	Furlough	(1) Furlough	
		(0) Not Furlough	

Table S3 – COVID-19 Infection summary statistics by cohort study

Study/Sub-Cohort	Self-report infection		Self-report Positive Test Only		Linked Positive Test		Total Responses	No Individuals

INTRODUCTION

The [UK LLC Publication Policy](#) describes the **requirements** for researchers when publishing **papers and similar outputs (such as reports, books and other manuscripts)** based on data accessed in the UK LLC Trusted Research Environment (TRE).

More than 20 LPS provide data to the UK LLC TRE and researchers **must** acknowledge each LPS included in the analyses that underpin their publications – **see the [UK LLC Publication Policy](#) for the required wording for your Methods and Acknowledgements sections.**

The information in the tables below has been provided by the LPS. Copy the information about each LPS that has contributed to your research and include it in the **Supplementary Materials** section of your publication – **you do not have to present the information in table format.**

LPS INFORMATION (LPS listed in alphabetical order)

ALSPAC: Avon Longitudinal Study of Parents and Children	
Description of Study Population (including citations and references if required)	<p>Pregnant women resident in a defined area of the former county of Avon, UK with expected dates of delivery 1st April 1991 to 31st December 1992 were invited to take part in the study ^{1,2}. The initial number of pregnancies enrolled is 14,541 (14,676 fetuses), resulting in 14,062 live births and 13,988 children who were alive at 1 year of age. Further recruitment took place after the age of 7 years, the total sample size for analyses using any data collected after the age of 7 is therefore 15,454 pregnancies, resulting in 15,589 fetuses. Of these 14,901 were alive at 1 year of age.</p> <p>¹Boyd A, Golding J, Macleod J, Lawlor DA, Fraser A, Henderson J, Molloy L, Ness A, Ring S, Davey Smith G. Cohort Profile: The 'Children of the 90s'; the index offspring of The Avon Longitudinal Study of Parents and Children (ALSPAC). <i>International Journal of Epidemiology</i> 2013; 42: 111-127.</p> <p>²Fraser A, Macdonald-Wallis C, Tilling K, Boyd A, Golding J, Davey Smith G, Henderson J, Macleod J, Molloy L, Ness A, Ring S, Nelson SM, Lawlor DA. Cohort Profile: The Avon Longitudinal Study of Parents and Children: ALSPAC mothers cohort. <i>International Journal of Epidemiology</i> 2013; 42:97-110.</p>
Acknowledgements	We are extremely grateful to all the families who took part in this study, the midwives for their help in recruiting them, and

	the whole ALSPAC team, which includes interviewers, computer and laboratory technicians, clerical workers, research scientists, volunteers, managers, receptionists and nurses.
Ethics	Ethical approval for the study was obtained from the ALSPAC Law and Ethics committee and local research ethics committees (NHS Haydock REC: 10/H1010/70).

BCS70: 1970 British Cohort Study	
Description of Study Population (including citations and references if required)	<p>The 1970 British Cohort Study (BCS70) follows the lives of more than 17,000 people born in England, Scotland and Wales in a single week of 1970. Over the course of cohort members' lives, BCS70 has collected information on health, physical, educational and social development, and economic circumstances, among other factors.</p> <p>Since the birth survey in 1970, there have been nine 'sweeps' of all cohort members at ages 5, 10, 16, 26, 30, 34, 38, 42 and most recently at 46 (a biomedical data collection). The Age 51 Sweep is currently in the field (2022).</p> <p>Data have been collected from a number of different sources, including the midwife present at birth, parents of the cohort members, head and class teachers, school health service personnel and the cohort members themselves.</p> <p>The data have been collected in a variety of ways, including via paper and electronic questionnaires, clinical records, medical examinations, biological samples, physical measurements, tests of ability, educational assessments and diaries.</p>

	The study is conducted by the Centre for Longitudinal Studies.
Acknowledgements	BCS70 is core-funded by the ESRC.
Ethics	Ethics approval has been obtained for each follow-up from an NHS Research Ethics Committee (REC) since 2000. In addition, separate REC approval is in place to cover the ongoing activities of the study in between major sweeps of data collection (i.e. Keeping in touch with and tracing cohort members; cleaning, documenting and providing access to the data for research; and linking data from administrative sources to survey data to increase the utility of the data for research).

BIB: Born in Bradford	
Description of Study Population (including citations and references if required)	<p>Born in Bradford (BiB) is a prospective pregnancy and birth cohort study of the children, mothers and fathers from 13,776 pregnancies from between 2007 and 2011, based in Bradford, UK. The study was established to examine how genetic, nutritional, environmental, behavioural and social factors affect health and development during childhood, and subsequently, adult life in a deprived multi-ethnic population¹. From 2017 to 2021 a full follow-up of the cohort was conducted² to investigate the determinants of children's pre-pubertal health and development, including through understanding parents' health and wellbeing, and to obtain data on exposures in childhood that might influence future health. In 2022, the Age of Wonder study was launched to complete another full follow-up through adolescence into adulthood, focusing on priority areas of physical and mental health, growth, identity, cognition, socioeconomic status and environmental exposures.</p> <p>¹John Wright, Neil Small, Pauline Raynor, Derek Tuffnell, Raj Bhopal, Noel Cameron, Lesley Fairley, Debbie A Lawlor, Roger Parslow, Emily S Petherick, Kate E Pickett, Dagmar</p>

	<p>Waiblinger, Jane West, on behalf of the Born in Bradford Scientific Collaborators Group, Cohort Profile: The Born in Bradford multi-ethnic family cohort study, International Journal of Epidemiology, Volume 42, Issue 4, August 2013, Pages 978–991, https://doi.org/10.1093/ije/dys112</p> <p>²Bird, P.K., McEachan, R.R.C., Mon-Williams, M. et al. Growing up in Bradford: protocol for the age 7–11 follow up of the Born in Bradford birth cohort. BMC Public Health 19, 939 (2019). https://doi.org/10.1186/s12889-019-7222-2</p>
<p>Acknowledgements</p>	<p>Born in Bradford has received funding from the Wellcome Trust [101597/Z/13/Z and 223601/Z/21/Z]; a joint grant from the UK Medical Research Council (MRC) and UK Economic and Social Science Research Council (ESRC) [MR/N024391/1; a British Heart Foundation Clinical Study grant [CS/16/4/32482]; the National Institute for Health Research under its Applied Research Collaboration Yorkshire and Humber [NIHR200166]; and a Health Foundation COVID-19 Award [2301201]. Born in Bradford is only possible because of the enthusiasm and commitment of the Children and Parents in BiB. We are grateful to all the participants, health professionals, schools and researchers who have made Born in Bradford happen.</p> <p>NMR metabolomics data – additional acknowledgement</p> <p>Researchers who use the NMR metabolomics data should cite the following data note: https://wellcomeopenresearch.org/articles/5-264</p> <p>The funding acknowledgement should be: Funding for the metabolomics analyses in BiB has been provided by the US National Institutes of Health [R01 DK10324]; the European Research Council (ERC) under the European Union’s Seventh Framework Programme [FP7/2007-2013] / ERC grant agreement no 669545; and the UK Medical Research Council [MC_UU_00011/6].</p>

ELSA: English Longitudinal Study of Ageing

Description of Study Population (including citations and references if required)	<p>The English Longitudinal Study of Ageing (ELSA) is a unique and rich resource of information on the dynamics of health, social, wellbeing and economic circumstances in the English population aged 50 and older¹.</p> <p>The original sample was drawn from households that had previously responded to the Health Survey for England (HSE) between 1998 and 2001. The main fieldwork began in March 2002. The same group of respondents have been interviewed at two-yearly interviews .</p> <p>¹Banks J, Batty GD, Breedvelt JJF, Coughlin K, Crawford R, Marmot M, Nazroo J, Oldfield Z, Steel N, Steptoe A, Wood M, Zaninotto P (2021) English Longitudinal Study of Ageing: Waves 0-9, 1998-2019</p>
Acknowledgements	<p>The English Longitudinal Study of Ageing was developed by a team of researchers based at University College London, NatCen Social Research, the Institute for Fiscal Studies, the University of Manchester and the University of East Anglia. The data were collected by NatCen Social Research. The funding is currently provided by the National Institute on Aging (Ref: R01AG017644) and by a consortium of UK government departments: Department for Health and Social Care; Department for Transport; Department for Work and Pensions, which is coordinated by the National Institute for Health Research (NIHR, Ref: 198-1074). Funding has also been provided by the Economic and Social Research Council (ESRC).</p>

EXCEED: Extended Cohort for E-Health, Environment and DNA	
Description of Study Population (including citations and references if required)	<p>EXCEED is a longitudinal population-based cohort which facilitates investigation of genetic, environmental and lifestyle-related determinants of a broad range of diseases and of multiple morbidity through data collected at baseline and via electronic healthcare record linkage. Recruitment has taken place in Leicester, Leicestershire and Rutland since 2013 and is ongoing, with 11,000 participants. Recruitment was widened to anyone over 18 years of age living in the Midlands in 2020. Participants provided a DNA sample, have consented to follow-up for up to 25 years through electronic health records and additional bespoke data collection is planned. Data available includes baseline demographics, anthropometry, spirometry, lifestyle factors (smoking and alcohol use) and longitudinal health information from primary care records, with additional linkage to other EHR datasets planned. Patients have consented to be contacted for recall-by-genotype and recall-by-phenotype sub-studies. Further details about the study can be accessed in the Cohort Profile Paper¹, with additional information about our COVID-19 Focus available as a Data Note Paper²</p> <p>¹Catherine John, Nicola F Reeve, Robert C Free, [...] Edward J Hollox, Louise V Wain, Martin D Tobin. MCS: Millennium Cohort Study	
<p>Description of Study Population (including citations and references if required)</p>	<p>The Millennium Cohort Study (MCS) is following the lives of young people born across England, Scotland, Wales and Northern Ireland in 2000-02. The study began with an original sample of 18,818 cohort members. The study is designed and led by the Centre for Longitudinal Studies (CLS) at University College London.</p> <p>The broad aim of the study is to examine the impact that circumstances and experiences at one stage of life have on outcomes and achievements in later life. Since the baseline survey at age 9 months, there have been six major ‘sweeps’ at ages 3, 5, 7, 11, 14 and 17. The next sweep, at age 22, is currently under development.</p> <p>Data have been collected from a number of different sources, including the cohort members and their parents and teachers. The data have been collected in a variety of ways, including via paper and electronic questionnaires, biological samples, physical measurements, tests of ability, and linked educational attainment and health records.</p> <p>The information collected forms a high quality data resource for scientific investigations across a full range of domains of individuals’ lives and across different points in time in them. The study has been designed to ensure comparability with other major cohort studies both in the UK and internationally and to permit the examination of links between social change and the changing experiences of different cohorts.</p> <p>https://www.llcsjournal.org/index.php/llcs/article/view/410/0</p> <p>https://academic.oup.com/ije/article/43/6/1719/703283</p>
<p>Acknowledgements</p>	<p>MCS is core-funded by the ESRC and co-funded by a consortium of government departments.</p>

Ethics	Ethics approval has been obtained for each follow-up from an NHS Research Ethics Committee (REC). In addition, separate REC approval is in place to cover the ongoing activities of the study in between major sweeps of data collection (i.e. Keeping in touch with and tracing cohort Members; cleaning, documenting and providing access to the data for research and linking data from administrative sources to survey data to increase the utility of the data for research.

NCDS: National Child Development Study

Description of Study Population
(including citations and references if required)

The National Child Development Study (NCDS) is a continuing longitudinal study that seeks to follow the lives of all those living in Great Britain who were born in one particular week in 1958. Conducted by the Centre for Longitudinal Studies, the aim of the study is to improve understanding of the factors affecting human development over the whole lifespan. It collects information on physical and educational development, economic circumstances, employment, family life, health behaviour, wellbeing, social participation and attitudes.

The broad aim of the study is to examine the impact that circumstances and experiences at one stage of life have on outcomes and achievements in later life. Since the birth survey in 1958, there have been ten 'sweeps' of all cohort members at ages 7, 11, 16, 23, 33, 42, 44/5 (a biomedical collection) 46, 50 and most recently at 55. The Age 62 Sweep is currently in the field (2022).

Data have been collected from a number of different sources, including the midwife present at birth, parents of the cohort members, teachers, doctors and the cohort members themselves. The data have been collected in a variety of ways, including via paper and electronic questionnaires, clinical records, medical examinations, biological samples, physical measurements, tests of ability and educational assessments.

The information collected forms a high quality data resource for scientific investigations across a full range of domains of individuals' lives and across different points in time in them. The study has been designed to ensure comparability with other major cohort studies and to permit the examination of links between social change and the changing experiences of different cohorts.

Next Steps	
Description of Study Population (including citations and references if required)	<p>Next Steps (previously known as the Longitudinal Study of Young People in England (LSYPE1)) is a major longitudinal study that follows the lives of around 16,000 people born in 1989-90. The first seven sweeps of the study (2004-2010) were funded and managed by the Department for Education and mainly focused on the educational and early labour market experiences of young people.</p> <p>The study began in 2004 and included young people in Year 9 who attended state and independent schools in England. Following the initial survey at age 13-14, the cohort members were interviewed every year until 2010.</p> <p>In 2013 the management of Next Steps was transferred to the Centre for Longitudinal Studies (CLS) at the IOE, UCL's Faculty of Education and Society. The first sweep conducted by CLS aimed to find out how the lives of the cohort members had turned out at age 25. It maintained the strong focus on education, but the content was broadened to become a more multi-disciplinary research resource.</p> <p>The Age 32 Sweep is currently in the field (2022).</p>

NICOLA: Northern Ireland Cohort for the Longitudinal Study of Ageing	
Description of Study Population (including citations and references if required)	<p>NICOLA is a large-scale longitudinal study in Northern Ireland designed to investigate ageing.</p> <p>Set up in 2013 the study visited households where at least one member was ≥ 50 years old and in its first wave recruited a representative sample of 8478 men and women living in private residential accommodation in Northern Ireland.</p>

	<p>Wave 1 Data collection involved four components; a computer assisted face-to-face home interview, a self-completion questionnaire, a health assessment (during which blood and urine samples were collected) and subsequently a dietary questionnaire.</p> <p>The participants who consented to follow up for Wave 2 were asked to complete a 2nd home survey and self-completion questionnaire approximately 3.5 years later. From these participants 5925 did not opt-out of additional linkage and were therefore in addition mailed a Covid questionnaire (3149 completed)</p> <p>Neville CE, Cruise SM; Burns F. (2019). The Northern Ireland Cohort for the Longitudinal Study of Ageing (NICOLA). In Gu D, Dupre M. (Ed.), Encyclopedia of Gerontology and Population Aging Cham: Springer.</p>
<p>Acknowledgements</p>	<p>We are grateful to all the participants of the NICOLA Study, and the whole NICOLA team.</p> <p>The study has received funding from The Atlantic Philanthropies, the Economic and Social Research Council, the UKCRC Centre of Excellence for Public Health Northern Ireland, the Centre for Ageing Research and Development in Ireland, the Office of the First Minister and Deputy First Minister, HSC Research and Development Division of the Public Health Agency, the Wellcome Trust/Wolfson Foundation and Queen’s University Belfast which provide core financial support for NICOLA. The authors alone are responsible for the interpretation of the data and any views or opinions presented are solely those of the authors and do not necessarily represent those of the NICOLA Study team.</p>
<p>Ethics</p>	<p>Ethical approval for NICOLA was obtained from the School of Medicine, Dentistry and Biomedical Sciences Ethics Committee, Queen’s University Belfast.</p>

NIHR BioResource: National Institute of Health Research BioResource COVID-19 Psychiatry and Neurological Genetics (COPING) Study

Description of Study Population
(including citations and references if required)

The NIHR BioResource is a recallable resource of over 200,000 volunteers from the general population, and patients with rare and common diseases. Participants provide information about their health and lifestyle, together with biological samples, including DNA, and consent for access to their health records and for re-contact. The BioResource is one of four key infrastructures supporting population level genomic projects in the UK Life Science Industrial Strategy. Key unique features of the NIHR BioResource are its focus on recall of participants for experimental medicine studies by genotype and/or phenotype, and the inclusion of both healthy volunteers and patients with common and rare diseases. Participants represented in UK LLC are respondents to an online recall study, the Covid-19 Psychiatry and Neurological Genetics (COPING) study¹.

TwinsUK	
Description of Study Population (including citations and references if required)	TwinsUK is the largest adult twin registry in the UK and the most clinically detailed in the world. The national, population-based study was founded in 1992 and aims to investigate the genetic and environmental basis of a range of complex diseases and conditions. TwinsUK currently consists of over 15,700 volunteer adult twins (both monozygotic and dizygotic) who are between 18 to 104 years of age from around the UK (mean

	<p>age 59)¹. The cohort is predominantly female, and disease prevalence is broadly reflective of the UK population. Over 700,000 biological samples and extensive phenotypes have been collected longitudinally over 30 years.</p> <p>¹Verdi S, Abbasian G, Bowyer RCE, et al.: TwinsUK: The UK Adult Twin Registry Update. <i>Twin Res Hum Genet.</i> 2019; 22(6): 523–529.</p>
Acknowledgements	<p>We thank TwinsUK members for their participation and the TwinsUK operations team for coordinating and undertaking twin clinic visits and data and sample collections.</p> <p>TwinsUK is funded by the Wellcome Trust, Medical Research Council, Versus Arthritis, European Union Horizon 2020, Chronic Disease Research Foundation (CDRF), Zoe Ltd, the National Institute for Health and Care Research (NIHR) Clinical Research Network (CRN) and Biomedical Research Centre based at Guy's and St Thomas' NHS Foundation Trust in partnership with King's College London.</p>
Ethics	<p>All collections of TwinsUK data have received ethical approval associated with TwinsUK Biobank (19/NW/0187), TwinsUK (EC04/015) or Healthy Ageing Twin Study (H.A.T.S) (07/H0802/84) from NHS Research Ethics Committees. Linkage to health and environmental records is also covered by approval from the Health Research Authority (19/CAG/0223).</p>

Understanding Society – the UK Household Longitudinal Study

Description of Study Population (including citations and references if required)	<p>Understanding Society, the UK Household Longitudinal Study, is a longitudinal survey of the members of ~40,000 households (at Wave 1, 2009-10) in the United Kingdom. The survey sample consists of a large General Population Sample (~26,000</p>
--	---

	<p>households) plus three other components: the Ethnic Minority Boost Sample (~4,000 households), the former British Household Panel Survey sample (~8,000 households) and the Immigrant and Ethnic Minority Boost Sample (~2,900 households, added at Wave 6). Household and individual interviews are conducted annually. The study is multi-topic and multi-purpose.</p> <p>From April 2020 to September 2021, participants from the main Understanding Society sample were asked to complete nine short web-surveys (with a telephone option in some months). The COVID-19 study covered the changing impact of the pandemic on the welfare of UK individuals, families and wider communities. ~18,000 individuals provided a full or partial interview at Wave 1 (April 2020).</p> <p>At Wave 8 of the COVID-19 study, 8477 participants provided consent to link their survey data to administrative health records.</p>
<p>Acknowledgements</p>	<p>Understanding Society is an initiative funded by the Economic and Social Research Council and various Government Departments, with scientific leadership by the Institute for Social and Economic Research, University of Essex, and survey delivery by NatCen Social Research and Kantar Public</p> <p>The COVID-19 study (2020-2021) was funded by the Economic and Social Research Council and the Health Foundation. Serology testing was funded by the COVID-19 Longitudinal Health and Wealth – National Core Study. Fieldwork for the web survey was carried out by Ipsos MORI and for the telephone survey by Kantar.</p>
<p>Ethics</p>	<p>The University of Essex Ethics Committee has approved all data collection on Understanding Society main study, COVID-19 surveys and innovation panel waves, including asking consent for all data linkages except to health records.</p>

	Approval for asking consent for health record linkage and for the collection of blood and subsequent serology testing in the March 2021 wave of the COVID-19 study was obtained from London – City & East Research Ethics Committee (21/HRA/0644).
