1. PRISMA ScR Checklist

Preferred Reporting Items for Systematic reviews and Meta-Analyses extension for Scoping Reviews (PRISMA-ScR) Checklist.

Table s1: PRISMA-ScR Checklist			
Section	Item #	PRISMA-ScR Checklist item	Reported on page
TITLE			
Title	1	Identify the report as a scoping review.	1
ABSTRACT			
Structured summary	2	Provide a structured summary that includes (as applicable): background, objectives, eligibility criteria, sources of evidence, charting methods, results, and conclusions that relate to the review questions and objectives.	2
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of what is already known. Explain why the review questions/objectives lend themselves to a scoping review approach.	3-4
Objectives	4	Provide an explicit statement of the questions and objectives being addressed with reference to their key elements (e.g., population or participants, concepts, and context) or other relevant key elements used to conceptualize the review questions and/or objectives.	4
METHODS			
Protocol and registration	5	Indicate whether a review protocol exists; state if and where it can be accessed (e.g., a Web address); and if available, provide registration information, including the registration number.	4
Eligibility criteria	6	Specify characteristics of the sources of evidence used as eligibility criteria (e.g., years considered, language, and publication status), and provide a rationale.	4-5
Information sources*	7	Describe all information sources in the search (e.g., databases with dates of coverage and contact with authors to identify additional sources), as well as the date the most recent search was executed.	5
Search	8	Present the full electronic search strategy for at least 1 database, including any limits used, such that it could be repeated.	Supplementary Material
Selection of sources of evidence†	9	State the process for selecting sources of evidence (i.e., screening and eligibility) included in the scoping review.	5-6
Data charting process‡	10	Describe the methods of charting data from the included sources of evidence (e.g., calibrated forms or forms that have been tested by the team before their use, and whether data charting was done	6

Table s1: PRISMA-ScR Checklist			
Section	Item #	PRISMA-ScR Checklist item	Reported on page
		independently or in duplicate) and any processes for obtaining and confirming data from investigators.	
Data items	11	List and define all variables for which data were sought and any assumptions and simplifications made.	6, Supplementary material
Critical appraisal of individual sources of evidence§	12	If done, provide a rationale for conducting a critical appraisal of included sources of evidence; describe the methods used and how this information was used in any data synthesis (if appropriate).	n.a.
Synthesis of results	13	Describe the methods of handling and summarizing the data that were charted.	6
RESULTS			
Selection of sources of evidence	14	Give numbers of sources of evidence screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally using a flow diagram.	7
Characteristics of sources of evidence	15	For each source of evidence, present characteristics for which data were charted and provide the citations.	Characteristics of included studies Tables A, B, C
Critical appraisal within sources of evidence	16	If done, present data on critical appraisal of included sources of evidence (see item 12).	n.a.
Results of individual sources of evidence	17	For each included source of evidence, present the relevant data that were charted that relate to the review questions and objectives.	n.a.
Synthesis of results	18	Summarize and/or present the charting results as they relate to the review questions and objectives.	8-12
DISCUSSION			
Summary of evidence	19	Summarize the main results (including an overview of concepts, themes, and types of evidence available), link to the review questions and objectives, and consider the relevance to key groups.	13-15
Limitations	20	Discuss the limitations of the scoping review process.	13
Conclusions	21	Provide a general interpretation of the results with respect to the review questions and objectives, as well as potential implications and/or next steps.	15
FUNDING			
Funding	22	Describe sources of funding for the included sources of evidence, as well as sources of funding for the scoping review. Describe the role of the funders of the scoping review.	16

4. Data extraction sheet

Study information:

- Study ID
- Study title
- Publication year

Study design:

- Study type (e.g. Impact study, Formative research, Process evaluation, Feasibility study)
- Study design (e.g. Quantitative, Qualitative, Mixed-Methods, Other (like conceptual))
- Methodological approach (e.g. Mathematical modelling, Experimental/ Quasi-experimental, Cross-sectional, Quantitative, Conceptual)
- Focus of the study (e.g. Health, Sustainability, Both)
- Main objective of the study

Setting:

- Country
- Setting (e.g. University, College, Vocational School)
- Place of intervention (e.g. Canteen/ Cafeteria, Kiosk, Café, vending machine, Campus-wide, In-class)

Intervention:

- Was an actual intervention implemented?
- Main objective of the intervention (e.g. promotion of healthy diet, promotion of sustainable diet, food waste reduction, sustainable food services)
- Detailed objective of the study (e.g. Less plastic/Packaging/ other waste, better energy efficiency, better recycling / composting, improve sourcing practise, healthy diets in general, increase fruit & vegetable intake, increased whole grain intake, lower energy intake, reduced sugar intake, reduced sodium intake, reduced fat intake, reduced intake of animal-based foods, reduced carbon footprint diet, reduce water footprint, Less pre consumer food waste, less post-consumer food waste)
- NOURISHING framework category
- Length of the intervention
- Short description

Outcomes (repeated for each outcome):

- Outcome category (e.g. diet quality, diet related health outcomes, mental health outcomes, sustainability outcomes, Acceptability, Feasibility, Uptake, Implementation fidelity, Views on potential intervention(s), Economic)
- Description of outcome
- Outcome attributable to measures (yes/no)
- Level on which outcome is assessed (i.e. students, teachers, staff, wider community, general population)
- Affected / studied population
- Number of participants
- Number of plates / food or drink items sold
- Length of follow-up
- Direction of the effect as judged by the study authors
- Narrative summary

5. List of excluded studies

We have listed excluded studies that we deemed potentially interesting to readers in this table. These studies were excluded primarily because they closely aligned with our inclusion criteria but not entirely, prompting extensive discussions within our review team during the screening process.

Study ID	Study title	Reason for exclusion	Explanation
Rojas 2007	University of British Columbia Food System Project: Towards Sustainable and Secure Campus Food Systems	No intervention studied	Development of a tool (Life Cycle Assessment) that could be used to make food services more sustainable. However, the tool is not studied or tested

Schaubroeck 2018	A pragmatic framework to score and inform about the environmental sustainability and nutritional profile of canteen meals, a case study on a university canteen	No intervention studied	Development of a tool to score canteen meals, that could be used to make food services more sustainable. However, the tool is not studied or tested
Roy 2021	Effectiveness of price-reduced meals on purchases among university young adults	Wrong focus	The intervention (price reduced meals) does not aim to promote healthy or sustainable diets, but to alleviate food insecurity
Sato 2020	Efforts to reduce food loss in restaurants and to assess consumer awareness in japan	No intervention studied	No evaluation of a study. Only assesment of the food waste at the moment and suggestion of possibl interventions
Sherry 2022	Reducing the environmental impact of food service in universities using life cycle assessment	No intervention studied	Development of a tool (Life Cycle Assesment) that could be used to make food services more sustainable. However, the tool is not studied or tested
Wongprawmas 2022	Strategies to Promote Healthy Eating Among University Students: A Qualitative Study Using the Nominal Group Technique	No intervention studied	No evaluation of an intervention. Only assessment of the eating behaviour at the moment and suggestion of possible interventions
Wang 2023	What influences students' food waste behaviour in campus canteens?	No intervention studied	Influences on the intention to reduce waste is studied, no intervention
Deliberador 2021	Food waste: evidence from a university dining hall in brazil	No intervention studied	Measurement of current food waste, based on this suggestion of measures.
Frank 2020	"Free food on campus!": Using instructional technology to reduce university food waste and student food insecurity	Wrong setting	It is about food waste reduction at catered events taking place at the university, not the regular food service operation
Freedman 2011	Point-of-Purchase Nutrition Information Influences Food-Purchasing Behaviors of College Students: A Pilot Study	Wrong setting	Study takes place in a supermarket that happened to be on campus
Holligan 2017	Design of Nudge-Based Interventions for Increasing Vegetable Intake in Emerging Adults within On-Campus Dining Sites	No intervention studied	This study is about the process of designing a nudge. The nudge itsels is not tested.
Maher 2017	Experiential learning for engaging nutrition undergraduates with sustainability	Wrong setting	A class that is taking place at university. However there is no connection to the food service

Mann 2021	Development of the University Food Environment Assessment (Uni-Food) Tool and Process to Benchmark the Healthiness, Equity, and Environmental Sustainability of University Food Environments	No intervention studied	Development of a tool (Life Cycle Assesment) that could be used to make food services more sustainable. However, the tool is not studied or tested
Middha 2021	Pop-up food provisioning as a sustainable third space: reshaping eating practices at an inner urban university	Wrong focus	The study does look at pop-up food provisioning, but from an architecural point of view. No health or sustainability outcomes related to food are evaluated
Migliavada 2021	A three-year longitudinal study on the use of pre-ordering in a university canteen	Wrong focus	The intervention does not have "healthy or sustainable diet or food services" as its aim. There is one outcome of "amount of food waste", however it is not compared to the non-pre ordering system, therefore there is no evaluation of the intervention in this point
Monroe 2015	The Green Eating Project: web-based intervention to promote environmentally conscious eating behaviours in US university students	Wrong setting	No connection to the university food service
Painter 2016	Food waste generation and potential interventions at Rhodes University, South Africa	No intervention studied	No evaluation of an intervention. Only assessment of the food system at the moment and suggestion of possible interventions
Roys 2016	The Effect of Energy Labelling on Menus and a Social Marketing Campaign on Food-Purchasing Behaviours of University Students	Wrong setting	A restaurant on campus
Skelton 2020	A Qualitative Investigation of College Student Perceptions of Their Nutrition Environment: Recommendations for Improvement	No intervention studied	Focus group discussion about the food environment at the moment. Only recommendations for interventions are made, no intervention evaluated
Ulfin 2020	Monitoring the quality of the cooking oil and raw foods used in canteens in Sepuluh Nopember Institute of Technology to achieve health stalls	Wrong focus	The aim of the study is not really to promote healthier food environments. They simply did a few tests to find out wether the cooking oil meets the national standards.

6. Differences between protocol and review

This study is based on a protocol developed and prospectively registered and published online through the Open Science Framework (registration DOI <https://doi.org/10.17605/OSF.IO/CM8VA> before data were analyzed. In the following, we describe differences between the protocol and the manuscript:

- We report a slight deviation from our study protocol regarding the inclusion criteria for study designs. We planned to include all study designs (RCTs, observational studies, modeling studies, systematic reviews, scoping reviews, conceptual studies, commentaries, editorials, etc.) but deviated from this approach due to the to a very large number of studies identified. Therefore, we decided to include only primary studies and excluded summaries of evidence (systematic, scoping or narrative reviews).
- In the protocol we planned on doing snowball searches for all included studies. Due to feasibility reasons, we did not manage to do this step. We did, however, in the beginning conduct forward and backward searches in relevant reviews and potentially eligible studies known to the authors.
- Further, we deviated from our published protocol by not presenting our results graphically using Harvest Plots or Effect Direction Plots, as anticipated, as we felt our results were adequately depicted using the abovementioned table using the modified NOURISHING framework and EGM.
