Title:

“The Ecology of Human Sleep (EcoSleep) Project: Protocol for a longitudinal cohort repeated-measurement-burst study to assess the relationship between sleep determinants and sleep outcomes under real-world conditions across time of year”

Light exposure variables					
Nocturnal light exposure = average light exposure during the last active 5-h period	L5_light	Numeric	LightLogR [1]	ActLumus	Continuously for 3 days/month (30 s resolution)
Daytime light exposure = average light exposure during the most active 10-h period	L10_light	Numeric	LightLogR [1]	ActLumus	Continuously for 3 days/month (30 s resolution)
Time above threshold (>XXX lux)	TAT_XXX	Numeric (minutes)	LightLogR [1]	ActLumus	Continuously for 3 days/month (30 s resolution)
Mean light above threshold	MLit ^{xxx}	Numeric (minutes since midnight)	Average clock time of all aggregated data points above XXX lux LightLogR [1]	ActLumus	Continuously for 3 days/month (30 s resolution)
Melanopic EDI	mel_EDI	Numeric (lux)	LightLogR [1]	ActLumus	Continuously for 3 days/month (30 s resolution)

Supplementary Table 1. Overview of light exposure quantifications. XXX is a placeholder for the desired threshold, e.g., 500 lux.
