As mentioned, in case of multifaceted exposure, we chose the higher prevalence rate. As some soldiers reside in regions exhibiting elevated PTSD risk compared to their military service risk, (i.e., groups 1, 2,4), their relative parts of the Israeli population (group 1 – 0.41%, 2 – 1.24%, 4 – 10.94%) have been subtracted from the soldiers' group and classified in the citizens' groups (670, 2,045 and 18,058 soldiers respectively, sum of 20,773 soldiers).</p>
