Values in the number (n) of MCI participants for which different data types were available and comparison between non-converter and converters, with t-student or χ^2 and linear regression adjusted for age, sex, and the presence of the APOE ε4 allele; numbers were used to describe categorical variables. mean ± standard deviation for continuous variables. After Bonferroni adjustment, the significant P value is set at 0.003. Abbreviations: MCI: mild cognitive impairment; eGFR, estimated glomerular filtration rate; sd, standard deviation.

Supplementary Table 3: Risk factors associated with conversion to dementia during follow up

Factors	n	HR Conversion (95%CI)	p	p adjusted (age, sex, ApoE)
Adiponectin	472	0.96 (1.02-1.02)	0.5870	0.2982
Fasting glycemia	439	0.97 (1.27-1.27)	0.1208	0.0540
Triglycerides	421	0.88 (1.64-1.64)	0.2389	0.1680
Cholesterol total	421	0.92 (1.24-1.24)	0.3886	0.1671
Cholesterol HDL	419	0.59 (1.17-1.17)	0.2824	0.8413
Cholesterol LDL	417	0.95 (1.34-1.34)	0.1835	0.1404
Creatinine	443	0.99 (1.01-1.01)	0.7844	0.5356
eGFR	444	0.99 (1.01-1.01)	0.9811	0.7385

Pearson's correlation coefficient in MCI participants (n) between clinical chemistry analytes and plasma pTau levels.

Supplementary Figure 1: Correlation between plasma pTau217, plasma pTau181 and hippocampal volume.

Legend:

Values of pTau217 (A) and pTau181 (B) in pg/mL were correlated with Hippocampal volume (R+L) (cm³). Pearson's correlation coefficient 'r' are indicated and they did not reach significance.

Supplementary Figure 2: Correlation between plasma pTau217 and pTau181 and CSF pTau181.

Legend:

Correlation between plasma pTau217 (Panel A) and pTau181 (Panel B) and CSF pTau181 in MCI according to amyloid status. Pearson's correlation coefficients 'r' were 0.49 (95% Confidence interval 0.38 to 0.58) and 0.37 (95% Confidence interval 0.26 to 0.48) for plasma pTau217 vs. CSF pTau181, and plasma pTau181 vs. CSF pTau181, respectively.

Supplementary Figure 3: Distribution of plasma pTau217 and pTau181 and ROC curves of plasma pTau217, plasma pTau181 and CSF pTau181 and CSF A β 42/40 in MCI according to conversion to AD.

Legend:

Values of pTau217 (A) and pTau181 (B) in pg/mL are represented in the conversion to AD (-) and (+) populations. (C) ROC curves of plasma pTau217, pTau181 and CSF pTau181 and Abeta42/40 in MCI according to conversion to AD. Respective AUC (95% Confidence interval): plasma pTau217: 0.722 (0.657 to 0.781), plasma pTau181 0.673 (0.606 to 0.736), CSF pTau181: 0.712 (0.646 to 0.771), and CSF A β 42/40: 0.733 (0.668 to 0.791).
