

Session	Description	Activities
Day 1		
1	Introduction and Orientation (45 minutes)	<ul style="list-style-type: none"> Welcome the youth researchers and provide an overview of the training agenda. Explain the purpose of the study and the significance of administering the PHQ-9, GAD-7, and HIV Stigma Scale accurately and sensitively. Discuss the ethical considerations and the importance of confidentiality and informed consent. Provide a detailed explanation of the PHQ-9, GAD-7, and HIV Stigma Scale. Go through each question in the scales, explaining their meaning and how to interpret the responses (e.g., Likert scale - strongly disagree to strongly agree).
2	Understanding the Scales (45 minutes)	<ul style="list-style-type: none"> Present examples of relevant studies where these scales were used and how they contributed to the research. Showcase a study that employed the HIV Stigma Scale to measure stigma experienced by people living with HIV in a particular region. Emphasize the importance of cultural sensitivity and understanding.
Day 2		
3	Demonstration (45 minutes)	<ul style="list-style-type: none"> Facilitators will conduct a demonstration of how to administer the PHQ-9, GAD-7, and HIV Stigma Scale to a mock participant. The demonstration will showcase the correct approach, demonstrating sensitivity and respect towards the participant's feelings and experiences. Researchers will observe the demonstration and take note of the proper techniques and communication skills used during the assessment.
4	Interview Techniques and Communication Skills (30 minutes)	<ul style="list-style-type: none"> Train the youth researchers in effective interview techniques, such as active listening, empathy, and non-judgmental attitudes. Teach them how to ask open-ended questions to encourage participants to share their responses more freely.
5	Handling Difficult Situations (20 minutes)	<ul style="list-style-type: none"> Discuss potential challenging scenarios during interviews, such as emotional distress or disclosure of sensitive information. Provide guidance on how to offer support, express empathy, and refer participants to mental health professionals if necessary.
6	Group Practice and Discussion (45 minutes)	<ul style="list-style-type: none"> Youth researchers engage in hands-on group practice to improve their interview skills in administering the PHQ-9, GAD-7, and HIV Stigma Scale. They are divided into groups of three, taking turns as the interviewer, interviewee (role-playing as a young person living with HIV), and observer. After the practice rounds, researchers discuss their experiences and receive feedback from facilitators to enhance their communication and interview techniques.
7	Data Recording and Documentation (5 minutes)	<ul style="list-style-type: none"> Instruct the youth researchers on proper data recording procedures. Emphasize the importance of accurate and complete data collection to ensure reliable results.
8	Debriefing, Support, and Role of Youth Researchers and Conclusion (10 minutes)	<ul style="list-style-type: none"> Schedule regular debriefing sessions for the youth researchers to discuss their experiences, share challenges, and seek support. Encourage peer support and collaboration among the researchers. Remind the youth researchers of their essential role as ambassadors of the study and the impact of their work on research outcomes and participant well-being. Provide final instructions and reminders for the data collection process. Conclude the training and express appreciation for their participation.
