

Supplementary Material

Cognitive impairment at older ages among 8000 men and women living in Mexico City: cross-sectional analyses of a prospective study

Supplementary Tables

1. Analysis inclusion criteria 2
2. Age- and sex-specific mean MMSE scores and prevalences of cognitive impairment in 7,628 participants aged 50 to 89 years at resurvey who reported having had at least some level of formal education, **by district** 3
3. Age- and sex-specific mean MMSE score and prevalence of cognitive impairment in 8,634 participants aged 50 to 89 years at resurvey **including those who reported having no formal education** 4

Supplementary Figures

1. Prevalence of cognitive impairment and mean MMSE score in 8,634 aged 50 to 89 years at resurvey **including those who reported having no formal education** 5
2. Sex-specific distribution of MMSE scores in 7,628 participants aged 50 to 89 years at resurvey who reported having had at least some level of formal education 6

Supplementary Table 1. Analysis inclusion criteria

	Number of participants
Number of participants who took part in the resurvey	10,144
Aged <50 or ≥90 years	388
MMSE assessment	
• Missing MMSE score	218
• Questionnaire duration <1 or >30 min	370
Missing data on education	126
Remaining participants (sensitivity analysis)	9,288
Less those who reported having no formal education	1,091
Remaining participants (main analysis)	8,197

Supplementary Table 2. Age- and sex-specific mean MMSE scores and prevalences of cognitive impairment in 8,197 participants aged 50 to 89 years at resurvey who reported having had at least some level of formal education, by district

Coyoacán

All	1148	26.2 (3.2)	23	2801	25.8 (3.5)	28	3949	26 (3.3)	26

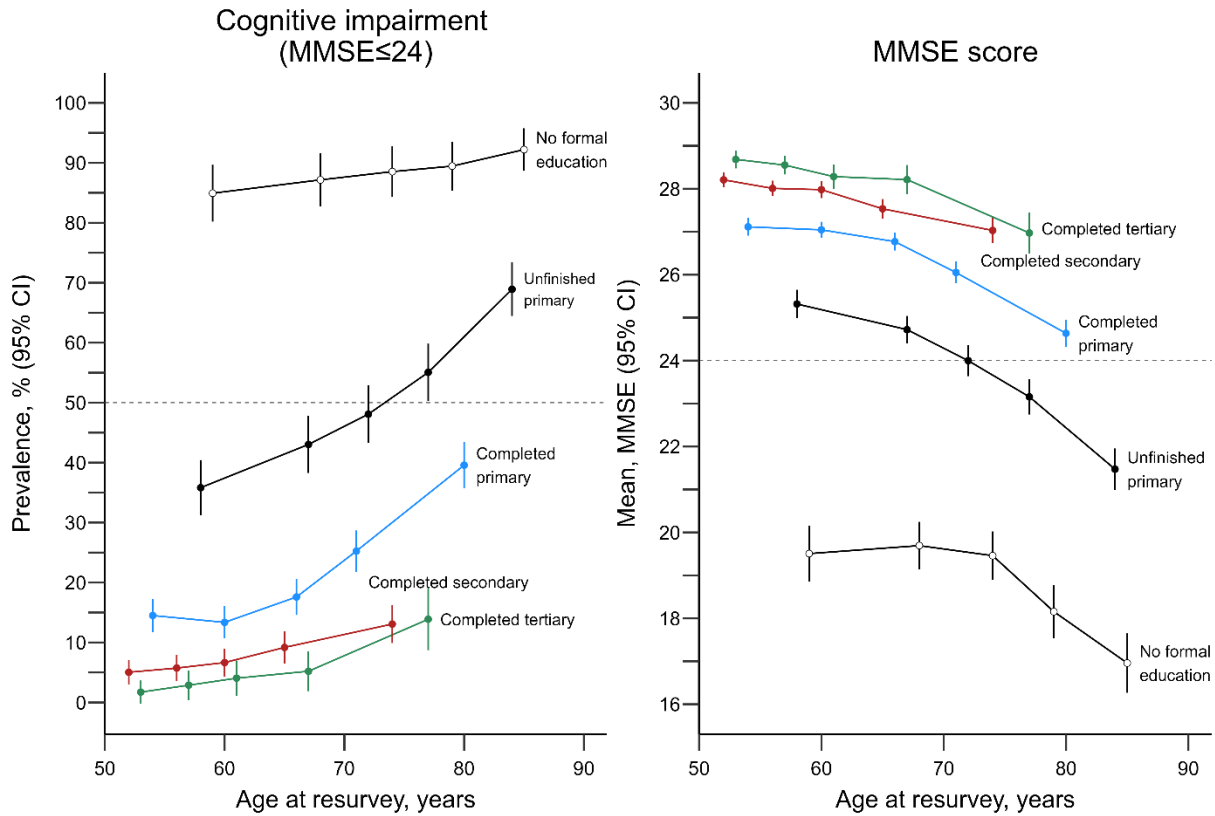

MMSE, Mini-Mental State Examination. Cognitive impairment defined as MMSE \leq 24. Overall prevalences are the simple averages of the age and sex-specific estimates (i.e., are uniformly standardised).

Supplementary Table 3. Age- and sex-specific mean MMSE score and prevalence of cognitive impairment in 9,288 participants aged 50 to 89 years at resurvey including those who reported having no formal education

Age group	Men			Women			Overall		
	<i>n</i>	MMSE mean (SD)	Prevalence %	<i>n</i>	MMSE mean (SD)	Prevalence %	N	MMSE mean (SD)	Prevalence %
50-59	710	27.4 (2.8)	10	1913	27.2 (3.1)	15	2623	27.3 (2.9)	13
60-69	846	26.6 (3.5)	19	2205	26 (3.7)	26	3051	26.3 (3.6)	22

80-89	426	22.5 (4.8)	58	753	20.9 (5.7)	68	1179	21.7 (5.3)	63
All	2788	25.4 (3.8)	31	6500	24.5 (4.3)	39	9288	24.9 (4.1)	35

MMSE, Mini-Mental State Examination. Cognitive impairment defined as MMSE \leq 24. Overall prevalences are the simple averages of the age and sex-specific estimates (i.e., are uniformly standardised).

Supplementary Figure 1. Prevalence of cognitive impairment and mean MMSE score in 9,288 aged 50 to 89 years at resurvey including those who reported having no formal education

MMSE, Mini-Mental State Examination; CI, confidence interval. Unadjusted prevalences and means with 95% CIs are shown. Each point involves ~210 participants with no formal education, ~410 with unfinished primary, ~610 with completed primary, ~430 with completed secondary, and ~170 with completed tertiary education.

Supplementary Figure 2. Sex-specific distribution of MMSE scores in 8,197 participants aged 50 to 89 years at resurvey who reported having had at least some level of formal education

MMSE, Mini-Mental State Examination. Exclusion criteria listed in Supplementary Table 1.
