

**Supplement Figure S1:** Individual Beck Depression Inventory-II (BDI-II), Beck Anxiety Inventory (BAI) and Perceived Stress Scale (PSS-10) scores, in iHUD and HC in panels A-C, respectively; with line indicating median. Data were analyzed with Mann-Whitney U tests, as shown in Table 1. Note the frequent “0” (i.e., floor) scores especially in healthy controls, for BDI-II and BAI scales. iHUD “n” differs due to missing data.

**Table S1. Data for the 29 targets with significant differences in iHUD versus HC after False Discovery Rate (FDR) correction. Targets in bold italics indicate the 19 cytokines from canonical families that are used in PCA analysis**

Target	Family	Used in PCA?	iHUD (n=21)			HC (n=24)			iHUD vs HC comparison		
			Mean NPX units, log2 scale	95%CI	Outliers Replaced	Mean NPX units, log2 scale	95%CI	Outliers Replaced	W statistic	Uncorrected p value	FDR p value
