\* WT values were recorded on the same day for every variant, and the mean for each parameter is given

Mean values for variant receptors are given with 95% confidence intervals determined from the log EC50 or IC50 values, or with SEM. All data are from 8-23 oocytes, 4-15 HEK cells, or 2-10 independent surface expression

tstm indicates the response was too small to measure, n.a. indicates data is not available

a Part of the data set were reanalyzed from data in Ogden et al. 2017

b Part of the data set were reanalyzed from data in Swanger et al. 2016

c Part of the data set were reanalyzed from data in Yuan et al. 2014

d Part of the data set were reanalyzed from data in Chen et al. 2017

e Part of the data set were reanalyzed from data in Brock et al. 2023
