**Table S1.** CONSORT Checklist

Item	Description	Reported in Section
<b>Title and Abstract</b>		
1a	Identification as a randomized trial in the title; Identification as a cluster randomized trial in the title	Title
1b	Structured summary of trial design, methods, results, and conclusions	Abstract
<b>Introduction</b>		
Background and Objectives		
2a	Scientific background and explanation of rationale; Rationale for using a cluster design	Introduction (paragraph 1)
2b	Specific objectives or hypotheses; Whether objectives pertain to the cluster level, the individual participant level, or both	Introduction (paragraph 2)
<b>Methods</b>		
Trial Design		
3a	Description of trial design (such as parallel, factorial) including allocation ratio; Definition of cluster and description of how the design features apply to the clusters	Methods: Study design, Data collection (paragraph 1)
3b	Important changes to methods after trial commencement (such as eligibility criteria), with reasons	N/A
Participants		
4a	Eligibility criteria for participants; Eligibility criteria for clusters	Methods: Study design
4b	Settings and locations where the data were collected	Methods: Study design
Interventions		
5	The interventions for each group with sufficient details to allow replication, including how and when they were actually administered; Whether interventions pertain to the cluster level, the individual participant level, or both	Methods: Study design, Interventions (paragraph 1)
Outcomes		
6a	Completely defined pre-specified primary and secondary outcome measures, including how and when they were assessed; Whether outcome measures pertain to the cluster level, the individual participant level, or both	Methods: Data collection (paragraph 2), Statistical parameters and estimation strategy (paragraph 1)
6b	Any changes to trial outcomes after the trial commenced, with reasons	N/A
Sample Size		
7a	How sample size was determined; Method of calculation, number of cluster(s) (and whether equal or unequal cluster sizes are assumed), cluster size, a coefficient of intraclass correlation (ICC or k), and an indication of its uncertainty	Methods: Minimum detectable effect size
7b	When applicable, explanation of any interim analyses and stopping guidelines	N/A
<b>Randomization</b>		
Sequence Generation		
8a	Method used to generate the random allocation sequence	Methods: Study design
8b	Type of randomization; details of any restriction (such as blocking and block size); Details of stratification or matching if used	Methods: Study design
Allocation Concealment Mechanism		
9	Mechanism used to implement the random allocation sequence (such as sequentially numbered containers), describing any steps taken to conceal the sequence until interventions were assigned; Specification that allocation was based on clusters rather than individuals and whether allocation concealment (if any) was at the cluster level, the individual participant level, or both	Methods: Study design
Implementation		
10a	Who generated the random allocation sequence, who enrolled clusters, and who assigned clusters to interventions	Methods: Study design
10b	Mechanism by which individual participants were included in clusters for the purposes of the trial (such as complete enumeration, random sampling)	Methods: Study design
10c	From whom consent was sought (representatives of the cluster, or individual cluster members, or both) and whether consent was sought before or after randomization	Methods: Ethics
Blinding		
11a	If done, who was blinded after assignment to interventions (for example, participants, care providers, those assessing outcomes) and how	Methods: Data collection (paragraph 2)
11b	If relevant, description of the similarity of interventions	N/A

<b>Item</b>	<b>Description</b>	<b>Reported in Section</b>
<b>Statistical Methods</b>		
12a	Statistical methods used to compare groups for primary and secondary outcomes; How clustering was taken into account	Methods: Statistical parameters and estimation strategy (paragraph 2)
12b	Methods for additional analyses, such as subgroup analyses and adjusted analyses	Methods: Statistical parameters and estimation strategy (paragraph 2), Subgroup analyses, Sensitivity analyses
<b>Results</b>		
<b>Participant Flow</b>		
13a	For each group, the numbers of participants/clusters who were randomly assigned, received intended treatment, and were analyzed for the primary outcome	Results: Enrollment, Fig S1, Fig S2
13b	For each group, losses and exclusions after randomization, together with reasons, for both clusters and individual cluster members	Results: Enrollment, Fig S1, Fig S2
<b>Recruitment</b>		
14a	Dates defining the periods of recruitment and follow-up	Results: Enrollment
14b	Why the trial ended or was stopped	N/A
<b>Baseline Data</b>		
15	A table showing baseline demographic and clinical characteristics for each group; Baseline characteristics for the individual and cluster levels as applicable for each group	Tables S2, S3
<b>Numbers Analyzed</b>		
16	For each group, number of participants/clusters (denominator) included in each analysis and whether the analysis was by the original assigned groups	Statistical parameters and estimation strategy (paragraph 2), Tables S6, S7
<b>Outcomes and Estimation</b>		
17a	For each primary and secondary outcome, results for each group, and the estimated effect size and its precision (such as 95% confidence interval); Results at the individual and cluster levels as applicable and a coefficient of intracluster correlation (ICC or k) for each primary outcome	Results: Intervention effects on antibiotic use, Fig 1, Fig2, Tables S8-S11
17b	For binary outcome, presentation of both absolute and relative effect sizes is recommended	Results: Intervention effects on antibiotic use, Tables S8-S11
<b>Ancillary Analyses</b>		
18	Results of any other analyses performed, including subgroup analyses and adjusted analyses, distinguishing pre-specified from exploratory	Results: Subgroup analyses, Secondary and sensitivity analyses, Fig 3, Fig 4, Tables S12-S16
<b>Harms</b>		
19	All important harms or unintended effects in each group	N/A
<b>Discussion</b>		
<b>Limitations</b>		
20	Trial limitations, addressing sources of potential bias, imprecision and, if relevant, multiplicity of analyses	Discussion
<b>Generalizability</b>		
21	Generalizability (external validity, applicability) of the trial findings; Generalizability to clusters and/or individual participants (as relevant)	Discussion
<b>Interpretation</b>		
22	Interpretation consistent with results, balancing benefits and harms, and considering other relevant evidence	Discussion
<b>Other Information</b>		
<b>Registration</b>		
23	Registration number and name of trial registry	Methods: Study design
<b>Protocol</b>		
24	Where the full trial protocol can be accessed, if available	N/A
<b>Funding</b>		
25	Sources of funding and other support (such as supply of drugs), role of funders	Funding

**Table S2.** Enrollment characteristics by intervention group within the EED substudy and the WASH Benefits parent trial in Bangladesh

	EED substudy				WASH Benefits parent trial			
	C	WSH	N	N+WSH	C	WSH	N	N+WSH
Number of compounds	454	429	450	450	1382	698	699	686
<b>Socio-demographics</b>								
Mother's age in years, mean (SD)	23 (5)	24 (5)	24 (5)	24 (5)	24 (5)	24 (5)	24 (5)	24 (6)
Mother's years of education, mean (SD)	7 (3)	6 (3)	6 (4)	6 (3)	6 (3)	6 (3)	6 (3)	6 (3)
Father's years of education, mean (SD)	5 (4)	5 (4)	5 (4)	5 (4)	5 (4)	5 (4)	5 (4)	5 (4)
Father works in agriculture, % (n)	23% (104)	29% (128)	34% (148)	28% (127)	30% (414)	31% (216)	33% (232)	30% (207)
Number of people in household, mean (SD)	5 (2)	5 (2)	5 (2)	5 (2)	5 (2)	5 (2)	5 (2)	5 (2)
Has electricity, % (n)	60% (269)	62% (278)	62% (269)	61% (272)	57% (784)	61% (426)	59% (409)	60% (412)

PR: Prevalence ratio (for binary outcomes), CR: Count ratio (for count outcomes); CI: Confidence interval; C: Control; WSH: Water, sanitation, hygiene; N: Nutrition, N+WSH: Nutrition+ water, sanitation, hygiene.

Bolded values refer to estimates with a p-value  $\leq 0.05$ .

<sup>a</sup> p-value for interaction term between study arm and subgroup variable.

\* Interaction p-values  $<0.20$  indicate significant effect modification.

**Table S15.** Additive interaction by age and sex for unadjusted intervention effects on antibiotic use within last 3 months, Kenya
