## SUPPLEMENTARY FIGURES

**Supplementary Figure 1. Age at onset and age at death distribution.** Violin plots showing age at onset (A) and age at death (B) are represented as well as box plots for each patient/control groups.

**Supplementary Figure 2. Gene prioritization results for FTLD-TDP All.** A visual summary of weighted evidence category scores for the prioritized genes within genome-wide significant and subthreshold loci for FTLD-TDP All GWAS. The leftmost squares indicate the locus index numbers which contain additional “\_S” patterns for the subthreshold loci, meanwhile others indicate the genome-wide significant loci. The types of evidence for each category are colored according to the six different domains to which they belonged. Weighted scores for each evidence category are rescaled to a 0–100 scale based on the maximum score a candidate gene can obtain from a category (see **Supplementary Table 2**). The darker colors represent higher scores in categories, while tier 1 prioritized genes are displayed in dark green and tier 2 prioritized genes are displayed in light green. Only tier 1 and tier 2 genes are shown for each locus, and all candidate genes considered and scored can be found in **Supplementary Table 3**. MAFs (based on gnomAD v4 non-Finnish European samples) and CADD (v1.7) PHRED scores for rare and/or protein-altering rare variants are labeled in white within the respective squares. eQTL, expression QTL; sQTL, splicing QTL; mQTL, methylation QTL; pQTL, protein-expression QTL; haQTL, histone acetylation QTL; coloc, colocalization; eTWAS, expression transcriptome-wide association study; sTWAS, splicing transcriptome-wide association study; PWAS, proteome-wide association study; Mon. Mac., monocytes and macrophages; LCL, lymphoblastoid cell line; QTLCat, The eQTL Catalogue.

Domain or Type: eQTL-GWAS Integration (blue), sQTL-GWAS Integration (orange), pQTL-GWAS Integration (green), mQTL-GWAS Integration (purple), haQTL-GWAS Integration (teal), Prioritized Gene Tier (dark green)

Per Category Rescaled Score: 0 25 50 75 100

**Supplementary Figure 3. Gene prioritization results for FTL D-TDP A.** A visual summary of weighted evidence category scores for the prioritized genes within genome-wide significant and subthreshold loci for FTL D-TDP A GWAS. The leftmost squares indicate the locus index numbers which contain additional “\_S” patterns for the subthreshold loci, meanwhile others indicate the genome-wide significant loci. The types of evidence for each category are colored according to the six different domains to which they belonged. Weighted scores for each evidence category are rescaled to a 0–100 scale based on the maximum score a candidate gene can obtain from a category (see **Supplementary Table 2**). The darker colors represent higher scores in categories, while tier 1 prioritized genes are displayed in dark green and tier 2 prioritized genes are displayed in light green. Only tier 1 and tier 2 genes are shown for each locus, and all candidate genes considered and scored can be found in **Supplementary Table 3**. MAFs (based on gnomAD v4 non-Finnish European samples) and CADD (v1.7) PHRED scores for rare and/or protein-altering rare variants are labeled in white within the respective squares. eQTL, expression QTL; sQTL, splicing QTL; mQTL, methylation QTL; pQTL, protein-expression QTL; haQTL, histone acetylation QTL; coloc, colocalization; eTWAS, expression transcriptome-wide association study; sTWAS, splicing transcriptome-wide association study; PWAS, proteome-wide association study; Mon. Mac., monocytes and macrophages; LCL, lymphoblastoid cell line; QTLCat, The eQTL Catalogue.

**Supplementary Figure 4. Gene prioritization results for FTL D-TDP B.** A visual summary of weighted evidence category scores for the prioritized genes within genome-wide significant and subthreshold loci for FTL D-TDP B GWAS. The leftmost squares indicate the locus index numbers which contain additional “\_S” patterns for the subthreshold loci, meanwhile others indicate the genome-wide significant loci. The types of evidence for each category are colored according to the six different domains to which they belonged. Weighted scores for each evidence category are rescaled to a 0–100 scale based on the maximum score a candidate gene can obtain from a category (see **Supplementary Table 2**). The darker colors represent higher scores in categories, while tier 1 prioritized genes are displayed in dark green and tier 2 prioritized genes are displayed in light green. Only tier 1 and tier 2 genes are shown for each locus, and all candidate genes considered and scored can be found in **Supplementary Table 3**. MAFs (based on gnomAD v4 non-Finnish European samples) and CADD (v1.7) PHRED scores for rare and/or protein-altering rare variants are labeled in white within the respective squares. eQTL, expression QTL; sQTL, splicing QTL; mQTL, methylation QTL; pQTL, protein-expression QTL; haQTL, histone acetylation QTL; coloc, colocalization; eTWAS, expression transcriptome-wide association study; sTWAS, splicing transcriptome-wide association study; PWAS, proteome-wide association study; Mon. Mac., monocytes and macrophages; LCL, lymphoblastoid cell line; QTLCat, The eQTL Catalogue.

**Supplementary Figure 5. Gene prioritization results for FTL D-TDP C.** A visual summary of weighted evidence category scores for the prioritized genes within genome-wide significant and subthreshold loci for FTL D-TDP C GWAS. The leftmost squares indicate the locus index numbers which contain additional “\_S” patterns for the subthreshold loci, meanwhile others indicate the genome-wide significant loci. The types of evidence for each category are colored according to the six different domains to which they belonged. Weighted scores for each evidence category are rescaled to a 0–100 scale based on the maximum score a candidate gene can obtain from a category (see **Supplementary Table 2**). The darker colors represent higher scores in categories, while tier 1 prioritized genes are displayed in dark green and tier 2 prioritized genes are displayed in light green. Only tier 1 and tier 2 genes are shown for each locus, and all candidate genes considered and scored can be found in **Supplementary Table 3**. MAFs (based on gnomAD v4 non-Finnish European samples) and CADD (v1.7) PHRED scores for rare and/or protein-altering rare variants are labeled in white within the respective squares. eQTL, expression QTL; sQTL, splicing QTL; mQTL, methylation QTL; pQTL, protein-expression QTL; haQTL, histone acetylation QTL; coloc, colocalization; eTWAS, expression transcriptome-wide association study; sTWAS, splicing transcriptome-wide association study; PWAS, proteome-wide association study; Mon. Mac., monocytes and macrophages; LCL, lymphoblastoid cell line; QTLCat, The eQTL Catalogue.

**Supplementary Figure 6. *RBPJL* and *L3MBTL1* RNA expression in brain tissue. A**

Weighted gene co-expression network from the ROSMAP dataset and the BrainExp database showing that both genes are part of the same module.

**B** Single nuclei RNA expression of *RBPJL* and *L3MBTL1* genes from the Seattle Alzheimer's Disease Brain cell Atlas from middle temporal gyrus of 84 aged donors. The darkness of the color of each nucleus increases as the expression level becomes higher.
