

S4 Table. The scores of 40 teachers on 9 items of hyperactivity/Impulsivity domain of ADHD-T-Dari: FVI.

Item	Number of teacher votes		I-FVI	Pc	κ	Comprehension
	Unclear	Clear				
Q01	0	40	1	9.09495E-13	1	excellent
Q02	0	40	1	9.09495E-13	1	excellent
Q03	0	40	1	9.09495E-13	1	excellent
Q04	0	40	1	9.09495E-13	1	excellent
Q05	2	38	0.95	2.83762E-09	0.95	excellent
Q06	0	40	1	9.09495E-13	1	excellent
Q07	0	40	1	9.09495E-13	1	excellent
Q08	0	40	1	9.09495E-13	1	excellent
Q09	3	37	0.925	3.23489E-07	0.925	excellent

S-FCVI/Ave = 0.986

Note. The FVI is equal to the sum of expert votes. Average of FVIs / total number of instrument items is the S-FVI. The binomial random variable was used to determine Pc (probability of a chance occurrence): $Pc = \frac{[N! / A! (N-A)!] \times 0.5^N}{2^N}$. "N" stands for "number of experts", while "A" stands for "number of experts on good relevance". $I-FVI-Pc/(1-Pc) = \kappa$ denoting agreement on importance. Kappa is measured using the following criteria: Fair = 0.80; Medium = 0.80 to 0.85; and Excellent = 0.85.
