Next day defined as 16-32h, subsequent day 36-52h. Data presented as AUC (95% CI). Adjusted indicates GFAP AUC adjusted for age and BMI. *i)* denotes AUC analysis for all data. *ii)* denotes analysis with exclusion of study participants that self-reported sustaining a concussion in the 6 months prior to recruitment. *iii)* denotes analysis with the exclusion of the second (and third) participation of an individual. Five control participants and 1 SRC participant had no SCAT symptom data and were not included in associated AUC calculations.

Abbreviations: SRC, sport-related concussion; GFAP, glial fibrillary acidic protein; SCAT, sport concussion assessment tool. AUC, area under curve; 95% CI, 95% confidence interval; BMI, body mass index.
