

Table 1. Number of individuals of each phenotype identified according to each phenotyping method.

Suicidal ideation (SI)-only case counts represent those after excluding suicidal behavior (SB). Controls are screened for the absence of both SB and SI. The prevalence in BioMe (N=45,956) for each group is in parentheses. More details are provided in **Supplementary Figure 1**. ICD = International Classification of Diseases.

Phenotyping Method	N Suicidal Behavior Cases (prevalence)	N Suicidal Ideation-only Cases (prevalence)	N Controls (prevalence)
ICD Code Only	62 (0.13%)	60 (0.13%)	43,996 (95.73%)
Note Only	950 (2.07%)	801 (1.74%)	
Both ICD Code and Note	54 (0.12%)	33 (0.07%)	
Unique Total	1,066 (2.32%)	894 (1.95%)
