Small-system

Medium-system

Large-system

Chronosystem

discretionary.

Occupational engagement that meets the basic needs of health maintenance, self-care, and safety.

The physiological and psychological composition of a person.

Immediate living environment

Organizations to which the individual belongs.

Physical and social environments at a macro level.

Cosmic time and the experience of time as shaped by engagement in occupations.

Sleep, rest, exercising, eating, drinking

Cognition, physical body, spirituality

Home, family, friends

Schools, communities, worksites

Geographic terrain, climate, social norms

Hours, minutes, seconds, future, present, past

The two-sided, five-dimensional, and multi-level characteristics can be used to portray each occupational engagement and are not mutually exclusive. The characteristics are mainly determined by people's motivation of and subjective feelings about their engagement (i.e., characteristics of human consciousness that drive occupational engagement).
