

1

2 **Figure S3.** Correlations between measured and estimated VF parameters. (A) 24-2 VF threshold
 3 (pointwise values, Pearson's $r = 0.893$), (B) 10-2 VF threshold (pointwise values, Pearson's $r = 0.902$),
 4 (C) 24-2 MD (Pearson's $r = 0.932$), and (D) 10-2 MD (Pearson's $r = 0.945$). Each panel displays
 5 boxplots of estimated values for each measured value increment and a regression line. All correlations
 6 are significant at $p < 0.001$.
 7 VF = visual field; MD = mean deviation.
