

Figure S1

Figure S1 - Boxplots of control miRNA used to normalise data across experiments. The values are processed sequencing reads, as described in the Methods section..

eTable 1 – Summary of statistical analysis of all variables in the full dataset. Tests between groups were conducted by t-test or non-parametric Kruskal-Wallis test for continuous variables. Data are presented as mean (standard deviation, STD) or median (interquartile range) for continuous variables. Significant values are given in red.

Type	Variable	Time	Normal distribution	AKI	non-AKI	p.value

eTable3

eTable 3 – Summary of statistical analysis of all variables in patients receiving aspirin only. Tests between groups were conducted by t-test or non-parametric Kruskal-Wallis test for continuous variables. Data are presented as mean (standard deviation, STD) or median (interquartile range) for continuous variables. Significant values are given in red.
