

Table 1. Protocols of microbiology assays performed at the One Health Colombia, 2024.

Assay	Pathogen	Protocol
Oropouche real-time RT-qPCR	OROV	Ciuderis, et al. <i>Emerg. Microb & Infec.</i> 2022 11:1, 2645-2657
ZCD Triplex real-time RT-qPCR	ZIKV, CHIKV, DENV	Waggoner, et al. <i>Emerg Infec Dis.</i> 2016 22(7):1295-1297
Mayaro real-time RT-qPCR	MAYV	Gomes Naveca, et al. <i>Mem Inst Oswaldo Cruz</i> . 2017 Jul;112(7):510-513
DENV non-structural protein 1	DENV	Abbott RDT
Anti-DENV IgM	DENV	Abbott RDT
Anti -DENV IgG	DENV	Abbott RDT
Hepatitis B virus surface Ag	Hepatitis B virus	Abbott Architect
Anti-hepatitis C virus antibody	Hepatitis C virus	Abbott Architect
Malaria qPCR	<i>Plasmodium</i> spp.	Kamau, et al. <i>PLoS One.</i> 2013 29;8(8):e71539
Malaria antigen	<i>P. vivax</i>	Abbott RDT
Leptospira qPCR	<i>Leptospira</i> spp.	Waggoner et al. <i>J Clin Microbiol.</i> 2014 Jun;52(6):2011-8

OROV, Oropouche virus; ZIKV, Zika virus; CHIKV, Chikungunya virus; MAYV, Mayaro virus; RDT, rapid diagnostic test.

Table 2. Clinical manifestations of the OROV cases in Leticia municipality, Colombia, 2024.

	OROV _{PE-CO-EC/2008-2021} N=6 (No.)	OROV _{BR-2015-2023} N=2 (No.)
Fever	1	1
Headache	6	2
Myalgia	5	2
Arthralgia	6	1
Chills	3	0
Fatigue	5	2
Rash	1	0
Diarrhea	3	1

OROV, Oropouche virus.

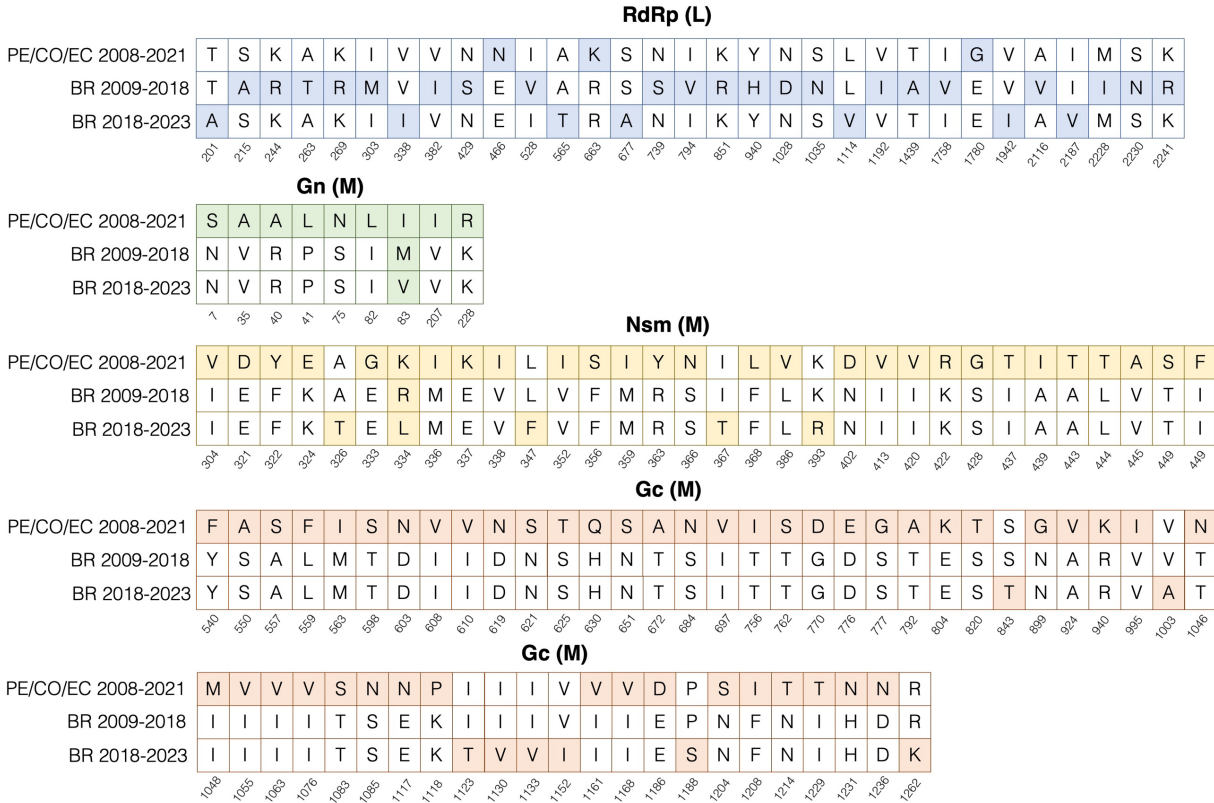

Figure 1. Amino acid substitutions in OROV lineages. Amino acid changes found in the virus proteins across three major clades of OROV, PE/CO/EC 2008-2021, BR 2009-2018, and the novel BR 2018-2023 lineage, are shown. A total of 31 changes were observed in the RdRp (L), 9 in Gn (M), 32 in Nsm (M), and 55 in Gc (M). No amino acid changes were found in the S segment. The representative strains for each lineage were determined by calculating the consensus sequence from the respective group of sequences within each lineage.
