

Requirements of Explainable Artificial Intelligence for Clinical Decision Support System

Types		Questions	Required Explanations
Data	Types of data	What types of personal data are used?	The decision D was made on the basis of data of type X, Y, Z about you.
	Data sources	Where do your data come from?	The decision D was based on data from sources X, Y, Z.
Bias	Training data	On which data was the AI trained?	The decision D was made by a system trained on existing data of type X, Y, Z.
	Tagging groups	Who tagged training data?	The decision D was made by a system trained on data tagged by X, Y, Z.
	Tested for bias	Was training data or AI system tested for bias?	The decision D was made by a system tested for bias of type X, Y, Z.
Diagnostic Performance	Performance	What is the performance of the AI system?	The decision D was made by a system with a performance of X, Y, Z.
	Performance testing	How was the performance determined?	The decision D was made by a system with a performance determined by tests X,Y, Z.
	Essential indicators	What are key variables of AI decision-making?	The key input data resulting in decision D was X, Y, Z.
	Alternatives	Are alternatives considered?	The alternatives to decision D are X, Y, Z with a probability of x, y, z (< d).
Decision	Longevity	When is decision reconsidered?	The decision D will be reconsidered if conditions X, Y, Z obtain.
	AI involvement	To what degree is AI making the decision?	The decision D involved an AI system with respect to X, Y, Z.
	Human involvement	To what degree are humans making the decision?	The decision D was wholly/partly made by health professionals X, Y, Z.
	Responsibility	Who is responsible for the decision?	The objective/legal responsibility for decision D is held by X, Y, Z.
	Evidence *2)	What is the evidence on which decision D was based?	The decision D was based on instances X, Y, Z of the training data.
