

SUPPLEMENTARY MATERIAL

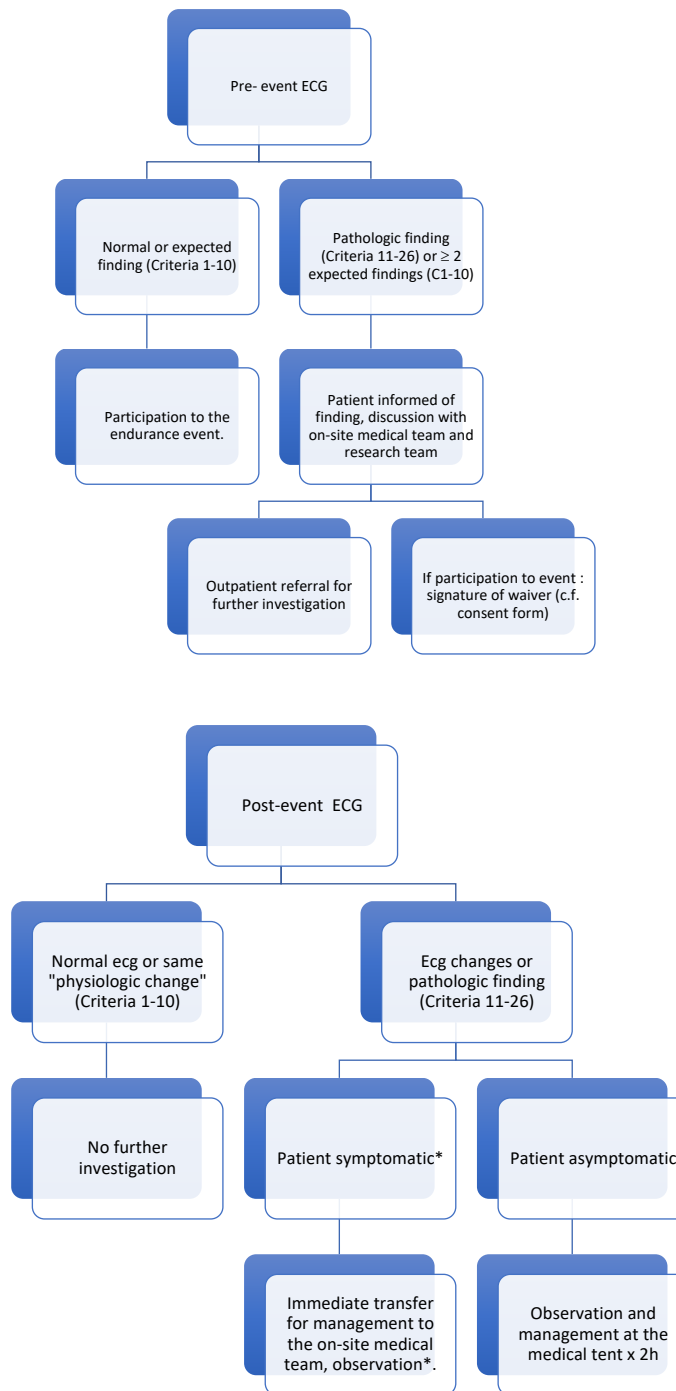

Supplementary Material 1 – Demographic questionnaire.....	2
Supplementary material 2 – Management of ECG abnormalities pre-event and post-event	3
Supplementary Material 3 - Details of concerning ECG findings identified on site.	4

Supplementary Material 1 – Demographic questionnaire

An electronic version (excel) of the questionnaire was filled by a volunteer with the participant on site.

Bib number	
Are you Canadian?	Yes No
Date of birth (yyyy-mm-dd)	
Gender	Male Female
Are you or were you pregnant in the last 12 weeks?	Yes No
Are you known for any of (check any that apply)?	Hypertension Diabetes Cholesterol Angina Myocardial infarction Coronary bypass / stents Arrhythmia Pacemaker/defibrillator Stroke
Has anyone in your family, before the age of 60, been diagnosed with (check any that apply):	Myocardial infarction Stroke Sudden cardiac death
List your regular medication (prescription, over the counter, natural products, nutritional supplements...):	
Number of hours dedicated to training per week	<5 5-15 >15
Number of years you have been training for endurance events (>4h)	<1 1-4 5-10 >10
When was the last time you trained (more than 20 minutes of moderate to intense aerobic activity)?	<2h ago In the last 12h In the last 24h >24h ago
Have you ever participated in an endurance athletic event lasting more than 4h?	Yes No
Have you ever felt chest pain during exercise?	Yes (indicate frequency): No
Have you ever lost consciousness during exercise?	Yes (indicate frequency): No
Added by study team post-event	
Race time (hh:mm) or DNF	
Visit to medical tent	Yes (reason for consultation) No

Supplementary material 2 – Management of ECG abnormalities pre-event and post-event

* at any point, a symptomatic patient will be considered for immediate treatment and/or transfer by the on-site medical team.

Supplementary Material 3 – Details concerning ECG findings identified on site.

Abnormal finding	Investigation
PRE	
Q wave pre-race, resolved.	Sent for cardiologist evaluation and ECHO that day. Normal work up
Q wave pre – race, resolved BER post- race de novo.	Follow-up with primary care provider.
LAD pre and post-race.	Normal cardiac work-up with cardiologist post-race
LBBB and IVCD identified pre and post-race. T-wave inversion pre-race, resolved. Long QT post-race, de novo.	Previous negative cardiac work-up with cardiologist including normal echocardiogram. Follow- up with cardiologist organized.
Q wave pre-race, persisted.	Declined further on-site investigation and work –up Follow-up with primary care provider.
LAD pre-race, resolved.	Previous negative cardiac work-up with cardiologist including normal echocardiogram. Follow- up with cardiologist organized.
Incomplete RBBB,, LVH, BER (persistent) and TWI (resolved) pre-race. Long QT post-race, de novo.	Declined further on-site investigation and work –up Follow-up with cardiologist organized.
POST	
LAE post-race, de novo.	Follow-up with primary care provider.
Long QT post-race, de novo.	Had previous normal cardiac work-up by primary care provider. Follow-up with cardiologist organized.
