

Table S1. Adjustment of the association (by Spearman's rank correlation) between sperm DNA fragmentation index (%DFI) and age for possible confounding factors

Confounder	ρ (p-value)
None	0.5661428 (1.044×10^{-15})
Abstinence time	0.525739 (2.536657×10^{-12})
Sperm concentration (mill/mL)	0.5649652 (2.304839×10^{-14})
Progressive motility (%)	0.4304968 (2.508537×10^{-8})
Morphology (% normal forms)	0.5368845 (7.093121×10^{-13})
Vitality (% live spermatozoa)	0.4717895 (1.842531×10^{-9})
All of the above	0.4305702 (8.870944×10^{-8})
