Sequential samples (nasal-throat mixed swabs, plasma, urine, and feces) were collected from case 1 to case 11.

Two cases with severe diseases were colored in red.

Case 1, case 2 and case 3 are family cluster, all of them visited Wuhan on Jan.18 and back to Beijing on Jan. 23, 2020. Case 1 firstly appeared syndromes after he arrived at Wuhan. Six days later case 2 and case 3 appeared syndromes in Beijing. So case 2 and case 3 potentially infected after the exposure in Wuhan or infected by case 1 via close contact. Case 12 and case 19 are also family cluster.
