1. Appendix Figures

Appendix Figure 1. Estimates of epidemiological distributions, COVID-19, South Korea. (A) Distribution of incubation period among 181 laboratory-confirmed cases. The line is best fitted by a gamma distribution. (B) Distribution of serial interval among 79 cases in 44 clusters. The line indicates a fitted normal distribution. (C) Distribution of symptom onset to laboratory-confirmation divided by two periods of the epidemic in South Korea. The black line is the estimate during period-1 (before February 23, 2020), and the blue line is the estimate during period-2 (on or after February 24, 2020). Both lines indicate a fitted log-normal distribution.

Appendix Figure 2. Daily number of laboratory-confirmed cases from the collected data and reported data by the Korean Ministry of Health and Welfare outside of Daegu-Gyeongsangbuk provincial region in South Korea. The black line indicates the collected data used in this study, and the gray line indicates the daily number of confirmed cases reported from the central government in South Korea.
