

Supplementary Figure 5. These column charts show the distribution of patients by the duration from the first of the consecutive negative anal swab tests to the first positive retest during strict post-discharge quarantine. A) All COVID-19 patients with recurrence of anal swab PCR positivity. B) The subset of anal swab PCR positive group (N=14) with IgM and IgG antibody tests performed at the time of the first discharge. All patients with anal swab positivity were IgG positive.
