

Supplementary material

Associations with covid-19 hospitalisation amongst 406,793 adults: the UK Biobank prospective cohort study

Supplementary Table S1: Baseline assessment details for variables analysed in the current study.

Supplementary Table S2: Univariable associations with covid-19 hospitalization (n=406,793).

Supplementary Table S3: Results from a multivariable model examining comorbidities together, adjusted for age, sex and ethnicity, for association with hospitalization with covid-19 (n=406,793).

Supplementary Table S4: Results for the parsimonious multivariable regression model presenting associations with covid-19 hospitalization (n=406,793).

Supplementary Table S5: Sensitivity analysis presenting results from a multivariable regression for associations with covid-19 hospitalization (n=406,703).

UK Biobank Medication Codes

Supplementary Table S1: Baseline assessment details for variables analysed in the current study.

Measure	Assessment details
<i>Touch-screen self-administered questionnaire</i>	
Ethnicity	Response options included: White (English/Irish or other white background), Asian or British Asian (Indian/Pakistani/Bangladeshi or other Asian background), Black or Black British (Caribbean, African, or other black background), Chinese, mixed (White and Black Caribbean or African, White and Asian, or other mixed background), or other ethnic group (not defined).
Smoking status	Determined by response to “Do you smoke tobacco now?” and “In the past, how often have you smoked tobacco?”.
Alcohol intake	Determined by response to “About how often do you drink alcohol?” (options: Daily or almost daily; Three or four times a week; Once or twice a week; One to three times a month; Special occasions only; Never).
Townsend deprivation index	Determined according to participant postcode at recruitment and the corresponding output area from the preceding national census. The index was calculated based on the output area’s employment status, home and car ownership, and household condition; the higher and more positive the index, the more deprived an area.
Education level	Determined by response to “Which of the following qualifications do you have? (You can select more than one)” (options: College or University degree; A levels/AS levels or equivalent; O levels/GCSEs or equivalent; CSEs or equivalent; NVQ or HND or HNC or equivalent; Other professional qualifications e.g. nursing, teaching; None of the above). For analyses, qualifications lower than “O level/GCSEs or equivalent” were considered together as “Less than O level”.
<i>Comorbidities (self-report)</i>	
Diabetes	Touchscreen response to “Has a doctor ever told you that you have diabetes?”
Hypertension, ischemic heart disease, stroke	Touchscreen response to "Has a doctor ever told you that you have any of the following conditions?" (options: heart attack; angina; stroke; high blood pressure; none of the above).
Chronic obstructive pulmonary disease, asthma	Touchscreen response to "Has a doctor ever told you that you have any of the following conditions?" (options: blood clot in the leg (DVT); blood clot in the lung; emphysema/chronic bronchitis; asthma; hayfever, allergic rhinitis or eczema; none of the above; prefer not to answer)
All comorbidities	Additionally, history of comorbidity was captured during interview, including for obstructive sleep apnoea which was not captured by touchscreen questions.
<i>Physical measures</i>	
Weight	BV-418 MA body composition analyser (Tanita, Arlington Heights, IL)
Height	Seca 202 height measure (Seca, Birmingham, UK)
Blood pressure	Systolic and diastolic blood pressure were measured after the participant had been at rest for at least 5 minutes in the seated position using the HEM- 70151T digital blood pressure monitor (Omron, Hoofddorp, The Netherlands) with a suitably sized cuff. Measurements were taken twice, separated in time by an interview; the mean of both measurements was used for analysis.

Supplementary Table S2: Univariable associations with covid-19 hospitalization (n=406,793).

	OR (95% CI)	P-value
Age at recruitment (per decade)	1.17 (1.06 to 1.30)	0.002
