

Appendix 2. Plots of simulated and reported $N_D(t)$ and $nCFR(t)$ curves for Australia, Austria, Iceland, Israel, New Zealand, and South Korea.

Similar plots are presented as for Figures 5A and 5B for Germany showing the $nCFR(t)$ versus day curves for different values of the corrected CFR. In all cases a lognormal f_D was used with a median value of 14 days and a logSD of 0.50. The simulated curves calculated using the closed case $nCFR$ on May 7, 2020 as the corrected CFR value are designated by an asterisk.

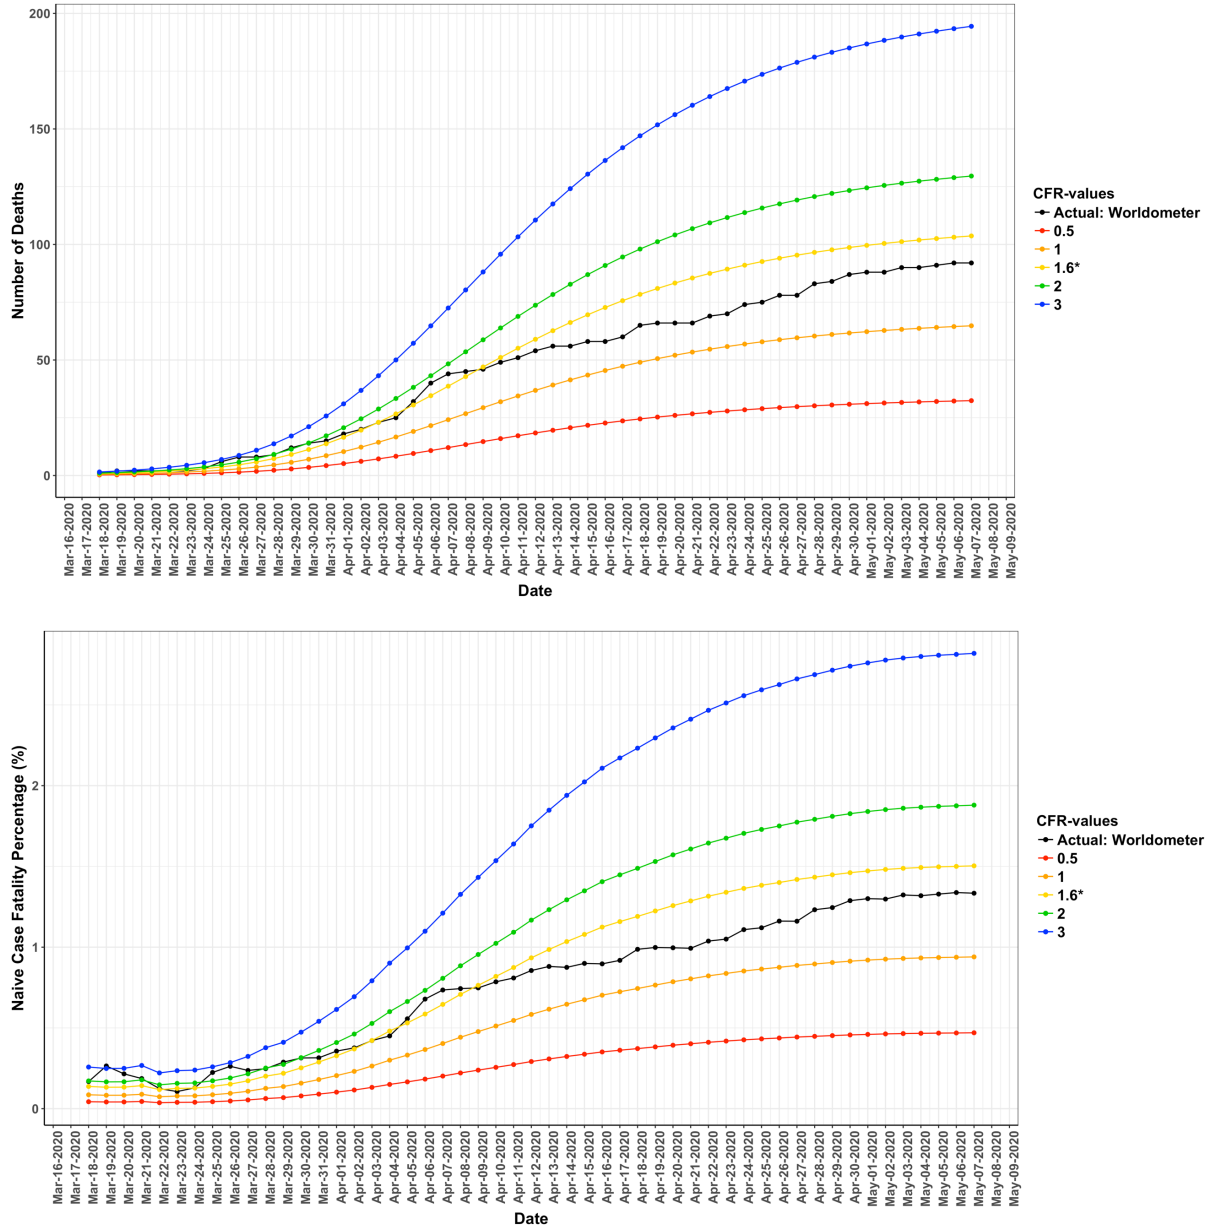

Figure 1. Simulated $nCFR(t)$ and $N_D(t)$ curves for Australia. The simulated curves shown were calculated using a corrected CFR of 0.50, 1.0, 1.7 (the closed case $nCFR$), 2.0, and 3.0. The reported data is shown in black.

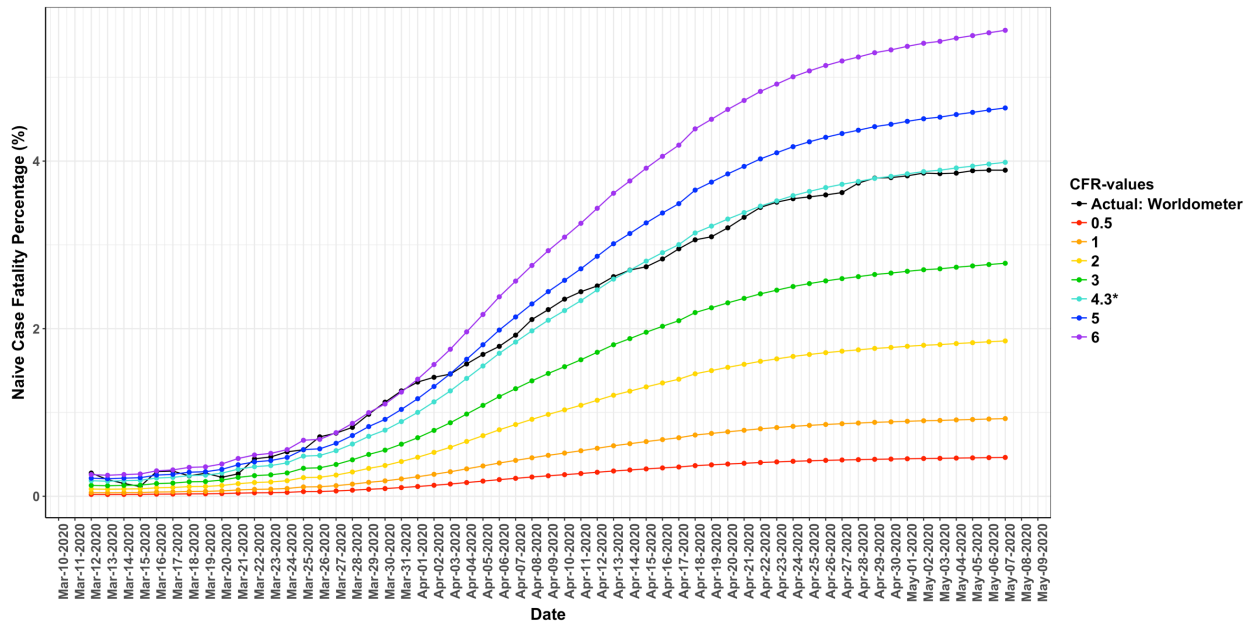

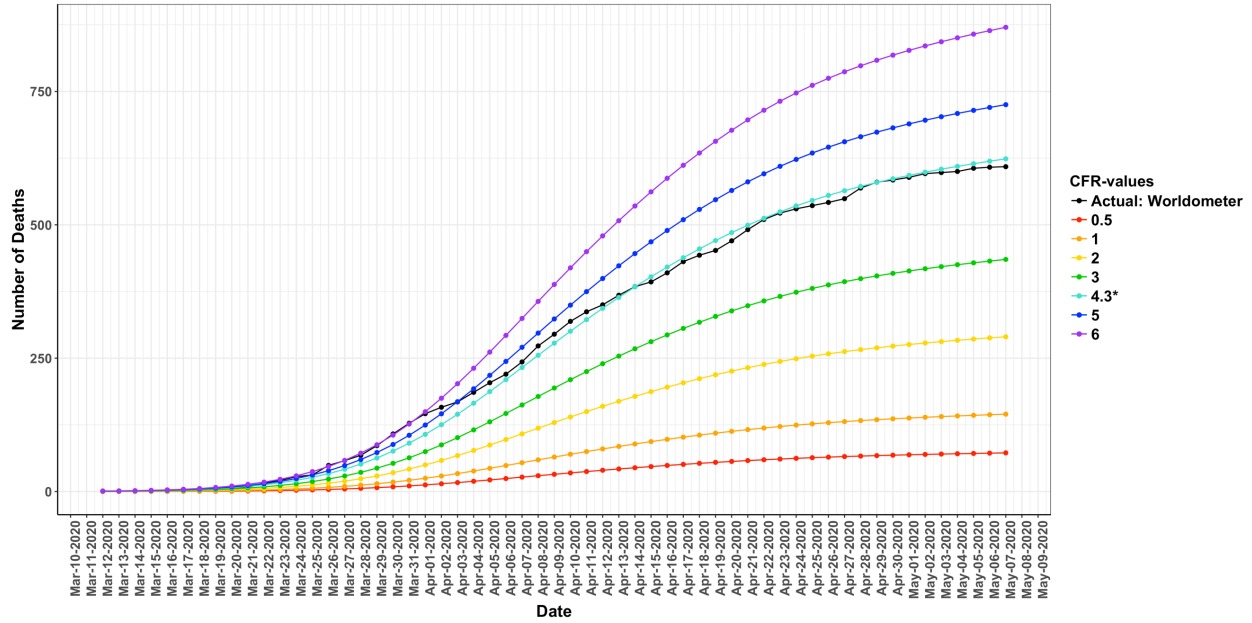

Figure 2. Simulated $nCFR(t)$ and $N_D(t)$ curves for Austria. The simulated curves shown were calculated using a corrected CFR of 0.50, 1.0, 2.0, 3.0, 4.3 (the closed case $nCFR$), 5.0, and 6.0. The reported data is shown in black.

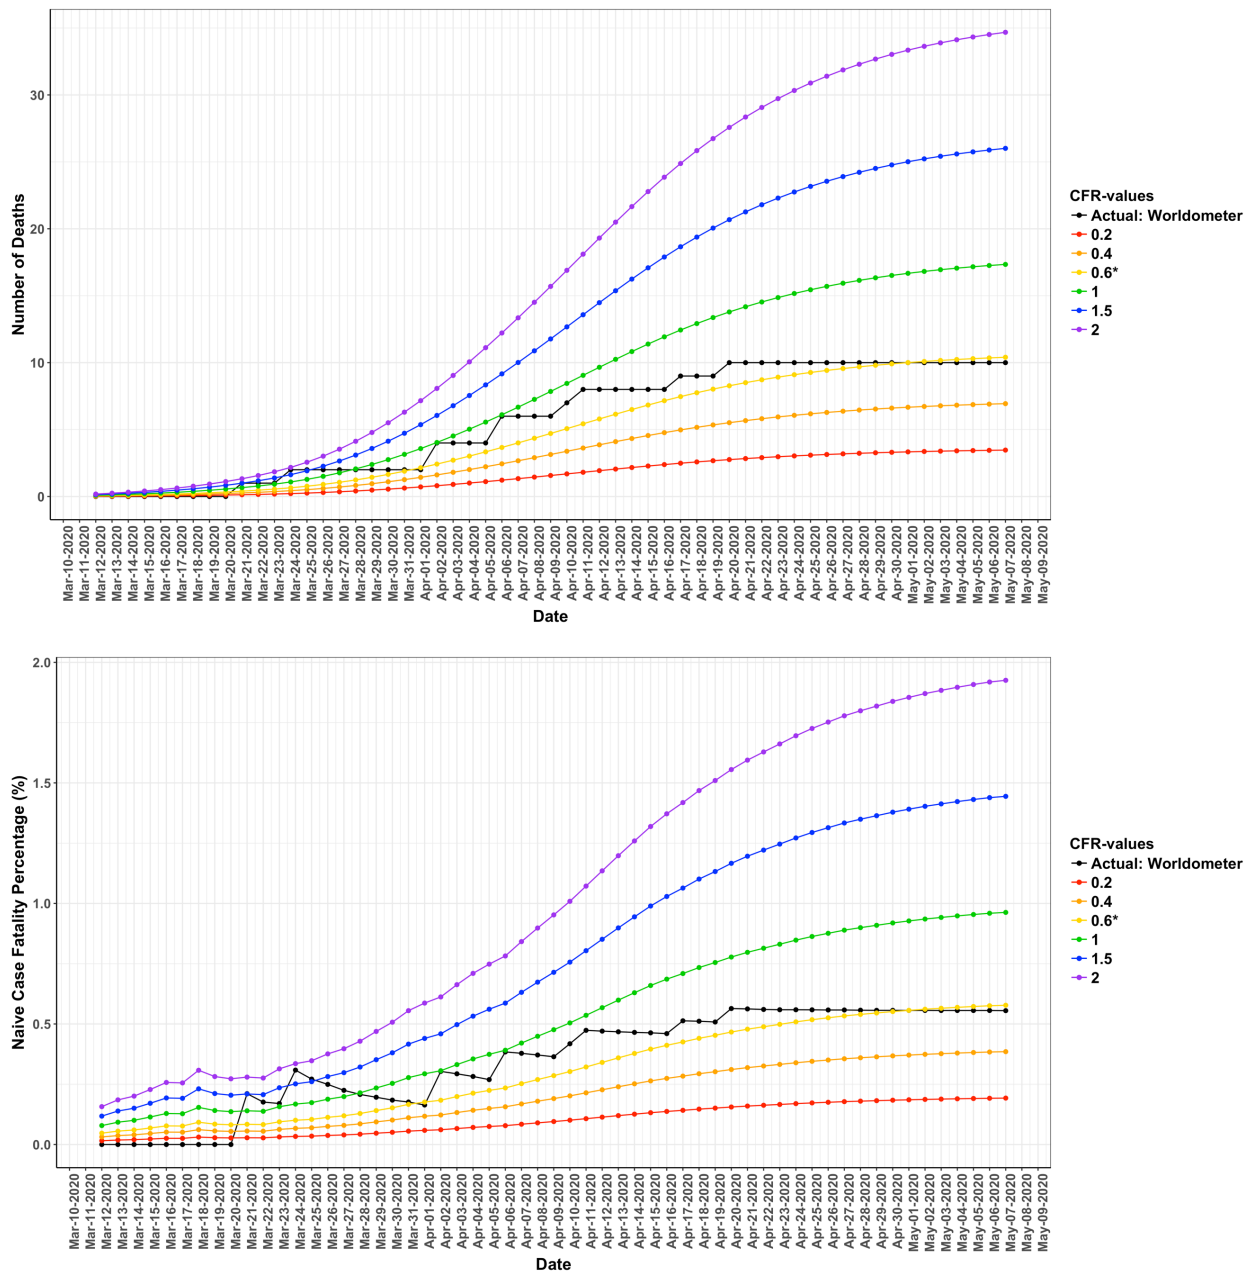

Figure 3. Simulated $nCFR(t)$ and $N_D(t)$ curves for Iceland. The simulated curves shown were calculated using a corrected CFR of 0.20, 0.50, 0.70 (the closed case $nCFR$), 1.0, 1.5, and 2.0. The reported data is shown in black.

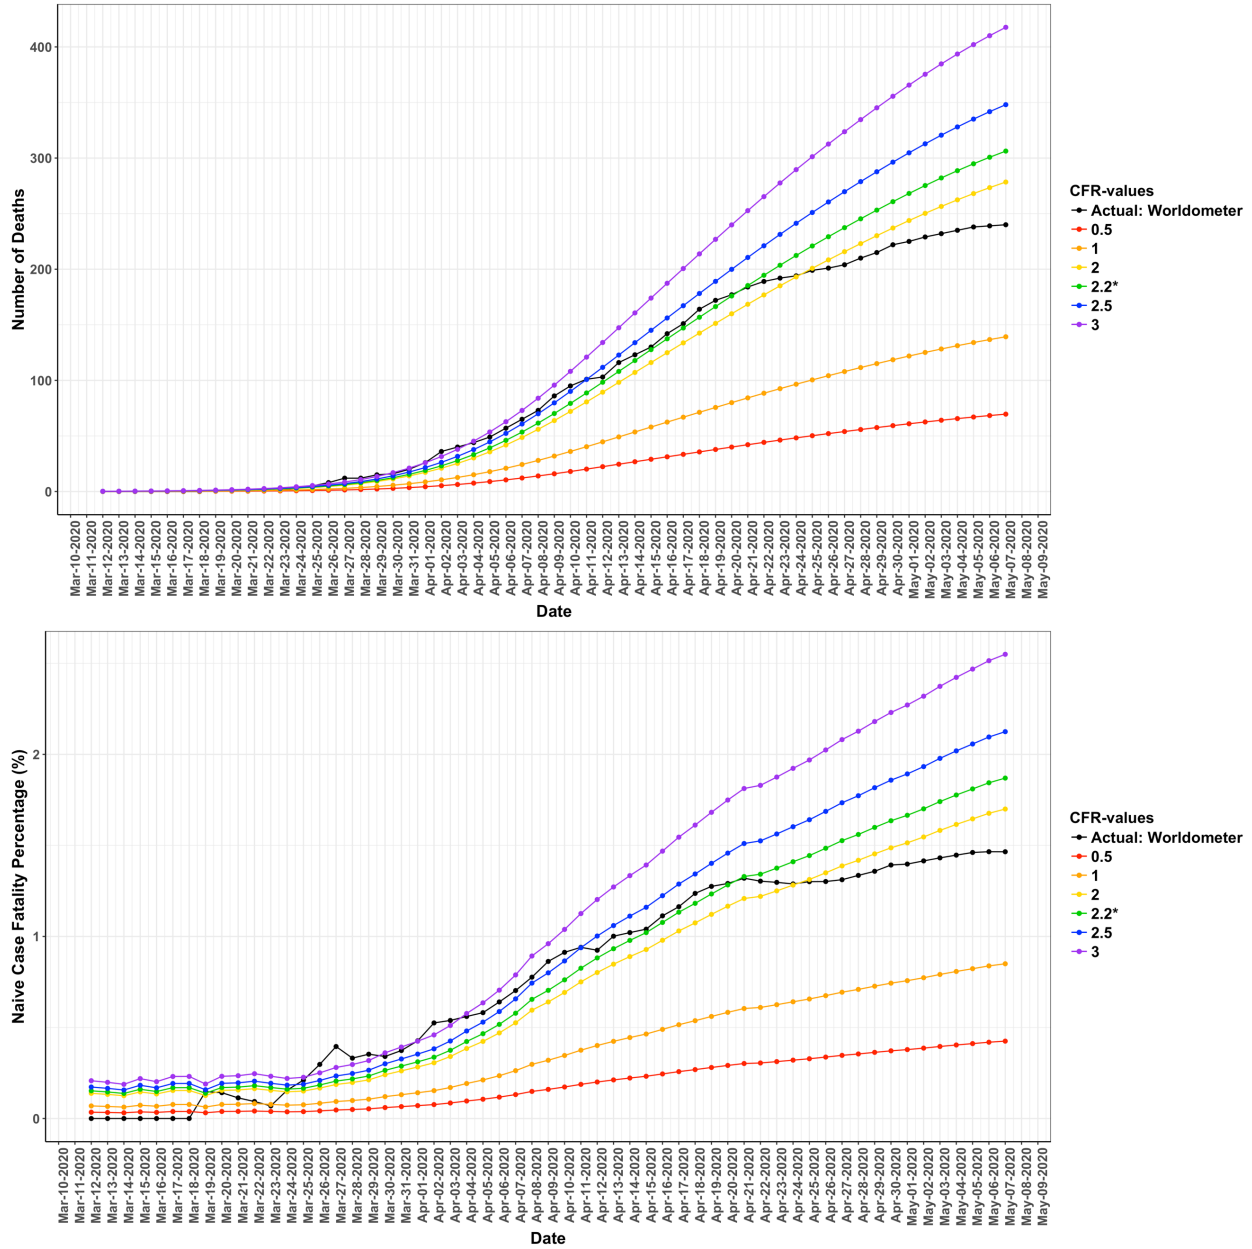

Figure 4. Simulated $nCFR(t)$ and $N_D(t)$ curves for Israel. The simulated curves shown were calculated using a corrected CFR of 0.50, 1.0, 2.0, 2.2 (the closed case $nCFR$), 2.5, and 3.0. The reported data is shown in black.

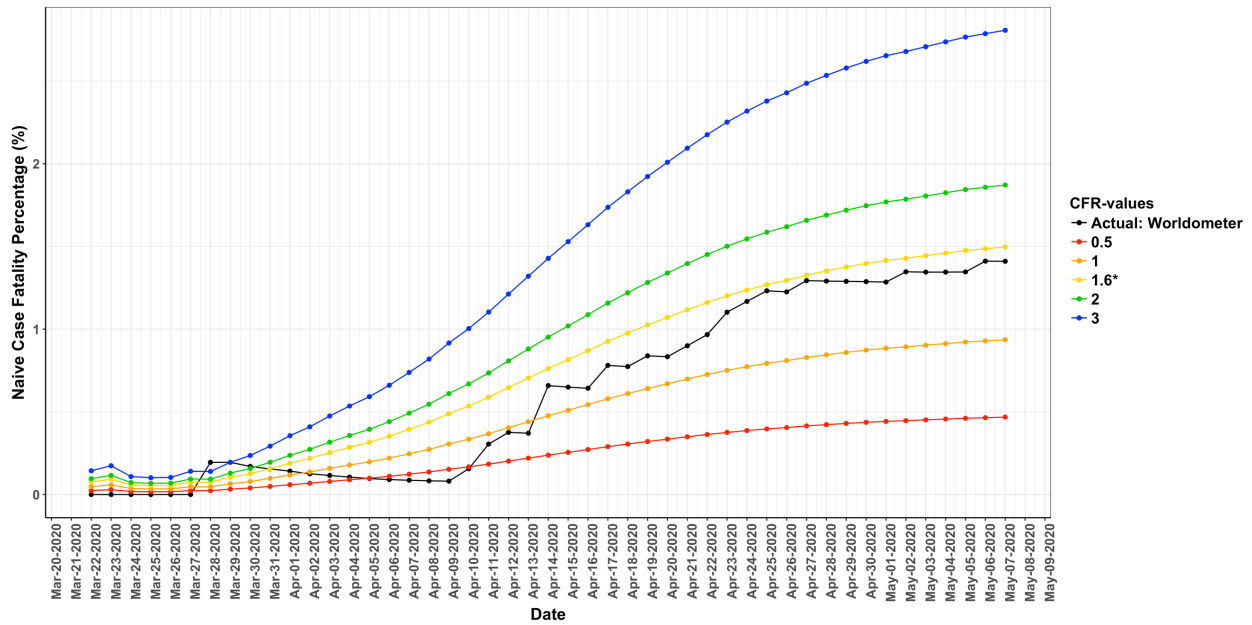

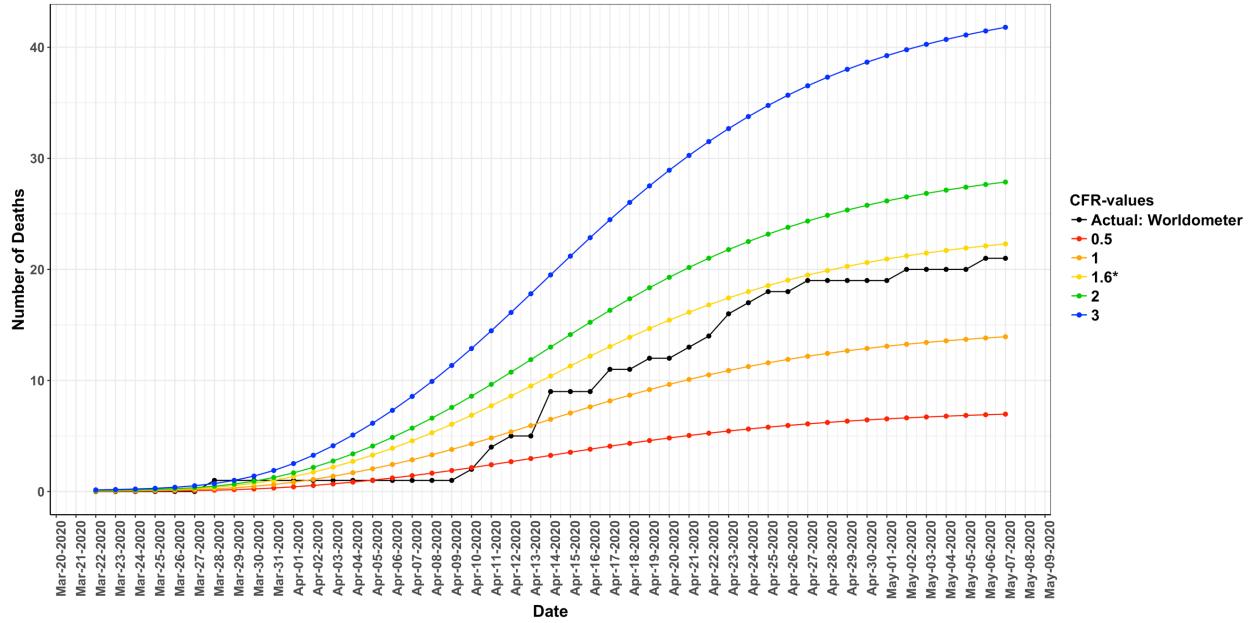

Figure 5. Simulated $nCFR(t)$ and $N_D(t)$ curves for New Zealand. The simulated curves shown were calculated using a corrected CFR of 0.50, 1.0, 1.6 (the closed case $nCFR$), 2.0, and 3.0. The reported data is shown in black.

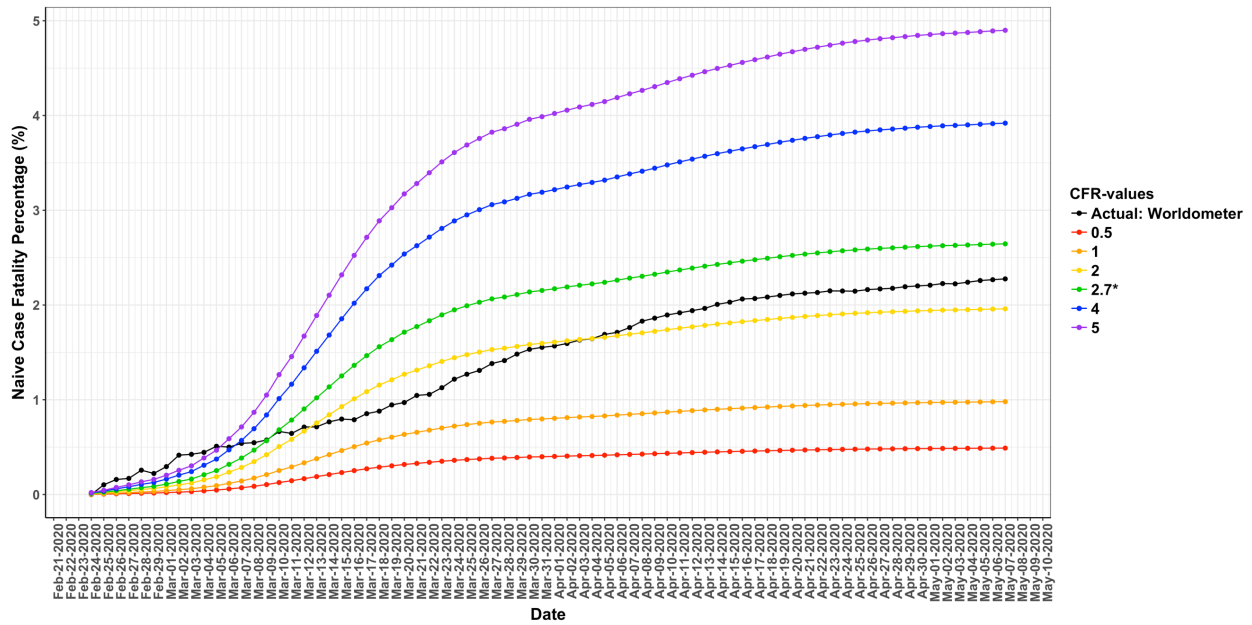

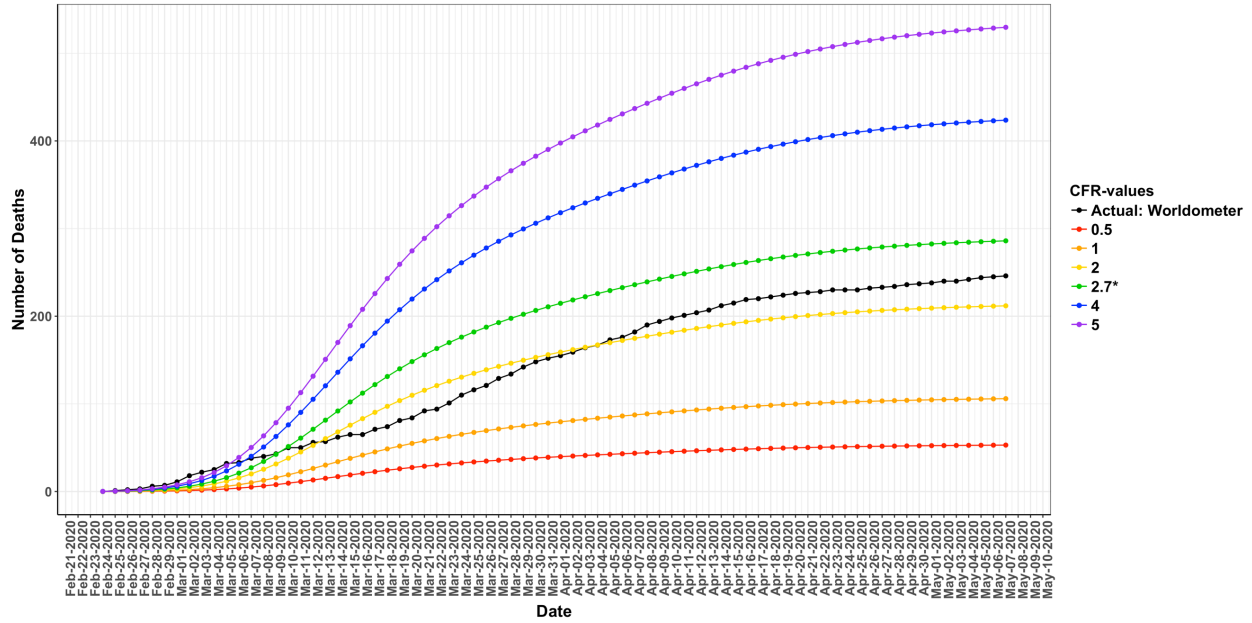

Figure 6. Simulated $nCFR(t)$ and $N_D(t)$ curves for South Korea. The simulated curves shown were calculated using a corrected CFR of 0.50, 1.0, 2.0, 2.5 (the closed case $nCFR$), 4.0, and 5.0. The reported data is shown in black.
