Biomarkers levels of anemia and iron metabolism in Coronavirus disease 2019: A systematic review and meta-analysis

Supplemental figure S1. Meta-analysis of mean hemoglobin levels in COVID-19 patients

Supplemental figure S2. Meta-analysis of differences in mean hemoglobin(a) and feritin (b) levels between severe and moderate COVID-19 patients

a

b

Supplemental figure S3. Meta-analysis of differences in mean hemoglobin (a) and ferritin (b) levels between deceased and COVID-19 patients who survived

a

b

Supplemental figure S4. Meta-analysis of mean ferritin levels in COVID-19 adult and pediatric patients, and in adult only.

Supplemental figure S5. Bubble plots on mean hemoglobin levels by age, percentage of patients survived, percentage of male population, percentage of patients at intensive care, percentage of patients with cardiovascular diseases, hypertension and type 2 diabetes

Supplemental figure S6. Bubble plots on weighted mean difference in hemoglobin levels between severe vs moderate Covid-19 cases by age, percentage of male population, percentage of patients at intensive care

Supplemental figure S7. Bubble plots on mean ferritin levels by age and percentage of male patients overall (a) and including paediatric population (b), mean percentage of patients with hypertension (c) mean ferritin levels by mean haemoglobin levels (d)
