1. AMA-1 hemi-nested PCR protocol for amplicon deep-sequencing

Primer	Sequence (5'→3')
Ama1OF	GCTGAAGTAGCTGGAACCTCAA
Ama1F+a*	acactcttccctacacgacgtcttcgatct- CCATCAGGGAAATGTCCAGT
Ama1R+a	gtgactggaggttcagacgtgtcttccgatct- TTCCCTGCATGTCTTGAACA

*a = adapter

AMA1 Nested PCR Protocol

25µl Reaction

Reagent	Initial Concentration	Volume Added (µl)	Final Concentration
FastStart High Fidelity Buffer	10X with 18mM MgCl ₂	2.5	1X (1.8mM MgCl ₂)
dNTPs	10mM	0.5	200µM each dNTP
Roche High Fidelity Taq	5U / µl	0.25	2.5 U
Pf AMA1OF primer	10µM	0.5	167nM
Pf AMA1R primer	10µM	0.5	167nM
Template DNA	-	5	-
Water	-	15.75	-

Use same master mix protocol for Round 1 and Round 2, substituting “AMA1OF Primer” with “AMA1F-a”, “AMA1R primer” with “AMA1R-a primer” and “Template DNA” with “Round 1 PCR Product” in Round 2.

Cycling Conditions

1st round PCR

Cycling Conditions R1	Temperature	Time
Step 1	95 C	2 min
Step 2	95 C	30 sec
Step 3	55 C	30 sec
Step 4	72 C	1 min
Step 5	Repeat step 2-4 total 20X	
Step 6	72 C	10 min
Step 7	4 C or 12 C	forever

2nd round PCR

Cycling Conditions R2	Temperature	Time
Step 1	95 C	2 min
Step 2	95 C	30 sec
Step 3	55 C	30 sec
Step 4	72 C	1 min
Step 5	Repeat step 2-4 total 10X, 20X, or 25X*	
Step 6	72 C	10 min
Step 7	4 C or 12 C	forever

*10X for samples with parasite density between 10,000 and 1,000 parasites/ μ L

20X for samples with parasite density between 1,000 and 10 parasites/ μ L

25X for samples with parasite density between 10 and 0.1 parasites/ μ L

INDEXING PCR

50 μ L reaction

Reagent	Volume Added (ul)
NEBNext MasterMix	25 μ L
Sample (2 nd round PCR product)	15 μ L
Barcode	10 μ L

Temperature	Time	Cycles
98 C	30 sec	
98 C	10 sec	8-22 cycles
65 C	75 sec	
65 C	5 min	
10 C	forever	

2. Figure 1: Bioinformatics workflow

3. Table 1. Detailed explanation of skip rule criteria

By clone:

- 1) "Skips" = dates on which haplotypes recovered from a genotyped sample did not include a clone seen previously in that individual, or where qPCR was negative
- 2) 4 skips in a row were required to call the infection with that clone cleared
- 3) If there were <= 3 skips and the same haplotype is detected again, infection with that clone is presumed to have continued throughout the dates of the skips
- 4) If there were 4 skips and the same haplotype was detected again, it was considered a new infection with that clone

By infection event:

- 1) "Skips" = dates on which haplotypes recovered from a genotyped sample did not include any of the haplotypes included in an infection event, or where qPCR was negative
- 2) 4 skips in a row were required to call the infection event cleared
- 3) If there were <= 3 skips and any haplotype from the same infection event was detected again, that infection event is presumed to have continued throughout the dates of the skips
- 4) If there were 4 skips and haplotypes from a previous infection event were detected again, it was considered a new infection event

4. Table 2. Haplotype sequences and frequencies

Consensus Haplotype Sequence	Read Percent	Sample Percent	Haplotype Percent

Read Percent: total number of reads that are associated with the haplotype across all samples divided by the total number of reads in the experiment, multiplied by 100

Sample Percent: number of samples the haplotype was found in divided by the number of samples in the experiment (sums to greater than 100%, since multiple haplotypes can be found in same sample), multiplied by 100

Haplotype Percent: sum of the number of times a haplotype was recovered over total number of haplotypes recovered, multiplied by 100
