

Table S1. Suspected respiratory illness criteria.

Respiratory illness is defined as any mention of the following words or combinations of words in the chief complaint field*:
<ul style="list-style-type: none">• Bronchitis• Pneumonia (and common misspellings)• Shortness of breath AND Fever/Febrile• Shortness of breath AND Cough/Croup• Wheezing• Respiratory• Fever (including temperature, fever, febrile)• Cough/Croup AND Fever/Febrile• COVID-19• Influenza/Flu
To ensure we do not categorize events as respiratory that have similar spellings/mentions of these words in the chief complaint field, we exclude the following:
<ul style="list-style-type: none">• Tempo, Templ, Tempt, Attemp, Low, Dec, Temporal• Aspiration• Fluid, flutter, reflux, flush, fluctuating, hydrofluoric, foreign body• Stomach, vomit, diarrhea, nausea, abd, bili, inability, bladder, whoop, UTI, urinary, urin, sepsis, facility, shot, immuniz, ear, eye, allerg, abscess
*Symptoms that may be associated with a respiratory cause (e.g. COVID-19, influenza-like illnesses, or other respiratory diseases), but could have other etiologies, such as shortness of breath, were only considered respiratory if the chief complaint additionally mentioned fever or cough.

Table S2. Temporal trends in ED visits within each time period between 2018 through 2020 in Marin County, California.

	Time Periods				
	Jan 1-Mar 2	Mar 3-16	Mar 17-31	April 1-14	April 15-May 4
ED visits, trend [†]					
2018	-0.15	-0.29	0.57*	-0.13	0.04
2019	0.07	0.31	-0.04	-0.49*	0.48*
2020	-0.10	-0.51*	-0.61*	0.09	0.47*
Respiratory ED visits, trend					
2018	-0.33*	-0.29	0.22	-0.05	-0.17
2019	0.09	0.08	-0.20	-0.20	0.38*
2020	0.11	0.00	-0.47*	-0.54*	0.14
Non-respiratory ED visits, trend					
2018	-0.09	-0.27	0.54*	-0.04	0.10
2019	0.06	0.31	0.09	-0.48*	0.46*
2020	-0.12	-0.54*	-0.52*	0.15	0.45*

*p<0.05
