	Item No	Recommendation	Page No
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the	3
		abstract	
		(b) Provide in the abstract an informative and balanced summary of what	3
		was done and what was found	
Introduction			
Background/rationale	2	Explain the scientific background and rationale for the investigation being	5
		reported	
Objectives	3	State specific objectives, including any prespecified hypotheses	6, 10
Methods			
Study design	4	Present key elements of study design early in the paper	6
Setting	5	Describe the setting, locations, and relevant dates, including periods of	6
		recruitment, exposure, follow-up, and data collection	
Participants	6	(a) Cohort study—Give the eligibility criteria, and the sources and methods	6, 7
		of selection of participants. Describe methods of follow-up	
		Case-control study—Give the eligibility criteria, and the sources and	
		methods of case ascertainment and control selection. Give the rationale for	
		the choice of cases and controls	
		Cross-sectional study—Give the eligibility criteria, and the sources and	
		methods of selection of participants	
		(b)Cohort study—For matched studies, give matching criteria and number of	-
		exposed and unexposed	
		<i>Case-control study</i> —For matched studies, give matching criteria and the	
Variables	7	number of controls per case	8.9
Variables	7	number of controls per case Clearly define all outcomes, exposures, predictors, potential confounders,	8,9
		number of controls per case Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	
Data	7 8*	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of	8,9 8, 9
		number of controls per case Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if	
Data sources/measurement	8*	number of controls per case Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	8,9
Data sources/measurement Bias	8*	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of bias	8, 9 8
Data sources/measurement Bias Study size	8* 9 10	number of controls per case Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group Describe any efforts to address potential sources of bias Explain how the study size was arrived at	8, 9 8 8 8
Data sources/measurement Bias	8*	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If	8, 9 8
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	8, 9 8 8 8 8, 9
Data sources/measurement Bias Study size	8* 9 10	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for	8, 9 8 8 8
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for confounding	8, 9 8 8 8 8, 9 10
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for confounding(b) Describe any methods used to examine subgroups and interactions	8, 9 8 8 8 8, 9 10 10
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for confounding(b) Describe any methods used to examine subgroups and interactions(c) Explain how missing data were addressed	8, 9 8 8 8 8, 9 10
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for confounding(b) Describe any methods used to examine subgroups and interactions(c) Explain how missing data were addressed(d) Cohort study—If applicable, explain how loss to follow-up was	8, 9 8 8 8 8, 9 10 10
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one groupDescribe any efforts to address potential sources of biasExplain how the study size was arrived atExplain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for confounding(b) Describe any methods used to examine subgroups and interactions(c) Explain how missing data were addressed(d) Cohort study—If applicable, explain how loss to follow-up was addressed	8, 9 8 8 8, 9 10 10
Data sources/measurement Bias Study size Quantitative variables	8* 9 10 11	number of controls per caseClearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicableFor each variable of interest, give sources of data and details of methods of assessment (measurement). If applicable, describe which groupings were chosen and why(a) Describe all statistical methods, including those used to control for confounding(b) Describe any methods used to examine subgroups and interactions(c) Explain how missing data were addressed(d) Cohort study—If applicable, explain how matching of cases and	8, 9 8 8 8, 9 10 10

## STROBE Statement—checklist of items that should be included in reports of observational studies

Results			
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	10
		(b) Give reasons for non-participation at each stage	10
		(c) Consider use of a flow diagram	-
Descriptive	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and	10,
data		information on exposures and potential confounders	Table 2
		(b) Indicate number of participants with missing data for each variable of interest	Table 2
		(c) <i>Cohort study</i> —Summarise follow-up time (eg, average and total amount)	-
Outcome data	15*	Cohort study—Report numbers of outcome events or summary measures over time	-
		Case-control study—Report numbers in each exposure category, or summary	-
		measures of exposure	
		Cross-sectional study-Report numbers of outcome events or summary measures	11,
			Tables
			3 & 4
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and	12,
		their precision (eg, 95% confidence interval). Make clear which confounders were	Table 5
		adjusted for and why they were included	
		(b) Report category boundaries when continuous variables were categorized	10
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a	-
		meaningful time period	
Other analyses	17	Report other analyses done-eg analyses of subgroups and interactions, and	-
		sensitivity analyses	
Discussion			-
Key results	18	Summarise key results with reference to study objectives	12,
			Table 5
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or	14
		imprecision. Discuss both direction and magnitude of any potential bias	
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations,	12,13
		multiplicity of analyses, results from similar studies, and other relevant evidence	& 14
Generalisability	21	Discuss the generalisability (external validity) of the study results	14
Other information	on		
Funding	22	Give the source of funding and the role of the funders for the present study and, if	16
-		applicable, for the original study on which the present article is based	

\*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at <a href="http://www.annals.org/">http://www.annals.org/</a>, and Epidemiology at <a href="http://www.epidem.com/">http://www.epidem.com/</a>). Information on the STROBE Initiative is available at <a href="http://www.strobe-statement.org">www.strobe-statement.org</a>.
