Supplementary Figure 1. Pooled mean duration (days) of MERS-CoV shedding from the upper respiratory tract (random-effects model).

Study name		Statistic		Mean and 95% CI						
	Mean	Standard error	Variance	• •	Lower limit	Total				
Al-Jasser et al.	13.2	0.4	0.2	14.0	12.3	249				
Alkendi et al.	18.5	1.1	1.2	20.7	16.3	58				
Park et al.	14.3	1.8	3.2	17.7	10.8	17				
	15.3	1.9	3.6	19.0	11.6	324				

Note: the overall effect is plotted as a black square.

Test for heterogeneity: Q-value = 19.9, df(Q) = 2, p < 0.001, I2 = 89.9%.

Supplementary Figure 2 Pooled mean duration (days) of MERS-CoV shedding from the lower respiratory tract (random-effects model).

Study name		Statisti	cs for each	study		Mean and 95% CI	
	Mean	Standard error	Variance	Lower limit	Upper limit		Relative weight
Hong et al.	19,5	1,5	2,3	16,5	22,5	🐞	35,55
Min et al.	14,3	2,3	5,1	9,8	18,7	-	15,97
Park et al.	15,3	2,3	5,3	10,8	19,7	<del>   </del>	15,62
Shalhoub et al.	15,3	1,6	2,5	12,1	18,4	<b>=</b>	32,85
	16,6	0,9	8,0	14,8	18,4	■	

Note: the overall effect is plotted as a black square.

Test for heterogeneity: Q-value = 5,8, df(Q) = 3, p = 0.132,  $l^2 = 48\%$ .

Supplementary Figure 3. Meta-regression bubble plot of the impact of male proportion on mean SARS-CoV-2 shedding from the upper respiratory tract

Regression of Mean (Days of viral shedding of SARS-CoV-2 from URT) on Gender, Male %

URT: upper respiratory tract.

Note: the plot was built upon 41 observations (no data on mean age from the study of Qian et al.). A random-effects model was used.

Supplementary Figure 4. Meta-regression bubble plot of the impact of age on mean SARS-CoV-2 shedding from the stool

Regression of Mean (Days of viral shedding in stool in SARS-CoV-2 infection) on Mean Age

Note: the plot was built upon 13 studies. A random-effects model was used.

(slope: +0.087; 95% CI, -0.128 to +0.302; p = 0.43)

# Critical Appraisal case series

SARS-CoV-2

	inclusion in	condition measured in	identification of the condition for all	case series have consecutive	case series have complete inclusion of	clear reporting of the demographic		8. Were the outcomes or follow up results of cases clearly reported?	9. Was there clear reporting of the presenting site(s)/clinic(s) demographic information?	10. Was statistical analysis appropriate?

# Search strategy

**Research question:** What is the duration and dynamics of viral shedding in various body fluids in coronaviruses?

## Search methods:

The following databases will be searched: MEDLINE and EMBASE. For the following conferences we will hand search abstracts: European Congress of Clinical Microbiology and Infectious Diseases (ECCMID). Additionally, if any literature reviews are identified, reference lists of those review articles will be searched.

**Time**: the search will be limited to literature published after 2003, since the first recognised case of SARS was identified in March 2003.

Language: only English language articles will be reviewed.

### Search terms:

- 1. nCoV or n-Cov
- 2. 2019-nCoV
- 3. coronavirus disease 2019
- 4. coronavirus disease-19
- 5. novel coronavirus
- 6. COVID
- 7. COVID-19
- 8. Middle East Respiratory Syndrome Coronavirus/
- 9. Middle East respiratory syndrome
- 10. MERS
- 11. SARS Virus/
- **12. SARS**
- 13. severe acute respiratory syndrome
- 14.1 or 2 or 3 or 4 or 5 or 6 or 7 or 8 or 9 or 10 or 11 or 12 or 13
- 15. shed\* OR viabl\*
- 16. viral OR virus OR rna OR ribonucleic
- 17. viral shedding
- 18.15 or 16 or 17
- 19.14 AND 18
