

## Supplementary Materials

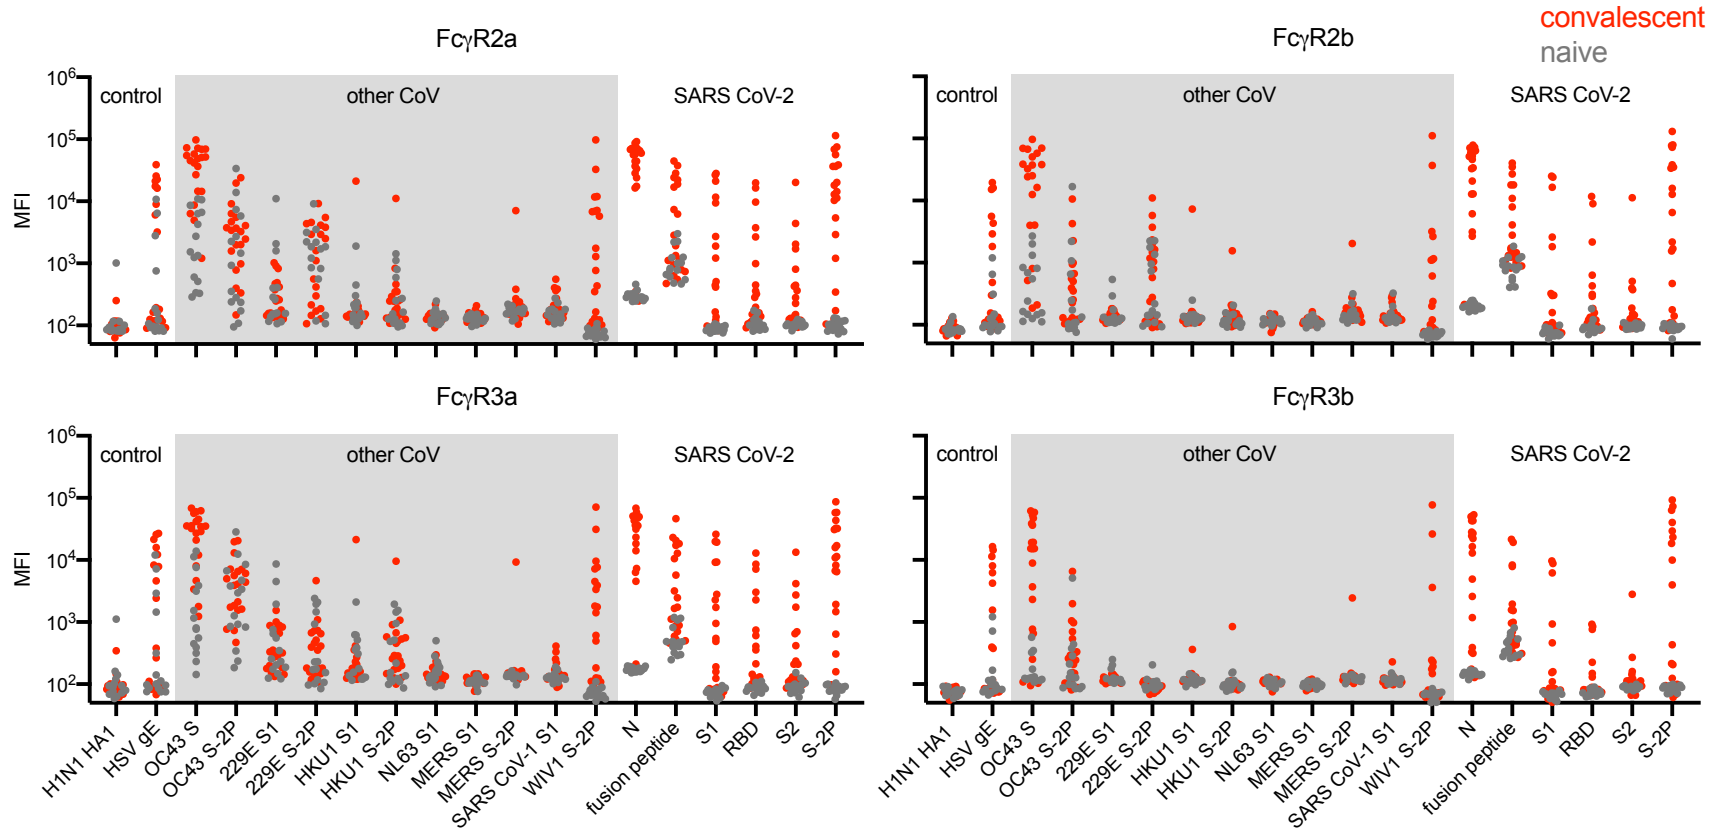

<b>Supplementary Figures</b>	
Supplementary Figure 1	Serum IgG isotype and subclass responses across CoV and control antigen types.
Supplementary Figure 2	Serum IgA, D, and M isotype and subclass responses across CoV and control antigen types.
Supplementary Figure 3	Serum Fc $\gamma$ R binding responses across antibodies specific to CoV and control antigen types.
Supplementary Figure 4	Nasal IgG isotype and subclass responses across CoV and control antigen types.
Supplementary Figure 5	Nasal IgA, D, and M isotype and subclass responses across CoV and control antigen types.
Supplementary Figure 6	Nasal Fc $\gamma$ R binding responses across antibodies specific to CoV and control antigen types.
Supplementary Figure 7	Stool IgA and IgG responses across CoV and control antigen types
Supplementary Figure 8	Differences in Ab responses observed between naïve and convalescent donors
Supplementary Figure 9	Complete serum Ab Fc Array profiles
Supplementary Figure 10	Complete nasal wash Ab Fc Array profiles
Supplementary Figure 11	Differences in Ab responses among convalescent donors by subject characteristics
Supplementary Figure 12	Heatmap of serum Ab features that differ between donors who experienced severe versus non-severe disease
<b>Supplementary Tables</b>	
Supplementary Table 1	Fc Array Reagents
Supplementary Table 2	CoV Antigen Sequences
Supplementary Table 3	Sample Dilutions in the Fc Array Assay

**Supplementary Figure 1.** Serum IgG isotype and subclass responses across CoV and control antigen types.

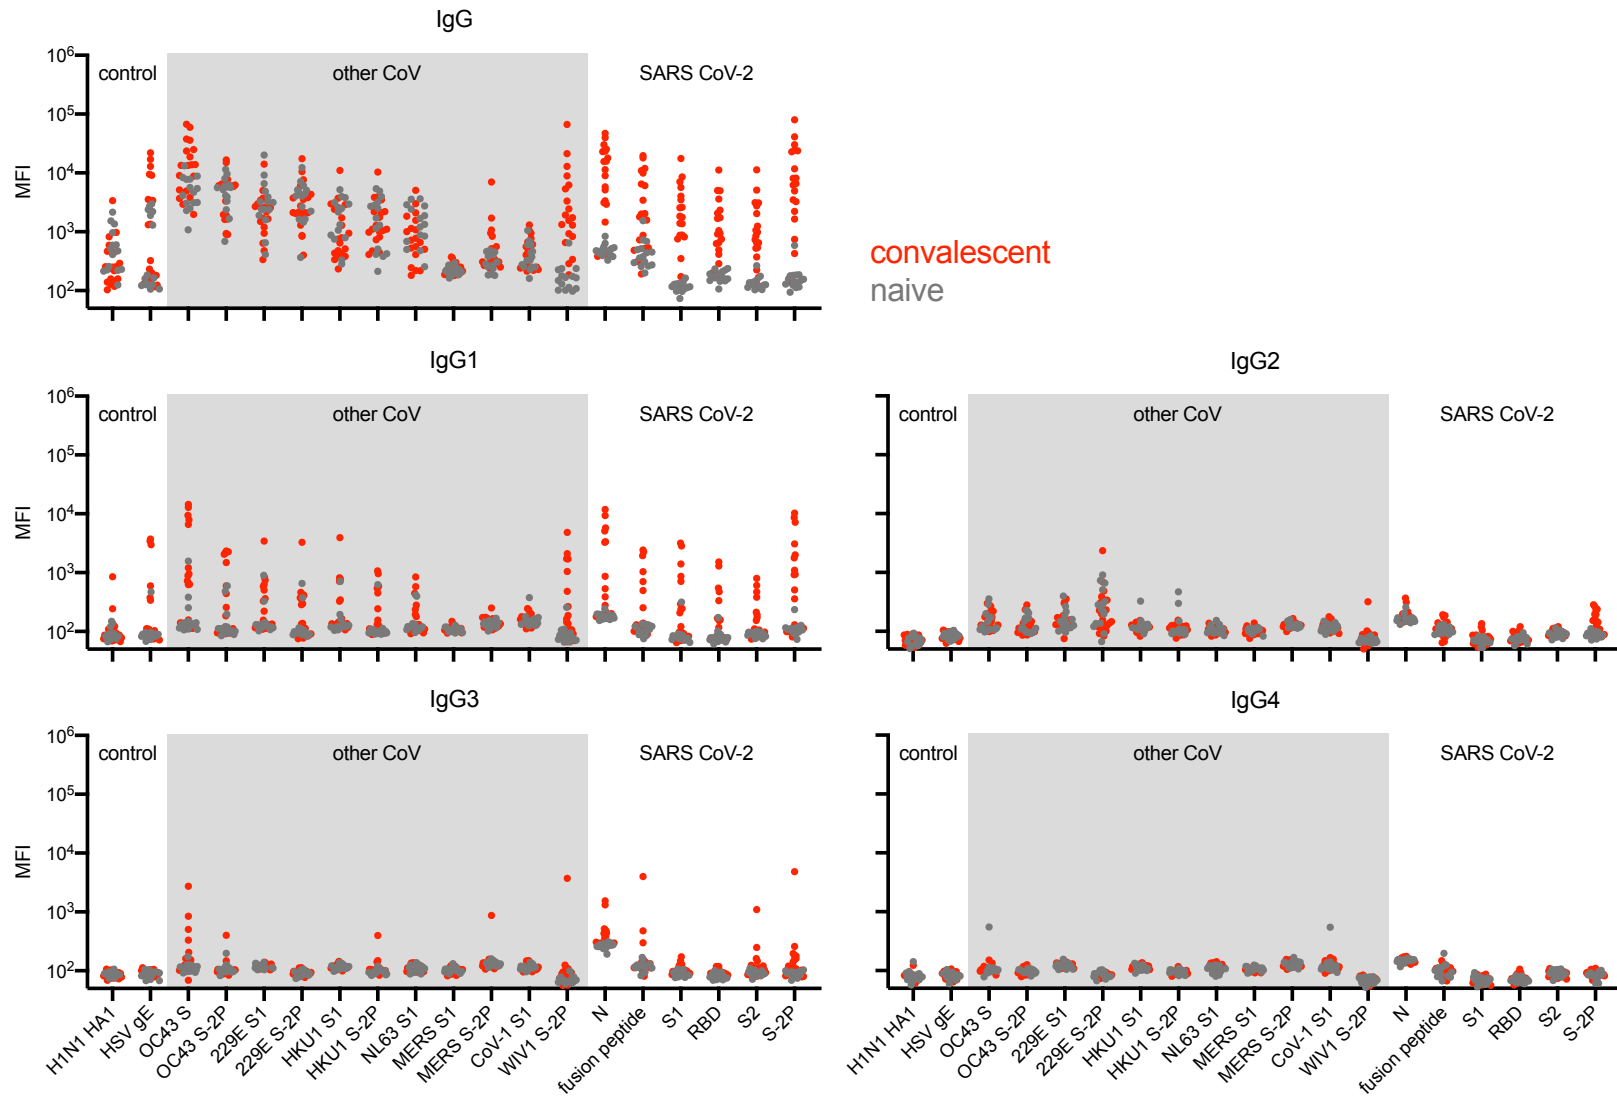

**Supplementary Figure 2.** Serum IgA, D, and M isotype and subclass responses across CoV and control antigen types.

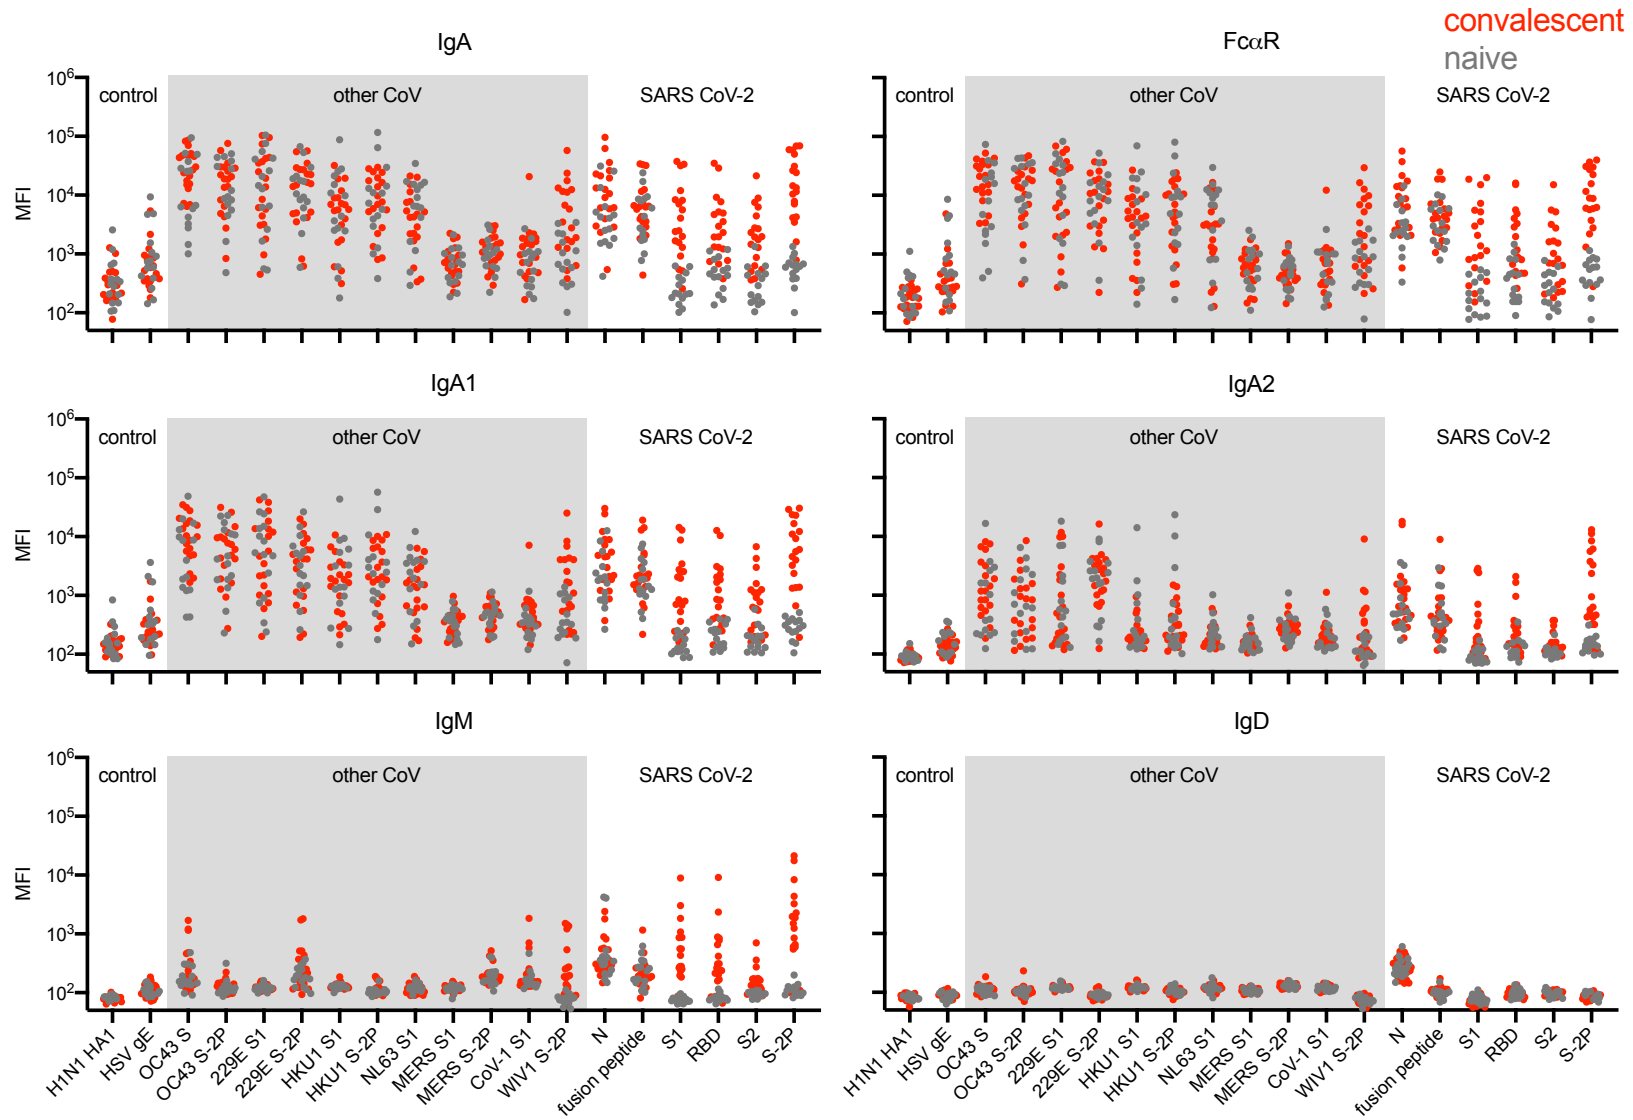

**Supplementary Figure 3.** Serum Fc $\gamma$ R binding responses across antibodies specific to CoV and control antigen types.

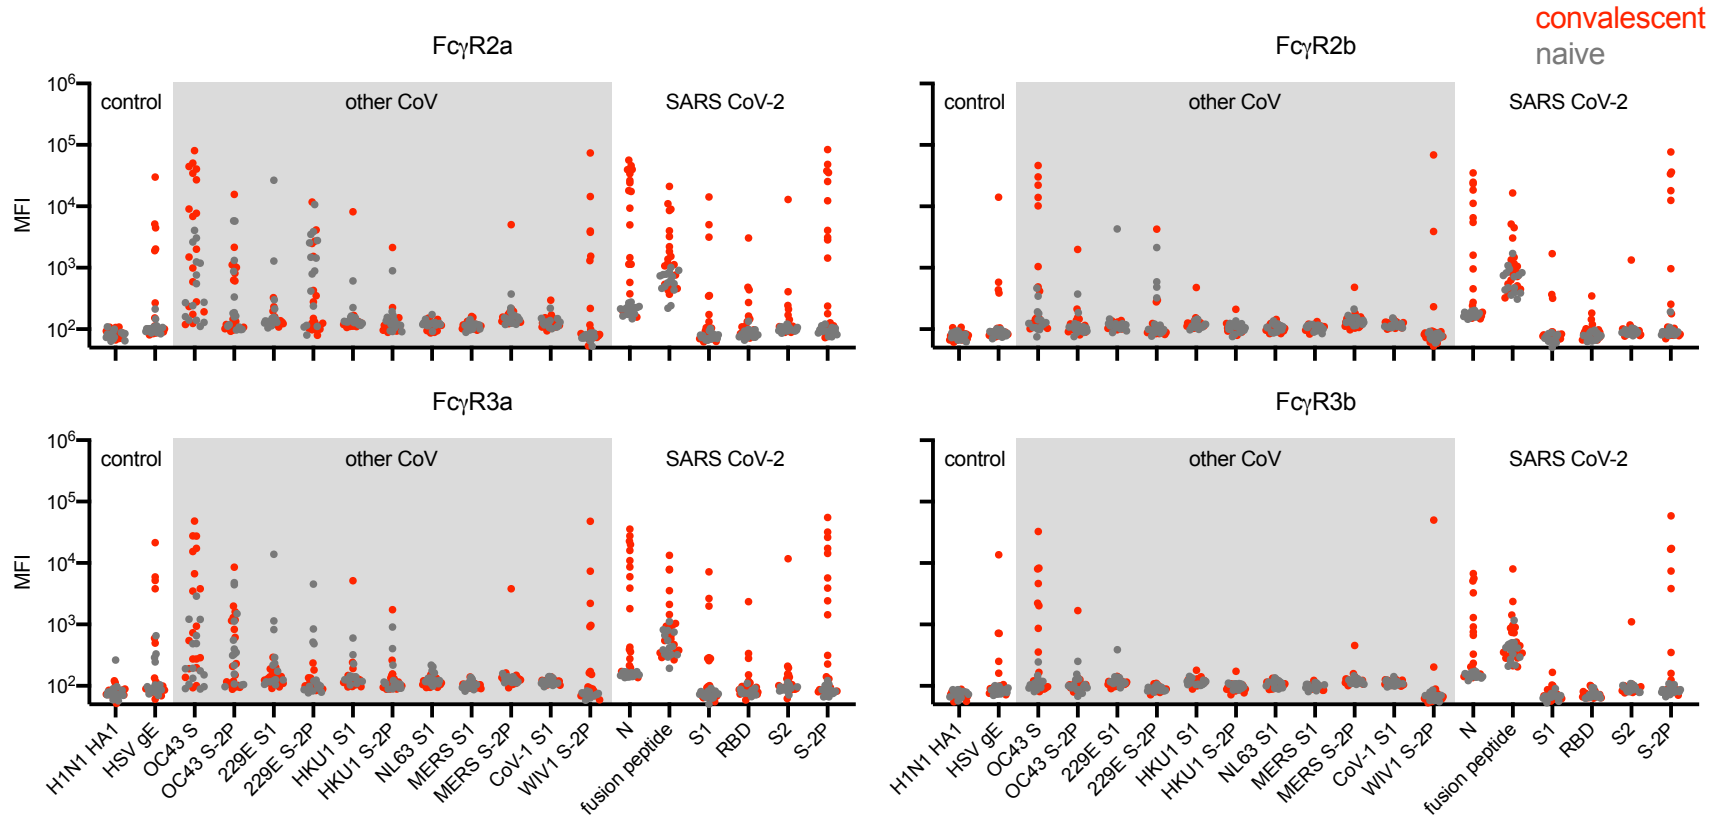

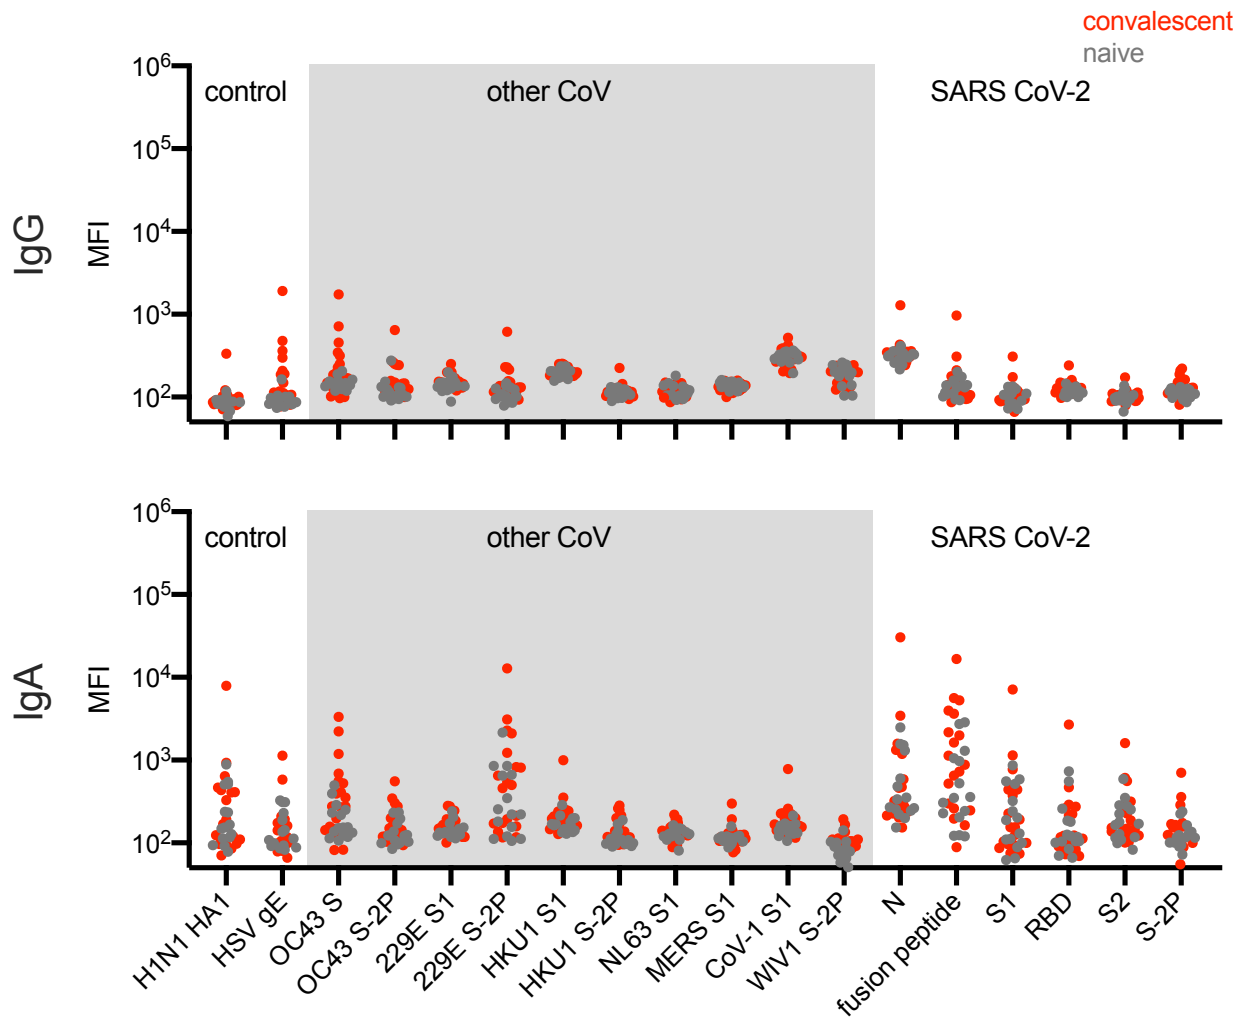

**Supplementary Figure 4.** Nasal IgG isotype and subclass responses across CoV and control antigen types.

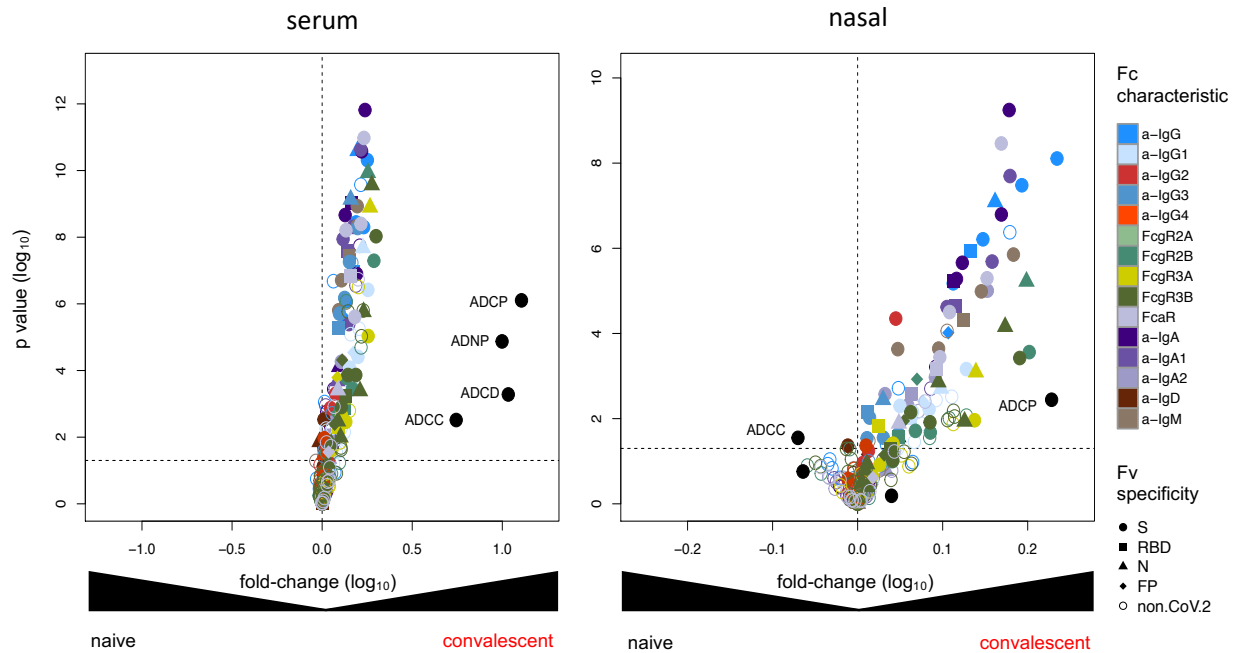

**Supplementary Figure 5.** Nasal IgA, D, and M isotype and subclass responses across CoV and control antigen types.

**Supplementary Figure 6.** Nasal FcγR binding responses across antibodies specific to CoV and control antigen types.

**Supplementary Figure 7.** Stool IgG and IgA responses across CoV and control antigen types.

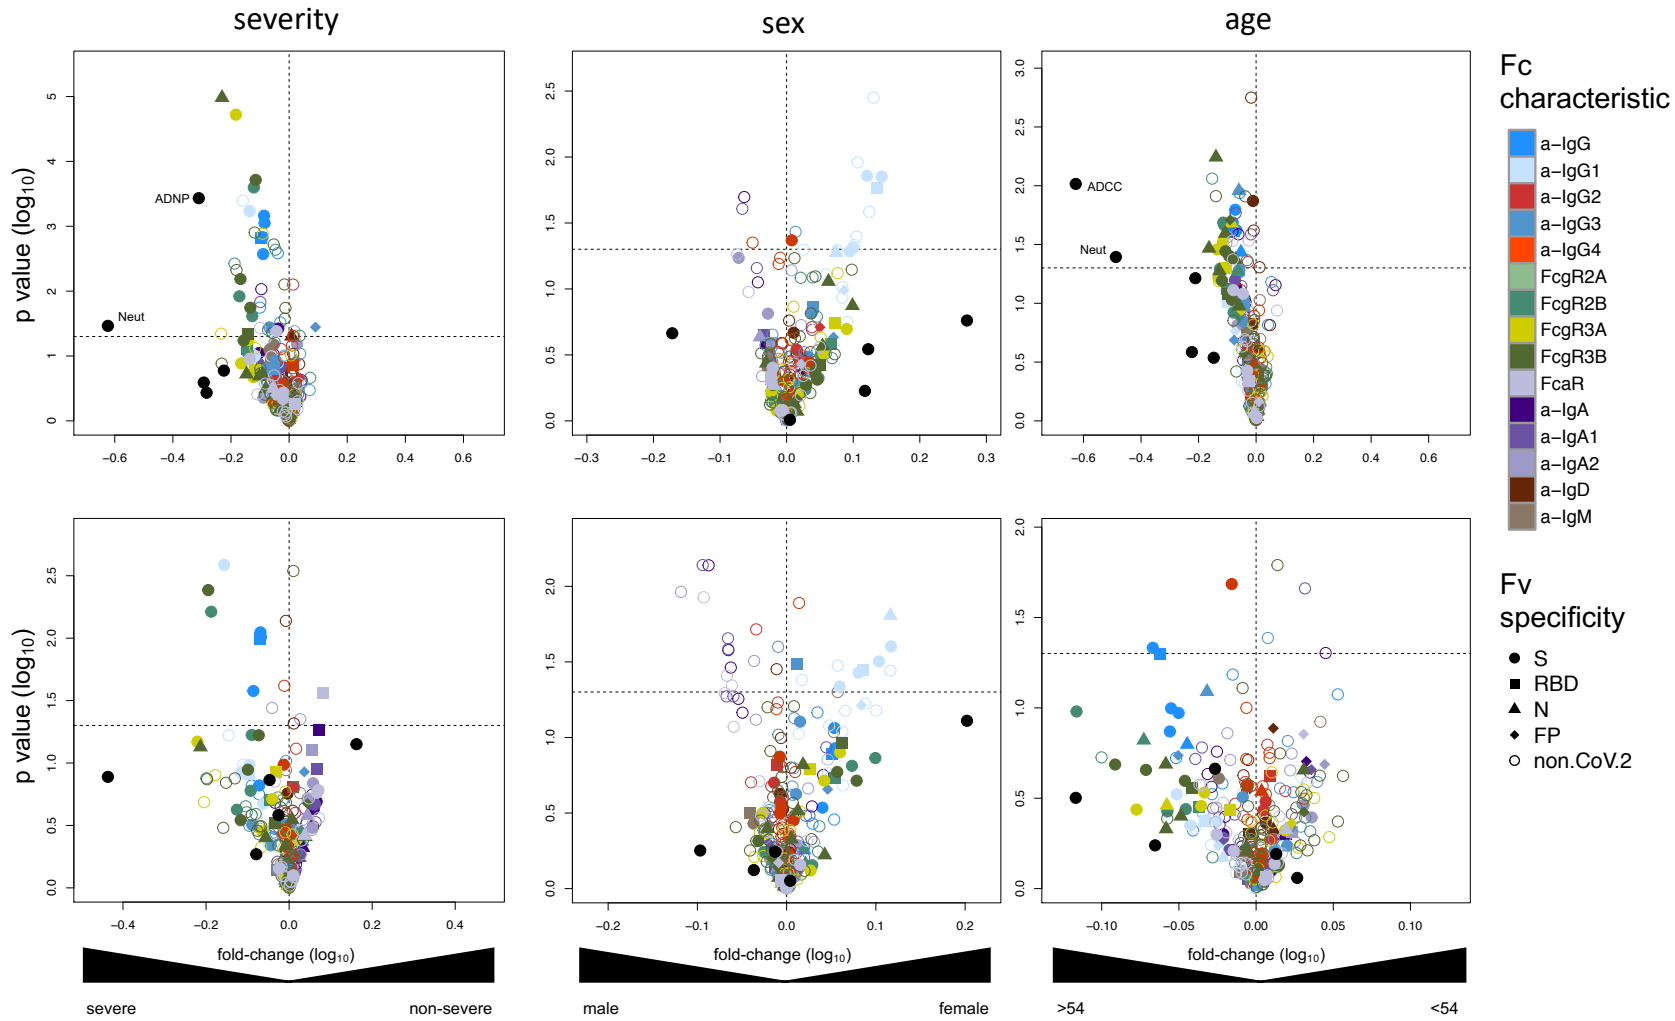

**Supplementary Figure 8. Differences in Ab responses observed between naïve and convalescent donors.** Volcano plots depicting fold-change and unadjusted statistical significance (unpaired two-tailed t test with Welch’s correction) of biophysical and functional response features in serum (left) and nasal wash (right) samples by infection status. Functional assay data is labeled by name and log-transformed Fc array data is depicted with antigen specificity indicated by shape and Fc characteristic indicated by color. Dotted horizontal line indicates  $p = 0.05$ .

**Supplementary Figure 9. Complete Serum Ab Fc Array Profiles.** Heatmap of Fc array features in serum samples. Features are hierarchically-clustered with Fv specificity (viral antigen) and Fc characteristic (detection) indicated in x-axis color bar. Subjects are stratified by infection or disease severity status. Responses are centered and scaled per feature and the scale range truncated at  $\pm 3$  SD.

**Supplementary Figure 10. Complete Nasal Ab Fc Array Profiles.** Heatmap of Fc array features in nasal wash samples. Features are hierarchically-clustered with Fv specificity (viral antigen) and Fc characteristic (detection) indicated in x-axis color bar. Subjects are stratified by infection or disease severity status. Responses are centered and scaled per feature and the scale range truncated at  $\pm 3$  SD. Gray cells indicate missing data.

**Supplementary Figure 11. Differences in Ab responses among convalescent donors by subject characteristics.** Volcano plots depicting fold-change and unadjusted statistical significance (unpaired two-tailed t test with Welch's correction) of biophysical and functional response features in serum (top) and nasal wash (bottom) samples by disease severity (left), sex (center), and age (right). Functional assay data is labeled by a black circle with the assay name added if  $p < 0.05$ , and Fc array data is depicted with antigen specificity indicated by shape and Fc characteristic indicated by color. Dotted horizontal line indicates  $p = 0.05$ .

**Supplementary Figure 12. Heatmap of serum Ab features that differ between donors who experienced severe versus non-severe disease.** Features and subjects are hierarchically-clustered with Fv specificity (viral antigen) and Fc characteristic (detection) indicated in x-axis color bar. Subjects are stratified by infection or disease severity status. Responses are centered and scaled per feature and the scale range truncated at +2/-1 SD. Black cell indicates missing data.
