

12 Table S1: *P. vivax* proteins used in this study. Proteins were selected based on our previously validation study as being able to accurately  
 13 classify individuals as infected with *P. vivax* in the last 9-months when using IgG antibody responses, either individually or in combination [1].  
 14 References listed are for the protein production and purification method. Protein ID and annotations are from PlasmoDB (release 36  
 15 <http://plasmodb.org/plasmo/>) or GenBank. Where the protein ID has an A or B, it is used to match exactly to the proteins listed in our validation  
 16 manuscript. The Short Code listed is in reference to our original manuscript [1].

Protein ID	Short Code	Gene Annotation	Protein length, aa	Construct, aa (size)	Expression System	Purification Method
PVX_099980	W01	merozoite surface protein 1 (MSP1-19)	1751	1622-1729 (108)	WGCF	One-step Ni column
