Table S2: Newcastle-Ottawa Quality Assessment Scale - Case-control studies

| Selection  |  |  |
|--|--|--|
| 1. Is the case definition adequate?                    | A. yes, with independent validation              | ☆  |
|  | B. yes, eg record linkage or based on self-      |  |
|  | reports  |  |
|  | C. no description                                |  |
| 2. Representativeness of the cases                     | A. consecutive or obviously representative       | $\stackrel{\scriptstyle \leftarrow}{\sim}$ |
|  | series of cases                                  |  |
|  | B. potential for selection biases or not stated  |  |
| 3. Selection of Controls                               | A. community controls                            | $\stackrel{\sim}{\sim}$                    |
|  | B. hospital controls                             |  |
|  | C. no description                                |  |
| 4. Definition of Controls                              | A. no history of disease (endpoint)              | ☆  |
|  | B. no description of source                      |  |
| Comparability  |  |  |
| 1. Comparability of cases and                          | A. study controls for                            | $\stackrel{\wedge}{\sim}$                  |
| controls on the basis of the design                    | (Select the most important factor.)              |  |
| or analysis  | B. study controls for any additional factor      | $\stackrel{\wedge}{\sim}$                  |
|  | (This criteria could be modified to indicate     |  |
|  | specific control for a second important factor.) |  |
| Exposure   |  |  |
| 1. Ascertainment of exposure                           | A. secure record (eg surgical records)           | $\stackrel{\sim}{\sim}$                    |
|  | B. structured interview where blind to           | $\stackrel{\wedge}{\sim}$                  |
|  | case/control status                              |  |
|  | C. interview not blinded to case/control status  |  |
|  | D. written self-report or medical record only    |  |
|  | E. no description                                |  |
| 2. Same method of ascertainment for cases and controls | A. yes   | ☆  |
| TOT CASES ATTA COTTUDES                                | B. no  |  |
| 3. Non-Response rate                                   | A. same rate for both groups                     | ☆  |
|  | B. non respondents described                     |  |
|  | C. rate different and no designation             |  |

Note: A study can be awarded a maximum of one star for each numbered item within the Selection and Exposure categories. A maximum of two stars can be given for Comparability.

Further explanations and manuals for the scale can be found at: <a href="http://www.ohri.ca/programs/clinical">http://www.ohri.ca/programs/clinical</a> epidemiology/oxford.asp

Table S2 (continued): Newcastle-Ottawa Quality Assessment Scale – Cohort studies

| Selection                            |   |                                      |
|--------------------------------------|---|--------------------------------------|
| 1. Representativeness of the         | A. truly representative of the average            | $\stackrel{\wedge}{\sim}$            |
| exposed cohort                       | (describe) in the community                       |                                      |
|                                      | B. somewhat representative of the average         | $\stackrel{\wedge}{\hookrightarrow}$ |
