Abbreviations:

Pseudo: pseudotime classification, MK: megakaryocytes, PB: plasmablasts, DC: dendritic cells. Samples nomenclature based on patient ID (001-014) and time points of sample collection (TA first sample collection, TA2 three days after first sample collection, TB eight days after first sample collection, TC fourteen days after first sample collection, TE and rec for samples collected in recovery stage). Healthy controls as H002, H004, H006, H012 and H013.
