## **Methods**

Highest parental educational qualification was derived by sourcing the earliest educational qualification available for each of the respondents' parents across the nine waves. The parent with the highest qualification was selected and used to provide the highest parental educational qualification. Where no parent qualification was available, self-reported parental education was used. Highest parental educational qualification was categorized into the following categories: Degree or equivalent, A levels or equivalent, GCSE or equivalent, No qualification, Other. When deciding the highest qualification, Other is listed where applicable except where a respondent also has a parent who has a degree or equivalent.

Ethnicity is a derived category with eighteen categories. In this analysis ethnicity was recategorized into six categories: White British, Other White, Mixed, Asian, Black, and Other.

GHQ questions include: "Have you recently been feeling unhappy or depressed?" and "Have you recently felt constantly under strain?", with response options including "Not at all", "No more than usual", "Rather more than usual" and "Much more than usual".

Table S1: Sample size and descriptive statistics for each Understanding Society wave and the pooled analysis.

	2010-11	2011-13	2012-14	2013-15	2014-16	2015-17	2016-18	2017-19	Pooled
